**Subject: National Pollutant Discharge Elimination System (NPDES) Permit No. NMR053195, Multi-Sector General Permit (MSGP) Quarterly Visual Assessment (QVA) Forms for August and September of 2016 for TA-54 RANT**

Please find attached completed MSGP QVA Forms documenting visual assessments performed during the third quarter of monitoring at TA-54 RANT. Per Parts 3.2.2 and 5.5 of the 2015 MSGP, the QVA forms shall be incorporated into your MSGP Storm Water Pollution Prevention Plan (SWPPP).

Part 3.2.1 of the 2015 MSGP requires the visual assessment of storm water discharge samples collected from each outfall once each quarter for the entire permit term. Part 3.2.3 allows facilities that are located in an area with a semi-arid climate and/or in an area where freezing conditions exist for an extended period to distribute the quarterly visual assessments during seasons when precipitation runoff occurs. Accordingly, Los Alamos National Security LLC (LANS) has designated the following MSGP monitoring quarters.

Quarter 1:	April – May	Quarter 2:	June – July
Quarter 3:	August – September	Quarter 4:	October - November

The attached QVA forms document the following information as required by Part 3.2.2 of the 2015 MSGP and were completed by Deployed Environment, Safety, and Health Services (DESHS) and Environmental Compliance Programs (EPC-CP) personnel.

- Sample location;
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing the visual assessment, and their signatures;
- Nature of the discharge (i.e., runoff or snowmelt);
- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination (if applicable);
- If applicable, why it was not possible to take a sample within the first 30 minutes of the storm event.

Please have the EWMO-DO Operations Manager sign the certification statement contained in this memorandum to complete the duly authorized signatory requirements for the QVAs completed by a

David Schrock

DESHS representative in Enclosure 1. The EPC-CP Group Leader has signed the certification statement to meet the duly authorized signatory requirements for the QVA completed by EPC-CP representatives contained in Enclosures 2. Once this memorandum is signed, place it and all associated enclosures in the appropriated MSGP SWPPP.

### Enclosure 1

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information contained therein. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information contained is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part 3.2.3 of the 2015 MSGP allows the facility to take a substitute sample during the next qualifying storm event when adverse weather conditions prevent the collection of samples during a specific quarter. Adverse weather conditions are those that are dangerous or create inaccessibility for personnel, or situations that otherwise make sampling impractical, such as drought or extended frozen

conditions. Documentation of the rationale for no visual assessment for the quarter must be included in the facility-specific SWPPP.

Please contact Holly Wheeler at 667-1312 (hbenson@lanl.gov) if you have questions regarding the QVA documentation. Thank you for your assistance in meeting the requirements of the Laboratory's NPDES 2015 MSGP Permit.

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample Information

30	Document the monitoring Period by using the Monitoring Period lookup table.	Aug/Sep			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/3/16 00:45			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/3/16 00:45			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/3/16 12:57			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.	rain 0.68			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line.	No personnel were present, AEA conducted the next business day			<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	COOLIE			<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
160					<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.	Aug/Sep			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/3/16 18:10			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/3/16 18:10			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/4/16 13:32			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.	rain 0.37			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. QVA conducted the next business day	No personnel were present,			<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150					<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

*fine*

160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
		<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.							
Sample information							
30	Document the monitoring Period by using the Monitoring Period lookup table.	Aug/Sep			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/6/16 16:00			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/6/16 16:00			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).	8/8/16 14:32			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.	rain 0.33			<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. QSA conducted the next business day	No personnel were present,			<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Parameters							
110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150					<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

*Fine*

160

Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

☐ ☐ ☒

170

Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)

☐ ☐ ☒

180

Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)

☐ ☐ ☒

190

Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		M3	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		95/05/16 14:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		09/05/16 14:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		09/06/16 08:40	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.18"	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA was conducted the next business day.</b>			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140				DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Parameters							
110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150					<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

fine

160 Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

☐

☐

☒

170 Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)

☐

☐

☒

180 Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)

☐

☐

☒

190 Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)

☐

☐

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Aug/Sep	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		09/17/2016 02:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		09/17/2016 02:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		09/19/2016 14:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.03	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit No. NMR053195, Multi-Sector General Permit (MSGP) Quarterly Visual Assessment (QVA) Forms for October and November of 2016 for TA-54 Area L**

Please find attached a completed MSGP QVA Form documenting a visual assessment performed during the fourth quarter of monitoring at TA-54 Area L. Pursuant to Parts 3.2.2 and 5.5 of the 2015 MSGP, this memorandum along with all of the attached QVA form shall be incorporated into your MSGP Storm Water Pollution Prevention Plan (SWPPP).

