## Glossary

**Acre-foot** (Ac-Ft, acre-ft) is the quantity of water required to cover 1 acre to a depth of 1 foot and is equivalent to 43,560 cubic feet, 325,851 gallons, or 1233.49 cubic meters.

**Cfs-day** is the volume of water represented by the flow of 1 cubic foot per second for 24 hours. It is equivalent to 86,400 cubic feet, 1.98347 acre-feet, 646,317 gallons, or 2,445 cubic meters.

**Control** designates a feature downstream from the gage that determines the stage-discharge relation at the gage. This feature may be a natural constriction of the channel, an artificial structure, or a uniform cross section over a long reach of the channel.

**Control structure** as used in this report is a structure on a stream or canal that is used to regulate the flow or stage of the stream or to prevent the intrusion of salt water.

**Cubic feet per second per square mile** [(ft<sup>3</sup>/s)/mi<sup>2</sup>] is the average number of cubic feet of water flowing per second from each square mile of area drained, assuming that the runoff is distributed uniformly in time and area.

**Cubic foot per second** (ft<sup>3</sup>/s) is the rate of discharge representing a volume of 1 cubic foot passing a given point during 1 second and is equivalent to 7.48 gallons per second, 448.8 gallons per minute, or 0.02832 cubic meters per second.

**Discharge** is the volume of water (or more broadly, volume of fluid including suspended sediment) that passes a given point within a given period of time.

**Drainage area** (DA) of a stream at a specified location is that area, measured in a horizontal plane, enclosed by a topographic divide, from which direct surface runoff from precipitation normally drains by gravity into the stream above the specified point. Figures of drainage area given herein include all closed basins, or noncontributing areas, within the area unless otherwise noted.

**Drainage basin** is a part of the surface of the earth that is occupied by a drainage system, which consists of a surface stream or a body of impounded surface water together with all tributary surface streams and bodies of impounded surface water.

**Gage height** (GH) is the water-surface elevation referred to in some arbitrary gage data. Gage height is often used interchangeably with the more general term “stage,” although gage height is more appropriate when used with a reading on a gage.

**Gaging station** is a particular site on a stream, canal, lake, or reservoir where systematic observations of hydrologic data are obtained.

**GPS** is an abbreviation for Global Positioning System.

## Glossary (continued)

**HWM** is an abbreviation for high-water mark.

**Instantaneous discharge** is the discharge at a particular instant of time.

**LANL** is the acronym for Los Alamos National Laboratory.

**Mean discharge (MEAN)** is the arithmetic mean of individual daily mean discharges during a specific period.

**National Geodetic Vertical Datum of 1929 (NGVD)** is a geodetic datum derived from a general adjustment of the first order level nets of both the United States and Canada. It was formerly called *Sea Level Datum of 1929* or “mean sea level” in this series of reports. Although the datum was derived from the average sea level over a period of many years at 26 tide stations along the Atlantic, Gulf of Mexico, and Pacific coasts, it does not necessarily represent the local mean sea level at any particular place.

**NPDES** is the abbreviation for National Pollution Discharge Elimination System.

**SR** means “State Road.”

**Stage.** See **Gage Height**.

**Stage-discharge relation** is the relation between the water-surface elevation, termed “gage height,” and the volume of water flowing in a channel per unit of time.

**Stream flow** is the discharge that occurs in a natural channel.

**SWSC** is an abbreviation for sanitary wastewater systems consolidation.

**USGS** is the abbreviation for United States Geological Survey.

**Water year** in reports dealing with surface water supply is the 12-month period, October 1 through September 30. The water year is designated by the calendar year in which it ends and which includes 9 of the 12 months. Thus, the year ending September 30, 1980, is called the “1980 water year.”

**WDR** is an abbreviation for “Water-Data Report” in the “Revised Records” paragraph to refer to annual hydrologic-data reports.

**WSP** is an abbreviation for “Water-Supply Paper” in references to previously published reports.

# **Surface Water Data at Los Alamos National Laboratory: 2003 Water Year**

**by**

**D. A. Shaull, D. Ortiz, M. R. Alexander, and R. P. Romero**

## **ABSTRACT**

**The principal investigators collected and computed surface water discharge data from 36 stream-gaging stations that cover most of Los Alamos National Laboratory and one at Bandelier National Monument. Also included are discharge data from three springs—two that flow into Cañon de Valle and one that flows into Water Canyon—and peak flow data from 16 stations.**

### **Introduction**

This annual water data report from Los Alamos National Laboratory (LANL) contains flow data from 36 stream-gaging stations that cover most of the Laboratory's property. We focused data collection on the Laboratory's downstream boundary, approximated by New Mexico State Highway 4; the upstream boundary is approximated by New Mexico State Highway 501. Some of the gaging stations are within Laboratory boundaries and were originally installed to assist groups other than the Water Quality and Hydrology Group (RRES-WQH) that also conduct site-specific earth science research.

