Subject: Request to Defer Armoring of the Stilling Basin in Upper Sandia Canyon

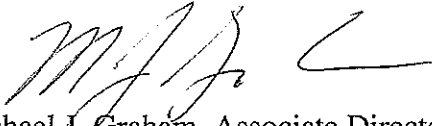

Dear Mr. Kieling:

This letter requests a deferral from the requirement to harden a stilling basin at the head of the wetland in Sandia Canyon. The September 29, 2011, Work Plan and Final Design for Stabilization of the Sandia Canyon Wetland (the work plan) proposed to armor the existing stilling basin below the 72-in. culvert at the head of the Sandia Canyon wetland to ensure its stability. At the time the work plan was submitted, it was believed that a nearby grade cut through bedrock to install a sewer line would allow access to this area and the existing pool below the 72-in. culvert. Since then, a more detailed evaluation of this approach has indicated the sewer-line grade cut cannot be used as an access road because of potential impacts to the buried line.

Therefore, an alternate route that runs downcanyon of the wetland has been planned to access the Sandia Canyon wetland. Construction of the access road to the location of the planned grade-control structure (GCS) at the east end of the wetland is currently planned for early spring 2012. However, an extension of the GCS road farther to the west through the canyon is also impractical to access the head of the wetland because it may cause more harm than any benefit gained by armoring the stilling basin. The U.S. Department of Energy and Los Alamos National Security (LANS), LLC, request that rather than armor the stilling basin at this time, the geomorphic surveying requirement in the work plan will be extended to include multiple surveys of the existing stilling basin configuration to document potential changes in the current configuration. If evidence of instability is found, the results will be reported to the New Mexico Environment Department (NMED), and DOE/LANS will discuss with NMED stabilization options at that time. This request for a deferral will not affect the completion of the GCS in Upper Sandia Canyon by July 1, 2012.

If you have any questions, please contact Steve Veenis (505) 667-0013 (veenis@lanl.gov) or Cheryl Rodriguez at (505) 665-5330 (cheryl.rodriguez@nnsa.doe.gov).

Sincerely,

Michael J. Graham, Associate Director
Environmental Programs
Los Alamos National Laboratory

Sincerely,

George J. Rael, Assistant Manager
Environmental Projects Office
Los Alamos Site Office