Part 3.2.1 of the 2015 MSGP requires the visual assessment of storm water discharge samples collected from each outfall once each quarter for the entire permit term. Part 3.2.3 allows facilities that are located in an area with a semi-arid climate and/or in an area where freezing conditions exist for an extended period to distribute the quarterly visual assessments during seasons when precipitation runoff occurs. Accordingly, Los Alamos National Security LLC (LANS) has designated the following MSGP monitoring quarters.

Quarter 1:	April – May	Quarter 2:	June – July
Quarter 3:	August – September	Quarter 4:	October - November

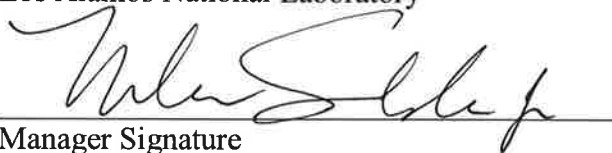

The attached QVA form documents the following information as required by Part 3.2.2 of the 2015 MSGP and was completed by an Environmental Compliance Programs (EPC-CP) representative.

- Sample location;
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing the visual assessment, and their signatures;
- Nature of the discharge (i.e., runoff or snowmelt);
- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination (if applicable);
- If applicable, why it was not possible to take a sample within the first 30 minutes of the storm event.

The signed certification statement contained in this memorandum satisfies the duly authorized signatory requirement for the QVA completed by an EPC-CP representative contained in Enclosure 1.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information contained therein. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information contained is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part 3.2.3 of the 2015 MSGP allows the facility to take a substitute sample during the next qualifying storm event when adverse weather conditions prevent the collection of samples during a specific quarter. Adverse weather conditions are those that are dangerous or create inaccessibility for personnel, or situations that otherwise make sampling impractical, such as drought or extended frozen conditions. Documentation of the rationale for no visual assessment for the quarter must be included in the facility-specific SWPPP.

Please contact Holly Wheeler at 667-1312 (hbenson@lanl.gov) if you have questions regarding the QVA documentation. Thank you for your assistance in meeting the requirements of the Laboratory's NPDES 2015 MSGP Permit.

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit No. NMR053195, Multi-Sector General Permit (MSGP) Quarterly Visual Assessment (QVA) Forms for October and November of 2016 for TA-54 Area G**

Please find attached completed MSGP QVA Forms documenting visual assessments performed during the fourth quarter of monitoring at TA-54 Area G. Pursuant to Parts 3.2.2 and 5.5 of the 2015 MSGP, this memorandum containing the signed certification statements and all attached QVA forms shall be incorporated into your MSGP Storm Water Pollution Prevention Plan (SWPPP).

Part 3.2.1 of the 2015 MSGP requires the visual assessment of storm water discharge samples collected from each outfall once each quarter for the entire permit term. Part 3.2.3 allows facilities that are located in an area with a semi-arid climate and/or in an area where freezing conditions exist for an extended period to distribute the quarterly visual assessments during seasons when precipitation runoff occurs. Accordingly, Los Alamos National Security, LLC (LANS) has designated the following MSGP monitoring quarters.

Quarter 1:	April – May	Quarter 2:	June – July
Quarter 3:	August – September	Quarter 4:	October - November

The attached QVA forms document the following information as required by Part 3.2.2 of the 2015 MSGP and were completed by Deployed Environment, Safety, and Health Services (DESHS) and Environmental Compliance Programs (EPC-CP) personnel.

- Sample location;
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing the visual assessment, and their signatures;
- Nature of the discharge (i.e., runoff or snowmelt);
- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination (if applicable);
- If applicable, why it was not possible to take a sample within the first 30 minutes of the storm event.