Water chemistry data from selected storm events occurring at some stations will be published in the 2003 "Los Alamos National Laboratory Environmental Surveillance Report."

### **Station Identification Numbers**

The US Geological Survey (USGS), Water Resources Division, assigns a unique identification number to each stream-gaging station it establishes. All sites numbered since 1950 are part of the downstream order system. The downstream order system increases station numbers in the downstream direction along main streams, and, in the case of this report, their respective mouths to the Rio Grande.

This report adheres to the United States Geological Survey (USGS) convention of downstream order. Because of the close proximity of stations in this network, the first five digits of all station numbers are 08313. We have replaced this number string with the letter E in the station number partly to abbreviate and also to accommodate instrumentation.

## Data Collection and Computation

A complete record-gaging station gathers records of stage and discharge measurements from streams or canals. In addition to gathering these stage and discharge measurements, we directly observe factors affecting the stage/discharge relation, consult weather records, and use other information that supplements base data in determining daily flow. Direct readings on a nonrecording gage or from the data logger provide integrated (5-minute) records of stage. We measure discharge with current meters, using methods adapted by the USGS as a result of experience accumulated since 1880. Standard textbooks describe these methods, as do *Water-Supply Paper 2175* and the *US Geological Survey Technique of Water Resources Investigations*, Book 3, Chapter A6.

We use stage/discharge relation curves to prepare rating tables that give the discharge for any stage measured at a stream-gaging station. When it is necessary to define discharge extremes outside the range of current meter measurements, we extend the curves using

- logarithmic plotting;
- velocity area studies;
- results of indirect measurements of peak discharge, such as slope area or contracted opening measurements, and computations of flow over dams or weirs; or
- step backwater techniques.

Daily mean discharges are computed by applying daily mean gage height (stage) to the stage-discharge curves or tables. If the stage/discharge relation is subject to change because of frequent or continual change in the physical features that form the control, the daily mean discharge is computed by the shifting-control method. In the shifting-control method, correction factors based on individual discharge measurements and notes by personnel taking the measurements are applied to the gage heights before discharges are determined from the curves or tables.

The shifting-control method is also used if the stage/discharge relation for a station is temporarily changed by the presence of aquatic growth or debris on the control. At some northern stream-gaging stations, the stage/discharge relation is affected by ice in the winter, and it becomes impossible to compute discharge in the usual manner. Discharge for the period of ice effect is computed on the basis of gage height record and occasional winter discharge measurements. Consideration is given to the available information about temperature and precipitation, notes of observations, and comparable discharge records for other stations in the same or nearby basins for comparable periods of time.

For some gaging stations, periods occur when no gage height record is obtained, or the recorded gage height is so faulty that it cannot be used to compute daily discharge or contents. This happens when the recorder stops or otherwise fails to operate properly, intakes are plugged, the float is frozen in the well, etc. For such periods, the daily discharges are estimated on the basis of recorded range-in-stage, prior and subsequent records, discharge measurements, weather records, and record comparisons made against other stations in the same or nearby basins. Likewise, daily contents may be estimated from operator logs, prior and subsequent records, inflow-outflow studies, and other information.

## **Accuracy of Records**

Two factors determine the accuracy of streamflow records:

- stability of the stage-discharge relation or, if the control is unstable, the frequency of discharge measurements; and
- accuracy of measurements or stage, accuracy of discharge measurements, and interpretations of records.

Accuracy attributed to records is noted under “Remarks.”

- Excellent—95% of daily discharges are within 5% of true value;
- Good—95% of daily discharges are within 10% of true value;
- Fair—95% of daily discharges are within 15% of true value; and
- Poor—records do not meet the criteria mentioned.

Differences in accuracy may be attributed to different parts of a given record.

The number of significant figures used to report daily mean discharges is based solely on the magnitude of the discharge value:

If—the value ( $\text{ft}^3/\text{s}$ ) is	Then—it is reported as
less than $1 \text{ ft}^3/\text{s}$	nearest hundredth
$1\text{--}10 \text{ ft}^3/\text{s}$	nearest tenth
$10\text{--}1,000 \text{ ft}^3/\text{s}$	whole number
above $1,000 \text{ ft}^3/\text{s}$	three significant figures

## **Data Presentation**

The records published in this report are for each gaging station and comprise two parts:

- station manuscript description with photo and
- data table for the water year (October 1, 2002, to September 30, 2003).

The station manuscript provides data under various headings: station location, period of record, average discharge, historical extremes, record accuracy, and other points pertinent to station operation and regulation. Each continuous record of discharge includes the following categories of descriptions.

