IDEA ID NO. 856 – LOS ALAMOS NATIONAL LABORATORY (LANL)
SEMI-ANNUAL EMISSIONS REPORT – OPERATING PERMIT NUMBER: P100

Dear Mr. Horst:

Attached is the semi-annual emissions report for January through June of 2005. This report includes actual emissions from permitted sources included in section 2.0 of the Los Alamos National Laboratory (LANL) Operating Permit. This submission satisfies permit condition 4.1., which requires submission of a semi-annual emissions report on a 6-month basis. Furthermore, this report is submitted within 90 days from the end of the reporting period as stipulated in permit condition 4.3.

In this report, actual emissions are listed along with the emission limits for ease in comparing and verifying compliance. No annual emission limits were exceeded during this reporting period. Emissions are also reported from insignificant boiler and generator sources. These sources are included to demonstrate that LANL has not exceeded Prevention of Significant Deterioration (PSD) applicability thresholds.

A Construction Permit modification (NSR Permit 2195B-M1) was issued on July 30, 2004 to install a combustion turbine at the TA-3 power plant, but installation is not yet complete. This permit reduced the allowable emissions for the TA-3 power plant boilers. In addition, emissions from the data disintegrator, which replaced the paper shredder in 2004, are included in this report. The emission limits for this unit were taken from NSR Air Quality Permit 2195-H. Both of these changes were incorporated into the LANL Operating Permit modification application submitted in July of 2005.

Should you have any questions or comments regarding the information provided in this report, please contact Steve Story at (505) 665-2169.

Los Alamos National Laboratory
2005 Semi-Annual Emissions Report
(January through June)

This report is being provided to meet the requirement set forth in permit condition 4.1 of the Los Alamos National Laboratory (LANL) Operating Permit Number P100. The emissions included in this report were calculated using operating data recorded during the first six months of 2005.

Facility Emissions

The following table displays the actual facility-wide emissions compared with the Facility Wide Emission Limits specified in permit condition 2.11 of the Operating Permit. These emissions include insignificant sources, which are included to demonstrate that facility-wide emissions are below all PSD applicability threshold limits. Also, due to the method used for calculating Hazardous Air Pollutant (HAP) and Volitile Organic Compound (VOC) emissions from chemical use, fugitive emissions are included (see permit condition 4.1).

Pollutant	January - June Emissions (tons)	July - December Emissions (tons)	2005 Annual Emissions (tons)
Nitrogen Oxides (NOx)	27.8		
Carbon Monoxide (CO)	19.6		
Volatile Organic Compounds (VOCs)	8.0		
Sulfur Dioxide (SO_2)	0.9		
Particulate Matter (PM)	2.8		
Hazardous Air Pollutants (HAPs)	4.3		
Jan-June Highest Individual HAP (Hydrochloric Acid)	0.7

Source Emissions

The following are the actual emissions from permitted sources listed in permit condition 2.0 of the operating permit for the six month reporting period. Included with these emissions are the source specific emission limits if applicable.

Permit Condition/Source

2.1 Asphalt Production - Asphalt Plant located at TA-60

Pollutant	Jan-June Emissions (tons)	July-Dec Emissions (tons)	Annual Emissions (tons)	[redacted]
NOx	0.0

CO	0.0			
VOC	0.0			
HAPs	0.0			

Note: The Asphalt Plant did not operate during the first 6 months of 2005.

* The Asphal Plant does not have a tons per year limit for PM. The lb/hr emissions will be demonstrated during the initial source compliance test.

The revised Title V permit has not been issued and therefore, the limits shown here reflect the permit limits in the original Title V permit. However, all emissions from the power plant boilers are in compliance with the emission limits in Permit 2195B-M1.