David Schrock

Please have the EWMO-DO Operations Manager sign the certification statement contained in this memorandum to complete the duly authorized signatory requirements for the QVAs completed by a DESHS representative in Enclosure 1. The EPC-CP Group Leader has signed the certification statement to meet the duly authorized signatory requirements for the QVA completed by EPC-CP representatives contained in Enclosure 2.

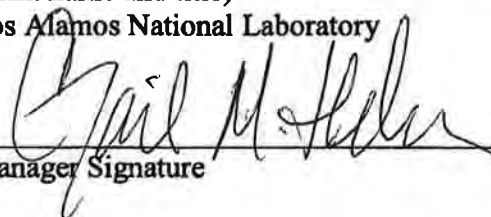

### Enclosure 1

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information contained therein. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information contained is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.							
Sample information							
30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 16:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 16:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/11/2016 13:42	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.08	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Parameters							
110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 16:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 16:00	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/11/2016 14:31	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.08	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample oderless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	Fine	DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 18:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 18:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/22/2016 14:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.48	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140				DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.

150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	Fine	DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 18:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 18:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/22/2016 15:02	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.48	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140				DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.

150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

**Sample information**

30	Document the monitoring Period by using the Monitoring Period lookup table.		Mp4	VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).	11/05/16 22:45		VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).	11/05/16 22:45		VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).	11/07/16 13:46		VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.	Rain 0.55		VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line.			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

**Parameters**

110	Is sample colorless? If "Failed", describe.			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.			VRB	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150		Fine		VRB	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.

160

VRB

Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)

170

VRB

Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)

180

VRB

Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)

190

VRB

*Date:* **JAN 20 2017**

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit No. NMR053195, Multi-Sector General Permit (MSGP) Quarterly Visual Assessment (QVA) Forms for October and November of 2016 for TA-54 RANT**

Please find attached completed MSGP QVA Forms documenting visual assessments performed during the fourth quarter of monitoring at TA-54 Area G. Pursuant to Parts 3.2.2 and 5.5 of the 2015 MSGP, the QVA forms shall be incorporated into your MSGP Storm Water Pollution Prevention Plan (SWPPP).

Part 3.2.1 of the 2015 MSGP requires the visual assessment of storm water discharge samples collected from each outfall once each quarter for the entire permit term. Part 3.2.3 allows facilities that are located in an area with a semi-arid climate and/or in an area where freezing conditions exist for an extended period to distribute the quarterly visual assessments during seasons when precipitation runoff occurs. Accordingly, Los Alamos National Laboratory LLC (LANS) has designated the following MSGP monitoring quarters.

Quarter 1:	April – May	Quarter 2:	June – July
Quarter 3:	August – September	Quarter 4:	October - November

The attached QVA forms document the following information as required by Part 3.2.2 of the 2015 MSGP and were completed by Deployed Environment, Safety, and Health Services (DESHS) and Environmental Compliance Programs (EPC-CP) personnel.

- Sample location;
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing the visual assessment, and their signatures;
- Nature of the discharge (i.e., runoff or snowmelt);
- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination (if applicable);
- If applicable, why it was not possible to take a sample within the first 30 minutes of the storm event.

David Schrock

Please have the EWMO-DO Operations Manager sign the certification statement contained in this memorandum to complete the duly authorized signatory requirements for the QVAs completed by a DESHS representative in Enclosure 1. The EPC-CP Group Leader has signed the certification statement to meet the duly authorized signatory requirements for the QVA completed by EPC-CP representatives contained in Enclosures 2. Once this memorandum is signed, place it and all associated enclosures in the appropriated MSGP SWPPP.

### Enclosure 1

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information contained therein. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information contained is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Part 3.2.3 of the 2015 MSGP allows the facility to take a substitute sample during the next qualifying storm event when adverse weather conditions prevent the collection of samples during a specific quarter. Adverse weather conditions are those that are dangerous or create inaccessibility for

personnel, or situations that otherwise make sampling impractical, such as drought or extended frozen conditions. Documentation of the rationale for no visual assessment for the quarter must be included in the facility-specific SWPPP.

Please contact Holly Wheeler at 667-1312 (hbenson@lanl.gov) if you have questions regarding the QVA documentation. Thank you for your assistance in meeting the requirements of the Laboratory's NPDES 2015 MSGP Permit.