**Location.** The most accurate and available maps, plus Global Positioning System (GPS) technology, provide location information. The location of the gage with respect to the vicinity's cultural and physical features is given, as well as a name that refers to place. For a few stations, the US Army Corps of Engineers or the Water Resources Council (*River Mileage Measurement*, Bulletin 14, rev. October 1968) provided river mileage. We define left and right banks from the perspective of facing downstream.

**Drainage Area.** The most accurate and available maps provide drainage area measurements. The accuracy of drainage area measurements varies, depending on the type of map available for this purpose.

**Revised Records.** Because of new information, published records occasionally are found to be incorrect, and revisions are printed in later reports. Listed under this heading are all the reports in which revisions have been published for the station and the water years to which the revisions apply. If a revision did not include daily, monthly, or annual figures of discharge, that fact is noted after the year as follows: (M) means that only instantaneous maximum discharge was revised; (m) means that only the instantaneous minimum was revised; and (P) means that only the peak discharge was revised. If the drainage area has been revised, the report in which the most recently revised figure was first published is given.

**Period of Record.** The period of record is the time during which published records exist for a station or its equivalent station. An equivalent station is one that was in operation at a time that the present station was not and was located so that records from it can reasonably be considered equivalent to records from the present station.

**Gage.** This section describes the type of gage in current use. The datum of the current gage referred to in the *National Geodetic Vertical Datum of 1929* (see Glossary) and a condensed history of the types, locations, and data of previous gages are given under this heading.

**Remarks.** The text presents information relative to the accuracy of the records, special methods of computation, conditions that affect natural flow at the station, and other pertinent information.

**Average Discharge.** The average discharge is the average of the annual mean discharge published after five years of record. Once it is published, it continues as a moving average.

**Extremes for Period of Record.** Extremes may include maximum and minimum stages and maximum and minimum discharges or content. Unless otherwise qualified, the maximum discharge or content is the instantaneous maximum corresponding to the highest stage that occurred. The highest stage may have been obtained from a graphic or digital recorder, a crest stage gage, or by direct observation of a nonrecording gage. If the maximum stage did not occur on the same day as the maximum discharge or content, it is given separately. Similarly, the minimum is the instantaneous minimum discharge, unless otherwise qualified, and was determined and is reported in the same manner as the maximum.

**Extremes Outside Period of Record.** This section contains information concerning major floods or unusually low flows that occurred outside the stated period of record. The information may have been obtained from other agencies, old data files, newspapers, or local citizens.

**Extremes for Current Year.** Extremes given here are similar to those for the period of record. The time for occurrence of peaks is expressed in 24-hour local standard time. For example, 12:30 A.M. is 0030 and 1:30 P.M. is 1330. The minimum for the current water year appears in this section.

**Data Table of Daily Mean Values.** The daily table of discharge records for stream gaging stations gives the mean discharge for each day of the water year. In the monthly summary for the table, the line headed “Total” gives the sum of the daily figures for each month; the line headed “Mean” gives the average flow in cubic feet per second for the month; and the lines headed “Max” and “Min” give the maximum and minimum daily mean discharges for each month and in acre feet, respectively, in the line headed “Ac-Ft.”

## Acknowledgments

This work was funded through emergency funds provided to DOE and LANL to remediate damage and address demonstrated vulnerabilities associated with the Cerro Grande Fire. This work has been conducted by LANL using two initiatives: The Emergency Rehabilitation Team, to address emergency and urgent actions to recover from the fire, and the Cerro Grand Rehabilitation Project (CGRP), to address near- and long-term activities required for LANL to fully recover from the fire. This work was conducted as part of the erosion control task of the CGRP.

The authors thank the following individuals for their contribution to this report: K. Buckley, B. Cata, E. Gray, G. Helland, and L. Martinez (RRES-WQH); Jim Jones (FWO-IP); and Victoria George (FWO-IP/RRES-DO).

## E030 Los Alamos above DP Canyon

**Location.** Lat  $35^{\circ}52'21''$ , long  $106^{\circ}15'36''$ , SW 1/4, SE 1/4 sec. 14, T. 19 N, R. 6 E, Los Alamos County, 150 ft upstream from mouth of DP Canyon wash and 2.4 mi upstream from NM State Highway 4.

**Drainage Area.** 8.58 mi<sup>2</sup>.

**Period of Record.** July 1994 to September 30, 2003.

**Gage.** Data logger with cellular telemetry and concrete control. Elevation of gage is 6,627 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good. Flow partially regulated by Los Alamos Reservoir about 2.5 mi upstream.

