Title: Status of Neutron EDM Searches

Author(s): Christopher M Mauger

Intended for: Audience of theoretical physicists working on models of CP violation.
Status of Neutron EDM Searches

Christopher M Mauger

Los Alamos National Laboratory, Subatomic Physics

After a brief historical introduction, I will describe current experimental searches for a non-zero neutron electric dipole moment. I will discuss the general experimental methods and limits of past measurements. I will then focus on some of the more difficult technical challenges to reaching beyond the current limits with a focus on the nEDM experiment which will take place at Oak Ridge National Laboratory.