**Reason:** MSGP Quarterly Visual Assessment

**Precipitation Type:** PR1

**Odor:**

**Clarity:**

**Settled Solids:**

**Suspended Solids:**

**Special Instructions:** NMR053195

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 09:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/09/2016 09:30	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		10/11/2016 10:43	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.03	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line.						
80	<b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.						
120				DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

## Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		Oct/Nov	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 16:15	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/21/2016 16:15	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		11/22/2016 11:20	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		Rain 0.44	DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line. <b>Comments: No personnel were present. QVA conducted the next business day.</b>			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Parameters

110	Is sample colorless? If "Failed", describe.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.			DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140				DS	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	Course	DS	<input checked="" type="checkbox"/>	<input type="checkbox"/>
160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.		DS	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line. (Range: 0 - 0)		DS	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## memorandum

*Environmental Protection & Compliance Division  
Compliance Programs (EPC-CP)*

*To/MS:* David Schrock, DESHS-EWMS, J962  
*Thru/MS:* Terrill Lemke, EPC-CP, (E-File) *msf*  
*From/MS:* Holly Wheeler, EPC-CP, (E-File) *hw*  
*Phone/Fax:* 667-1312  
*Symbol:* EPC-DO: 17-069  
*Date:* JAN 24 2017

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit No. NMR053195, Multi-Sector General Permit (MSGP) Quarterly Visual Assessment (QVA) Forms for April and May of 2016 for TA-54 Area G and TA-54 RANT (resend with certification statement within memorandum)**

Per the request of the Deployed Environmental Professional (DEP), the purpose of this memorandum is to resend QVA forms requiring the Environmental and Waste Management Facility Operations (EWMO), Operations Manager certification with the certification statement contained in the memorandum. This will allow the Operations Manager to sign only one certification statement for all attached QVA forms rather than signing each individual form. Therefore, completed MSGP QVA forms are attached documenting visual assessments performed during the first quarter of monitoring at the TA-54 Area G and RANT. These Forms were previously transmitted to David Schrock on October 13, 2016 (EPC-DO-16-301). Pursuant to Parts 3.2.2 and 5.5 of the 2015 MSGP, the QVA forms along with the signed certification statement contained in this memorandum shall be incorporated into your MSGP Storm Water Pollution Prevention Plan (SWPPP).

Part 3.2.1 of the 2015 MSGP requires the visual assessment of storm water discharge samples collected from each outfall once each quarter for the entire permit term. Part 3.2.3 allows facilities that are located in an area with a semi-arid climate and/or in an area where freezing conditions exist for an extended period to distribute the quarterly visual assessments during seasons when precipitation runoff occurs. Accordingly, Los Alamos National Security, LLC (LANS) has designated the following MSGP monitoring quarters.

Quarter 1:	April – May	Quarter 2:	June – July
Quarter 3:	August – September	Quarter 4:	October - November

The attached QVA forms document the following information as required by Part 3.2.2 of the 2015 MSGP and were completed by the Deployed Environment, Safety, and Health Services (DESHS) DEP.

- Sample location;
- Sample collection date and time, and visual assessment date and time for each sample;
- Personnel collecting the sample and performing the visual assessment, and their signatures;
- Nature of the discharge (i.e., runoff or snowmelt);

- Results of observations of the stormwater discharge;
- Probable sources of any observed stormwater contamination (if applicable);
- If applicable, why it was not possible to take a sample within the first 30 minutes of the storm event.

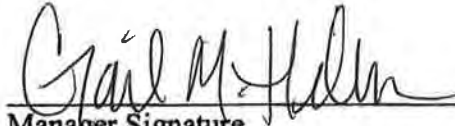

Please have the EWMO Operations Manager sign the certification statement below to complete the duly authorized signatory requirement for the QVAs attached as Enclosure 1.

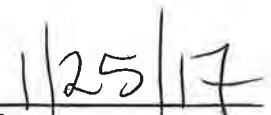

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information contained therein. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information contained is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Gail M. Helm, EWMO Operations Manager

Date

Part 3.2.3 of the 2015 MSGP allows the facility to take a substitute sample during the next qualifying storm event when adverse weather conditions prevent the collection of samples during a specific quarter. Adverse weather conditions are those that are dangerous or create inaccessibility for personnel, or situations that otherwise make sampling impractical, such as drought or extended frozen conditions. Documentation of the rationale for no visual assessment for the quarter must be included in the facility-specific SWPPP.