**Average Discharge.** 9 years, 0.239 ft<sup>3</sup>/s, 173 acre-ft/yr.

**Extremes Outside Period of Record.** Flood of July 31, 1968, was 329 ft<sup>3</sup>/s from slope area determination. Gage height was established later at 3.71 ft present datum.

**Extremes for Period of Record.** Maximum discharge 125 ft<sup>3</sup>/s, June 22, 2002, gage height 2.88 ft from peak flow computation. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 15 ft<sup>3</sup>/s on August 23, gage height 1.68 ft. No flow most of time.

## E050 Los Alamos below LA Weir

**Location.** Lat 35°86'71.6", long 106°21'7.4", Easting 1650066.300, Northing 1770912.00, SE 1/4, NE 1/4, sec. 20, T. 19N, R. 7E, on right bank, 200 ft downstream from LA Weir, beside NM State Highway 4, 2.7 mi northwest of White Rock, NM.

**Drainage Area.** 9.2 mi<sup>2</sup> (approximate).

**Period of Record.** May 2001 to September 30, 2003.

**Gage.** Data logger with cellular telemetry. Elevation of gage is 6,335 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good, except for estimated daily discharges, which are poor. Flows partially regulated by broad crested weir 200 ft upstream.

**Extremes for Period of Record.** Maximum discharge 43 ft<sup>3</sup>/s August 9, 2001, gage height 1.55 ft. No flow most of time.

**Extremes for Period of May 2001 to September 30, 2001.** Maximum discharge 43 ft<sup>3</sup>/s at 1815 hrs, August 9, 2001, gage height 1.55 ft. No flow most of time.

**Extremes for Period of October 1, 2001, to September 30, 2002.** Maximum discharge 0.42 ft<sup>3</sup>/s at 1905 hrs, July 23, 2002, gage height 0.88 ft. No flow most of time.

**Extremes for Current Year.** Maximum discharge 43 ft<sup>3</sup>/s at 1615 hrs, August 23, gage height 1.55 ft. No flow most of time.

## E060 Pueblo above SR-502

**Location.** Lat  $35^{\circ}52'50''$ , long  $106^{\circ}13'1''$ , in NE 1/4 NE 1/4 sec. 20, T. 19 N, R. 7 E, Santa Fe County, on right bank, 100 yd east of state highway maintenance yard, 200 ft north of NM State Highway 502, and 4.2. mi east of Los Alamos.

