| Title: | The LANL Proton Radiography facility and velocimetry capabilities |
| Author(s): | D Tupa, B Hollander J ^ |
| Intended for: | 4th Annual PDV Workshop |

Los Alamos National Laboratory, an affirmative action/equal opportunity employer, is operated by the Los Alamos National Security, LLC for the National Nuclear Security Administration of the U.S. Department of Energy under contract DE-AC52-06NA25396. By acceptance of this article, the publisher recognizes that the U.S. Government retains a nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or to allow others to do so, for U.S. Government purposes. Los Alamos National Laboratory requests that the publisher identify this article as work performed under the auspices of the U.S. Department of Energy. Los Alamos National Laboratory strongly supports academic freedom and a researcher's right to publish; as an institution, however, the Laboratory does not endorse the viewpoint of a publication or guarantee its technical correctness.

The LANL Proton Radiography facility and velocimetry capabilities

Proton Radiography (pRad), invented at Los Alamos National laboratory, employs a high-energy proton beam to image the properties and behavior of materials driven by high explosives. We will discuss features of the LANL pRad facility and the capability to perform velocimetry measurements in conjunction with dynamic experiments there.