Please contact Holly Wheeler at 667-1312 (hbenson@lanl.gov) if you have questions regarding the QVA documentation. Thank you for your assistance in meeting the requirements of the Laboratory's NPDES 2015 MSGP Permit.

<b>Sample information</b>							
30	Document the monitoring Period by using the Monitoring Period lookup table.		April May		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		4/30/16 between 20:00 to 24:00		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		4/30/16 between 20:00 to 24:00		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		5/2/16 15:45		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		0.36 in. no rain		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line.		Personnel were not present during non-working hours		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
90	Previous storm ended >72 hours before start of storm? If "Failed", provide reason in comments of this line.		Previous storm ended around 4/28/16, 0.2 in. light rain and hail		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<b>Parameters</b>							
110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If		course & fine		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

"other" is chosen from the lookup table, provide description in comments of this line.

160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

## Tasks

#	Description	Rating	Meas.	Initials	Failed	N/A	Complete
---	-------------	--------	-------	----------	--------	-----	----------

The result of this VA applies to associated SIOs as defined in the SWPPP, where applicable.

### Sample information

30	Document the monitoring Period by using the Monitoring Period lookup table.		April / May		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
35	Is visual assessment performed on an unfiltered sample? (Use filtered only if unfiltered unavailable.)				<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
40	Document the Date/Time Discharge began in the "Reading" field of this line (using mm/dd/yy hh:mm format).		4/30/16 between 20:00-24:00		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
50	Document the Date/time sample collected in the "Reading" field of this line (using mm/dd/yy hh:mm format).		4/30/16 between 20:00-24:00		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
60	Document the Date/time sample visually assessed in the "Reading" field of this line (using mm/dd/yy hh:mm format).		5/2/16 15:18		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
70	Document the nature of discharge using the Precipitation Type lookup table. Document the amount (in) in the "Reading" field of this line.		RAIN 0.36 in 0.28 in 4/30/16		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
80	Sample collected in first 30 minutes of discharge? If "Failed" or unknown, provide reason in comments of this line.		Personnel were not present during non-working hours		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
90	Previous storm ended >72 hours before start of storm? If "Failed" provide reason in comments of this line.		Previous storm ended 4/28/16, 0.21 in total precip 4/29/16		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

### Parameters

110	Is sample colorless? If "Failed", describe.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
120	Is sample odorless? If "Failed", document observation using the Odor lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
130	Is sample clear? If "Failed", document observation using the Clarity lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
140	Is sample free of floating solids? If "Failed", describe if raw or waste material(s) in the comments of this line.				<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
150	Is sample free of settled solids? If "Failed", document observation using the Settled Solids lookup table. If		Fine		<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

160	Is sample free of suspended solids? If "Failed", document observation using the Suspended Solids lookup table. If "other" is chosen from the lookup table, provide description in comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
170	Is sample foamless after gently shaking? If "Failed" describe foam color and location ('on the surface' or 'in the sample') in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
180	Is sample devoid of an oil sheen? If "Failed", describe color and thickness (e.g. flecks, globs) in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
190	Is sample free of other obvious indicators of pollution? If "Failed", describe in the comments of this line.	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
		<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Inspector's Title(s)	Insert Title		
Inspector's Contact Information	Insert Contact Info		
Inspector's Qualifications	Insert qualifications or add reference to the SWPPP		
Weather Information			
Weather at time of this inspection? <input type="checkbox"/> Clear <input type="checkbox"/> Cloudy <input type="checkbox"/> Rain <input type="checkbox"/> Sleet <input type="checkbox"/> Fog <input type="checkbox"/> Snow <input type="checkbox"/> High Winds <input type="checkbox"/> Other: _____ Temperature: _____			
Have any previously unidentified discharges of pollutants occurred since the last inspection? <input type="checkbox"/> Yes <input type="checkbox"/> No If yes, describe: Describe			
Are there any discharges occurring at the time of inspection? <input type="checkbox"/> Yes <input type="checkbox"/> No If yes, describe: Describe			

#### Control Measures

- Number the structural stormwater control measures identified in your SWPPP on your site map and list them below (add as many control measures as are implemented on-site). Carry a copy of the numbered site map with you during your inspections. This list will ensure that you are inspecting all required control measures at your facility.
- Describe corrective actions initiated, date completed, and note the person that completed the work in the Corrective Action Log.