**Drainage Area.** 6.94 mi<sup>2</sup>.

**Period of Record.** January 1992 to September 30, 2003.

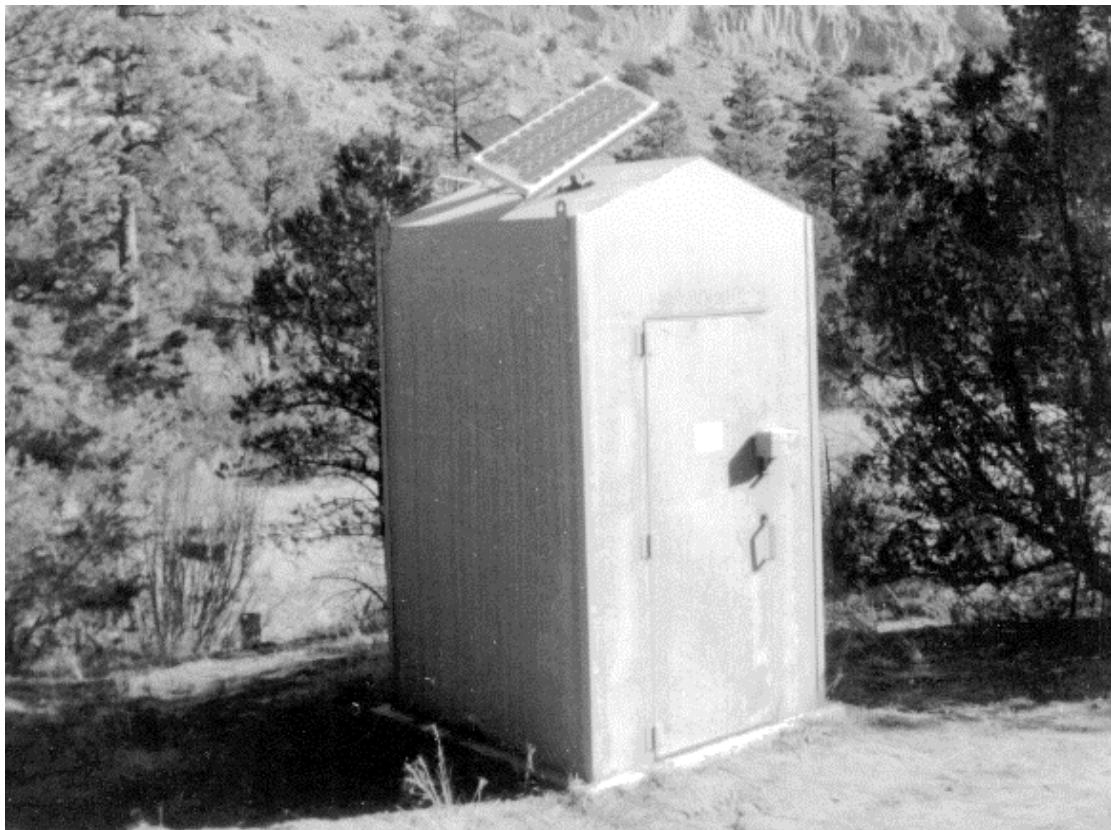

**Gage.** Data logger with cellular telemetry. Elevation of gage is 6,356 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Records fair. No diversion above station. Perennial flow is primarily from effluent.

**Average Discharge.** 9 years, 0.99 ft<sup>3</sup>/s, 717 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge 1,440 ft<sup>3</sup>/s, July 2, 2001, gage height 10.46 ft from floodmarks, from rating curve extended above 130 ft<sup>3</sup>/s on basis of slope-area measurement. No flow at times.

**Extremes for Current Water Year.** Maximum discharge 749 ft<sup>3</sup>/s at 1620 hrs, August 23, gage height 9.72 ft. No flow partial days at times.

## E089 Guaje above Rendija

**Location.** Lat 35°54'41", long 106°13'47", in SW 1/4 SW 1/4 sec. 32, T. 20 N, R. 6 E, Santa Fe County, in Santa Fe National Forest 0.4 mi northwest of Forest Road 57, 0.6 mi downstream to confluence of Guaje Canyon, 4.9 mi to intersection of San Ildefonso and Forest Road 57, and 5.4 mi northwest to intersection of Diamond Drive, San Idelfonso Road, and North Drive.

**Drainage Area.** 14.6 mi<sup>2</sup>.

**Period of Record.** June 13, 2001, to September 30, 2003.

**Gage.** Data logger with cellular telemetry. Elevation of gage is 6,370 ft above *National Geodetic Vertical Datum of 1929*.

**Remarks.** Water discharge records good, except for estimated daily discharges, which are poor.

**Extremes for Period of Record.** Maximum discharge 644 ft<sup>3</sup>/s, August 11, 2001, from peak flow computation, gage height 4.23 ft. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 360 ft<sup>3</sup>/s at 1530 hrs, August 23, gage height 3.39 ft. No flow most of time.

## E090 Rendija above Guaje

**Location.** Lat 35°54'41", long 106°13'36", in NW 1/4 SW 1/4, sec. 5, T. 19 N, R. 7 E, Santa Fe County, in Santa Fe National Forest 100 ft south of Forest Road 57, 0.20 mi upstream of mouth to Guaje Canyon, 4.5 mi to intersection of San Ildefonso Road, 5.7 mi northwest to intersection of Diamond Drive, San Ildefonso Road, and North Drive.

**Drainage Area.** 9.58 mi<sup>2</sup>.

**Period of Record.** June 16, 2001, to September 30, 2003.

**Gage.** Data logger with cellular telemetry. Elevation of gage is 6,305 ft above *National Geodetic Vertical Datum of 1929*, from GPS.

**Remarks.** Water discharge records fair, except for estimated daily discharges, which are poor.

**Extremes for Period of Record.** Maximum discharge 2,120 ft<sup>3</sup>/s, August 11, 2001, from peak flow computation, gage height 7.46 ft. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 856 ft<sup>3</sup>/s at 1535 hrs, August 23, gage height 6.32 ft. No flow most of time.

## E200 Mortandad below Effluent Canyon

**Location.** Lat 35°51'55", long 106°17'46", SW 1/4 NE 1/2 sec. 22, T. 19 N, R. 6 E, Los Alamos County, 0.25 mi north of LANL TA-50, 0.25 mi below TA-50 outfall, and 0.6 mi north of Pajarito Road.

**Drainage Area.** 0.49 mi<sup>2</sup>.

**Period of Record.** May 10, 1995, to September 30, 2003.

**Gage.** Data logger with cellular telemetry and steel "fabricated" nonstandard flume as low-water control. Elevation of gage is 7,062.50 ft above *National Geodetic Vertical Datum of 1929*, from survey.

**Remarks.** Water discharge records fair, except for estimated daily discharges, which are poor. Flow is mostly effluent from LANL TA-50, liquid radiological waste plant.

**Average Discharge.** 9 years, 0.047 ft<sup>3</sup>/s, 34 acre-ft/yr.

**Extremes outside Period of Record.** Flow of 34 ft<sup>3</sup>/s occurred August 19, 1970, gage height 3.07 ft, from old data files of USGS.