	Structural Control Measure	Control Measure is Operating Effectively?	If No, In Need of Maintenance, Repair, or Replacement?	Corrective Action Needed and Notes (identify needed maintenance and repairs, or any failed control measures that need replacement)
1	Insert Control Measure Name	<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	Describe Corrective Actions
2		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
3		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
4		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
5		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
6		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
7		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
8		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
9		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
10		<input type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	

**Areas of Industrial Materials or Activities exposed to stormwater**

*Below are some general areas that should be assessed during routine inspections. Customize this list as needed for the specific types of industrial materials or activities at your facility.*

	Area/Activity	Inspected?	Controls Adequate (appropriate, effective, and operating)?	Corrective Action Needed and Notes
1	Material loading/unloading and storage areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	Describe Corrective Actions
2	Equipment operations and maintenance areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
3	Fueling areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
4	Outdoor vehicle and equipment washing areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
5	Waste handling and disposal areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
6	Erodible areas/construction	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
7	Non-stormwater/ illicit connections	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
8	Salt storage piles or pile containing salt	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
9	Dust generation and vehicle tracking	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
10	(Other)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
11	(Other)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
12	(Other)	<input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	

**Non Compliance**

Describe any incidents of non-compliance observed and not described above:

Describe Non-compliance

**Additional Control Measures**

Describe any additional control measures needed to comply with the permit requirements:

Describe Additional Controls Needed

Use this space for any additional notes or observations from the inspection:

# Stormwater Industrial Routine Facility Inspection Report

General Information			
Facility Name	TA54 Area G (West, Central, and East)		
NPDES Tracking No.	NMR 053195		
Date of Inspection	03/29/2016 through 03/31/2016	Start/End Time	09:36 /15:45 hrs
Inspector's Name(s)	David Schrock		
Inspector's Title(s)	DSESH-EWMO DEP		
Inspector's Contact Information	505-665-6547		
Inspector's Qualifications	CISEC #1762		
Weather Information			
<b>Weather at time of this inspection?</b> <input type="checkbox"/> Clear <input checked="" type="checkbox"/> Cloudy <input type="checkbox"/> Rain <input type="checkbox"/> Sleet <input type="checkbox"/> Fog <input type="checkbox"/> Snow <input checked="" type="checkbox"/> High Winds after 11:15 AM on 3/29/2016 <input type="checkbox"/> Other:                      Temperature:    45, 23, and 43F			
<b>Have any previously unidentified discharges of pollutants occurred since the last inspection?</b> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <b>If yes, describe:</b>			
<b>Are there any discharges occurring at the time of inspection?</b> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <b>If yes, describe:</b>			

### Control Measures

- Number the structural stormwater control measures identified in your SWPPP on your site map and list them below (add as many control measures as are implemented on-site). Carry a copy of the numbered site map with you during your inspections. This list will ensure that you are inspecting all required control measures at your facility.
- Describe corrective actions initiated, date completed, and note the person that completed the work in the Corrective Action Log.

	Structural Control Measure	Control Measure is Operating Effectively?	If No, In Need of Maintenance, Repair, or Replacement?	Corrective Action Needed and Notes (identify needed maintenance and repairs, or any failed control measures that need replacement)
1	Earthen berms W, S and E of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
2	Rock check dams E of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
3	Rock check dams and ponds W and S of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
4	Drop inlets, sediment pond, and rock berm E of Dome 224	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
5	Rock check dams S of Dome 153	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
6	Asphalt rundown NE of Dome 153	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	

	Structural Control Measure	Control Measure is Operating Effectively?	If No, In Need of Maintenance, Repair, or Replacement?	Corrective Action Needed and Notes (identify needed maintenance and repairs, or any failed control measures that need replacement)
7	Wattles along the north perimeter fence N of Pit 38	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
8	Rip-rap N & NE of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
9	Concrete rundown, Rock rundown, and Sediment pond E of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
10	Rock check dams and Culverts S of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
11	Rock check dams, Sediment ponds, and rock rundown E of Muster Station 2	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
12	Rock check dams, sediment trap, bar ditch, and culverts S of the gabion weir	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
13	Rock blanket, Inlet and outlet pipes, and concrete channel S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
14	Concrete channel W of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
15	Rock rundown between the W concrete channel and pond at the gabion weir S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
16	Gabion weir S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
17	Rock blanket between the gabion weir and the series of sediment traps S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
18	Sediment traps and ponds S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
19	CMP velocity dissipater and culvert under pond overflow to 54-G-3	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement

22	Earthen berm W of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
23	Swale S of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
24	Rock check dams and ponds S of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	

**Areas of Industrial Materials or Activities exposed to stormwater**

*Below are some general areas that should be assessed during routine inspections. Customize this list as needed for the specific types of industrial materials or activities at your facility.*

	Area/Activity	Inspected?	Controls Adequate (appropriate, effective, and operating)?	Corrective Action Needed and Notes
1	Material loading/unloading and storage areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
2	Equipment operations and maintenance areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
3	Fueling areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
4	Outdoor vehicle and equipment washing areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
5	Waste handling and disposal areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
6	Erodible areas/construction	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
7	Non-stormwater/ illicit connections	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
8	Salt storage piles or pile containing salt	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
9	Dust generation and vehicle tracking	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	

### Non-Compliance

Describe any incidents of non-compliance observed and not described above:

No non-compliance incidences observed.

### Additional Control Measures

Describe any additional control measures needed to comply with the permit requirements:

No additional control measures need to comply with the permit.

### Notes

Use this space for any additional notes or observations from the inspection:

Observation 1. Although the vegetative layer is greater than 75% behind Dome 375, there are some skinned areas from a recent mowing and on a "watch" via the next Quarterly Visual Assessment (QVA)/after a rain event.

Observation 2. With EPC-CP concurrence, except the silt fence and wattles along the perimeter fence north of Pit 38, silt fencing has been removed from the SWPPP maps.

Observation 3. Good housekeeping practices observed include closed containerized waste and covered metal/material.

### CERTIFICATION STATEMENT

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

## Stormwater Industrial Routine Facility Inspection Report

General Information			
Facility Name	TA54 Area G (West, Central, and East)		
NPDES Tracking No.	NMR 053195		
Date of Inspection	06-21-2016/06-27-2016	Start/End Time	11:15/13:35 hrs
Inspector's Name(s)	David Schrock		
Inspector's Title(s)	DSESH-EWMO DEP		
Inspector's Contact Information	505-665-6547		
Inspector's Qualifications	CISEC #1762		
Weather Information			
<b>Weather at time of this inspection?</b> <input checked="" type="checkbox"/> Clear <input type="checkbox"/> Cloudy <input type="checkbox"/> Rain <input type="checkbox"/> Sleet <input type="checkbox"/> Fog <input type="checkbox"/> Snow <input type="checkbox"/> High Winds <input type="checkbox"/> Other: _____ Temperature: 71, 87 F			
<b>Have any previously unidentified discharges of pollutants occurred since the last inspection?</b> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <b>If yes, describe:</b> _____			
<b>Are there any discharges occurring at the time of inspection?</b> <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <b>If yes, describe:</b> _____			

### Control Measures

- Number the structural stormwater control measures identified in your SWPPP on your site map and list them below (add as many control measures as are implemented on-site). Carry a copy of the numbered site map with you during your inspections. This list will ensure that you are inspecting all required control measures at your facility.
- Describe corrective actions initiated, date completed, and note the person that completed the work in the Corrective Action Log.

	Structural Control Measure	Control Measure is Operating Effectively?	If No, In Need of Maintenance, Repair, or Replacement?	Corrective Action Needed and Notes (identify needed maintenance and repairs, or any failed control measures that need replacement)
1	Earthen berms W, S and E of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
2	Rock check dams E of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
3	Rock check dams and ponds W and S of Dome 49	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
4	Drop inlets, sediment pond, and rock berm E of Dome 224	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
5	Rock check dams S of Dome 153	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
6	Asphalt rundown NE of Dome 153	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	