**Extremes for Period of Record.** Maximum discharge 49 ft<sup>3</sup>/s, June 27, 2001, gage height 3.26 ft. No flow at times.

**Extremes for Current Water Year.** Maximum discharge 24 ft<sup>3</sup>/s at 1400 hrs, August 23, gage height 2.73 ft. No flow at times.

## E202 Mortandad above Sediment Traps

**Location.** Lat 35°51'39", long 106°16'15", NE 1/4 SW 1/4 sec. 23, T. 19 N, R. 6 E, Los Alamos County, 4.3 mi upstream from NM State Highway 4.

**Drainage Area.** 0.81 mi<sup>2</sup>.

**Period of Record.** October 1, 1997, to September 30, 2003.

**Gage.** Data logger with cellular telemetry and 2.5-ft Parshall flume. Elevation of gage is 6,833.06 ft above *National Geodetic Vertical Datum of 1929*.

**Remarks.** Water discharge records good, except for periods of estimated record, which are fair.

**Extremes for Period of Record.** Maximum discharge 6.4 ft<sup>3</sup>/s, gage height 0.87 ft, August 17, 1997. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 1.9 ft<sup>3</sup>/s, gage height 0.34 ft from floodmark, August 23. No flow most of time.

## **E203 Mortandad below Sediment Traps**

**Location.** Lat 35°51'39", long 106°16'6", NE 1/4 SW 1/4 sec. 23, T. 19 N, R. 6 E, Los Alamos County, at exit from sediment collection traps, 4.2 mi upstream from NM State Highway 4.

**Drainage Area.** 0.9 mi<sup>2</sup>, approximately.

**Period of Record.** October 1, 1996, to September 30, 2003.

**Gage.** Data logger and 6-in. Parshall flume. Elevation of gage is 6,811.52 ft above *National Geodetic Vertical Datum of 1929*.

**Remarks.** Records good.

**Extremes for Period of Record.** No flow for period.

**Extremes for Current Water Year.** No flow all year.

## E225 Cañada del Buey near MDA-G

**Location.** Lat  $35^{\circ}50'1.3''$ , long  $106^{\circ}14'22.1''$ , in Ramon Vigil Grant, Los Alamos County, 0.1 mi south of Santa Fe/Los Alamos County Line and 2.5 mi upstream from NM State Highway 4 in White Rock.

**Drainage Area.** 1.58 mi<sup>2</sup>.

**Period of Record.** October 1993 to September 30, 2003.

**Gage.** Data logger with cellular telemetry and concrete control. Elevation of gage is 6,602 ft above *National Geodetical Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good.

**Average Discharge.** 9 years, zero.

**Extremes for Period of Record.** Maximum discharge 17 ft<sup>3</sup>/s, September 8, 1995, gage height 2.71 ft. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 16 ft<sup>3</sup>/s at 2000 hrs, August 25, gage height 2.67 ft. No flow most of time.

## **E230 Cañada del Buey above SR-4**

**Location.** Lat  $35^{\circ}49'38''$ , long  $106^{\circ}12'43''$ , in Ramon Vigil Grant, Los Alamos County, on left bank 250 ft upstream from NM State Highway 4 in White Rock, NM.

**Drainage Area.** 2.14 mi<sup>2</sup>.

**Period of Record.** October 1991 to September 30, 2003.

**Gage.** Data logger with cellular telemetry and concrete control. Elevation of gage is 6,401 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good.

**Average Discharge.** 9 years, 0.010 ft<sup>3</sup>/s, 7.2 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge 210 ft<sup>3</sup>/s, June 17, 1999, gage height 3.30 ft. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 100 ft<sup>3</sup>/s at 1705 hrs, May 26, gage height 2.25 ft. No flow most of time.

## E240 Pajarito below SR-501

**Location.** Lat  $35^{\circ}52'3.9''$ , long  $106^{\circ}21'09''$ , SE 1/4 NW 1/4, sec. 19, T. 19 N, R. 6 E, Los Alamos County, in Santa Fe National Forest, 100 ft downstream from NM State Highway 501.

**Drainage Area.** 1.90 mi<sup>2</sup>.

**Period of Record.** October 1993 to June 28, 2000 (destroyed by flood); April to September 30, 2003.

**Revised Records.** WDR 1997: Gage height “Extremes for Period of Record.”

**Gage.** Data logger with cellular telemetry. Elevation of gage is 7,720 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey. Formerly published as “Pajarito Canyon above Highway 501 near Los Alamos, NM” at different datum.

**Remarks.** Records fair, except for estimated daily discharges, which are poor.

**Average Discharge.** 9 years, 0.12 ft<sup>3</sup>/s, 87 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge 1,020 ft<sup>3</sup>/s, June 28, 2000, from peak flow computation, gage height not determined. No flow at times.

**Extremes for Current Water Year.** Maximum discharge 61 ft<sup>3</sup>/s on August 23, gage height 1.50 ft from floodmark. No flow at times.

## E2425 La Delfe above Pajarito

**Location.** Lat  $35^{\circ}51'25''$ , long  $106^{\circ}19'56''$ , Ramon Vigil Grant, Los Alamos County 0.25 mi west of Starmer's Gulch and Pajarito Canyon and 0.75 mi south of LANL TA-22, building 91.

**Drainage Area.** 0.53 mi<sup>2</sup>.

**Period of Record.** June 1, 2000, to September 30, 2003.

**Gage.** Data logger with cellular telemetry and 90° sharp crested weir. Elevation of gage is 7,340 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good, except for estimated daily discharges, which are poor.

**Extremes for Period of Record.** Maximum discharge 6.6 ft<sup>3</sup>/s, June 21, 2002, gage height 1.91 ft; maximum gage height recorded 2.01 ft, January 4, 2002 (ice jam); no flow at times.

**Extremes for Current Year.** Maximum discharge 0.16 ft<sup>3</sup>/s at 1145 hrs, April 15, gage height 0.89 ft. No flow at times.

## E250 Pajarito above SR-4

**Location.** Lat  $35^{\circ}49'26.7''$ , long  $106^{\circ}13'40.5''$ , in Ramon Vigil Grant, Los Alamos County on left bank, 400 ft southeast of Pajarito Road, 0.40 mi upstream from NM State Highway 4, and 1.4 mi from White Rock, NM.

**Drainage Area.** 10.9 mi<sup>2</sup>.

**Period of Record.** November 1993 to September 30, 2003.

**Gage.** Data logger with cellular telemetry and concrete control. Elevation of gage is 6,535 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good, except for estimated daily discharges, which are poor.

**Average Discharge.** 9 years, 0.03 ft<sup>3</sup>/s, 22 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge 26 ft<sup>3</sup>/s, June 22, 2002, gage height 3.86 ft. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge 0.20 ft<sup>3</sup>/s at 0250 hrs, August 26, gage height 1.85 ft. No flow most of time.

## E252 Water above SR-501

**Location.** Lat 35°50'18", long 106°21'42.6", T. 19 N, R. 5 E, Los Alamos County in Santa Fe National Forest, 0.3 mi upstream from NM State Highway 501, and 0.4 mi northwest of junction of State Highways 501 and 4.

**Drainage Area.** 3.39 mi<sup>2</sup>.

**Period of Record.** October 1994 to September 2000; October 2000 to June 2000 (destroyed by flood); April 2001 to September 2003.

**Gage.** Data logger with cellular telemetry. Elevation of gage is 7,558 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey. New location 30 ft upstream at same datum.

**Remarks.** Records above 1 ft<sup>3</sup>/s are good to fair, except for estimated daily discharges, which are poor.

**Average Discharge.** 9 years, 0.072 ft<sup>3</sup>/s, 52 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge 840 ft<sup>3</sup>/s on June 28, 2000, from peak flow computation, gage height 7.91 ft. No flow at times.

**Extremes for Current Water Year.** Maximum discharge 2.1 ft<sup>3</sup>/s at 1230 hrs, August 28, gage height 2.75 ft. No flow at times.

## E2625 Water below MDA-AB

**Location.** Lat 35°49'31", long 106°17'03", in Ramon Vigil Grant, Los Alamos County, on left bank 1.6 mi downstream from E262, 2.6 mi upstream from NM State Highway 4, and 4.6 mi northeast of Pajarito Road junction.

**Drainage Area.** 11.3 mi<sup>2</sup>.

**Period of Record.** May 1 to September 30, 2003.

**Gage.** Data logger with cellular telemetry and 90° weir plate. Elevation of gage is 6,580 ft above *National Geodetic Vertical Datum of 1929*.

**Remarks.** Records poor.

**Extremes for Period of Record.** Maximum discharge 53 ft<sup>3</sup>/s, June 22, 2002, gage height 3.65 ft; no flow most of time.

**Extremes for Current Water Year.** Maximum discharge 11 ft<sup>3</sup>/s at 1320 hrs, August 23, gage height, 2.51 ft. No flow most of time.

## E265 Water below SR-4

**Location.** Lat  $35^{\circ}48'17.7''$ , long  $106^{\circ}14'31.6''$  in Ramon Vigil Grant, Los Alamos County, on left bank 0.4 mi downstream from NM State Highway 4, and 4.0 mi southwest of White Rock.

**Drainage Area.**  $13.0 \text{ mi}^2$ .

**Period of Record.** October 1993 through September 30, 2003.

**Revised Records.** LA-13905-PR: Drainage area.

**Gage.** Data logger with cellular telemetry and stabilized natural rock control. Elevation of gage is 6,314 ft above *National Geodetic Vertical Datum of 1929*, from GPS survey.

**Remarks.** Water discharge records good, except for estimated daily discharges, which are poor.

**Average Discharge.** 8 years,  $0.03 \text{ ft}^3/\text{s}$ , 22 acre-ft/yr.

**Extremes for Period of Record.** Maximum discharge  $274 \text{ ft}^3/\text{s}$ , gage height 5.13 ft (from floodmark), June 28, 2000. No flow most of time.

**Extremes for Current Water Year.** Maximum discharge  $25 \text{ ft}^3/\text{s}$ , time unknown, May 26, gage height 1.40 ft (from floodmark). No flow most of time.

## E350 Rio de los Frijoles at Bandelier

**Location.** Lat  $35^{\circ}46'37.0''$ , long  $106^{\circ}16'9.6''$ , Ramon Vigil Grant, Sandoval County, in Bandelier National Monument, on right bank 800 ft downstream from Monument Headquarters, 6.5 mi south of Los Alamos, 18.5 mi northwest of Santa Fe, and at river mile 2.0.

**Drainage Area.** 18.16 mi<sup>2</sup>.

**Period of Record.** July 1963 to September 1969; July 1977 to September 1982; May 1993 to September 1996; and October 1998 to September 30, 2003.

**Gage.** Data logger and concrete control. Elevation of gage is 6,046 ft above *National Geodetic Vertical Datum of 1929*, from GPS Survey.

**Remarks.** Water discharge records good, except those for winter period, which are poor. One small diversion from left bank about 1.0 mi upstream for irrigation of small orchard. The La Mesa fire, which occurred during mid June 1977, burned about 40% of the forest cover of this watershed.

**Extremes for Period of Record.** Maximum discharge 3,030 ft<sup>3</sup>/s, July 21, 1978, gage height 6.34 ft, site and datum then in use. Minimum daily discharge 0 ft<sup>3</sup>/s, July 16–19 and 26, 2003.

**Extremes for Current Water Year.** Maximum discharge 21 ft<sup>3</sup>/s at 1705 hrs, May 26, gage height 2.43 ft. Minimum daily 0 flow on July 16–19, 26.

## S003 Martin Spring at TA-16

**Location.** Lat  $35^{\circ}50'32''$ , long  $106^{\circ}20'11''$ , 0.25 mi south of building 344 in Laboratory TA-16.

**Gage.** Data logger with  $90^{\circ}$  weir. Elevation of gage is 7,429.5 ft above *National Geodetic Vertical Datum of 1929*, from survey.

**Period of Record.** October 1, 1996, to September 30, 2003.

**Remarks.** Water discharge records good. This spring is in the Water Canyon drainage.

## S003 Martin Spring at TA-16

Daily Mean Discharge in Cubic Feet per Second

Water Year October 2002 to September 2003

## **Peak Flow Section**

## **Peak Flow Section**

We have listed the peaks for the period of record for the stations listed here. We chose a value as a minimum (typically 5 to 10 ft<sup>3</sup>/s), although there is variation. That “base” discharge should yield (about) three peaks per year. This is not a hard rule, just a guideline. If the table seems not to coincide with the period of record on station manuscripts, it means those earlier years listed produced no peaks above the minimum value listed on the table.

The minimum time between peaks is 12 hrs. That is, once the stream receded from peak flow, it was below that level for 12 hrs. This enhances the individuality of the peak flows and eliminates any secondary peaks from the same rain event. It also smoothes peak selection during snowmelt runoff periods.

Stations in this section are as follows:

- E030 Los Alamos above DP Canyon
- E040 DP above Los Alamos Canyon
- E042 Los Alamos above SR-4
- E060 Pueblo above SR-502
- E125 Sandia above SR-4
- E200 Mortandad below Effluent Canyon
- E225 Cañada del Buey near MDA-G
- E230 Cañada del Buey above SR-4
- E240 Pajarito below SR-501
- E245 Pajarito above TA-18
- E250 Pajarito above SR-4
- E252 Water above SR-501
- E253 Cañon de Valle above SR-501
- E265 Water below SR-4
- E267 Potrillo above SR-4
- E275 Ancho below SR-4

### E030 Los Alamos above DP Canyon

Period Starting 00:00\_10/01/1994  
Ending 24:00\_09/30/2003  
Minimum Value 10.00

Time	stage ft	Q ft <sup>3</sup> /s