	<b>Structural Control Measure</b>	<b>Control Measure is Operating Effectively?</b>	<b>If No, In Need of Maintenance, Repair, or Replacement?</b>	<b>Corrective Action Needed and Notes</b> (identify needed maintenance and repairs, or any failed control measures that need replacement)
7	Wattles along the north perimeter fence N of Pit 38	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
8	Rip-rap N & NE of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
9	Concrete rundown, Rock rundown, and Sediment pond E of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
10	Rock check dams and Culverts S of Dome 33	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
11	Rock check dams, Sediment ponds, and rock rundown E of Muster Station 2	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
12	Rock check dams, sediment trap, bar ditch, and culverts S of the gabion weir	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
13	Rock blanket, Inlet and outlet pipes, and concrete channel S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
14	Concrete channel W of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
15	Rock rundown between the W concrete channel and pond at the gabion weir S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
16	Gabion weir S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
17	Rock blanket between the gabion weir and the series of sediment traps S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
18	Sediment traps and ponds S of Dome 375	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
19	CMP velocity dissipater and culvert under pond overflow to 54-G-3	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
20	CMP velocity dissipater	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair	

	Structural Control Measure	Control Measure is Operating Effectively?	If No, In Need of Maintenance, Repair, or Replacement?	Corrective Action Needed and Notes (identify needed maintenance and repairs, or any failed control measures that need replacement)
	and culvert under access road to pond at 54-G-3		<input type="checkbox"/> Replacement	
21	Concrete berms E and W of the TWISP Domes	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
22	Earthen berm W of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
23	Swale S of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	
24	Rock check dams and ponds S of the east access gate	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	<input type="checkbox"/> Maintenance <input type="checkbox"/> Repair <input type="checkbox"/> Replacement	

**Areas of Industrial Materials or Activities exposed to stormwater**

*Below are some general areas that should be assessed during routine inspections. Customize this list as needed for the specific types of industrial materials or activities at your facility.*

	Area/Activity	Inspected?	Controls Adequate (appropriate, effective, and operating)?	Corrective Action Needed and Notes
1	Material loading/unloading and storage areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
2	Equipment operations and maintenance areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
3	Fueling areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
4	Outdoor vehicle and equipment washing areas	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
5	Waste handling and disposal areas	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
6	Erodible areas/construction	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
7	Non-stormwater/ illicit connections	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
8	Salt storage piles or pile containing salt	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No	
9	Dust generation and vehicle tracking	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	

### Non-Compliance

Describe any incidents of non-compliance observed and not described above:

No non-compliance incidences observed.

### Additional Control Measures

Describe any additional control measures needed to comply with the permit requirements:

No additional control measures need to comply with the permit.

### Notes

Use this space for any additional notes or observations from the inspection:

Observation 1: Continue the Watch of the vegetative growth area behind Dome 375 has been on a "watch" since the last Quarterly Visual Assessment (QVA) 3/31/16. Vegetative layer is growing back--no erosion observed.

Observation 2: With EPC-CP concurrence, the silt fencing has been removed from the SWPPP maps.

Observation 3: Good housekeeping practices observed include closed containerized waste and covered metal/material.

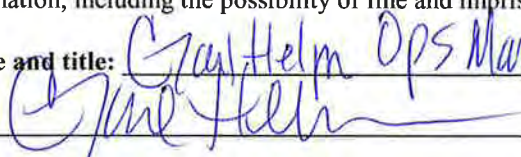

### CERTIFICATION STATEMENT

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

## Summary of past year's inspections, assessments, and corrective actions

1. Provide a summary of your past year's routine facility inspection documentation (see Part 3.1.2 of the permit). In addition, if you are an operator of an airport facility (Sector S) that is subject to the airport effluent limitations guidelines, and are complying with the MSGP Part 8.S.8.1 effluent limitation through the use of non-urea-containing deicers, provide a statement certifying that you do not use airfield pavement deicers containing urea (e.g., "*I certify that [name of airport] is in compliance with the effluent limitation guideline for airfield pavement deicing by not using airfield pavement deicers that contain urea.*"). [Note: Operators of airport facilities that are complying with Part 8.S.8.1 by meeting the numeric effluent limitation for ammonia do not need to include this statement.] \*

Los Alamos National Laboratory (LANL), operated by Los Alamos National Security, LLC (LANS), consists of 14 active industrial sites that operate under 8 different Sectors (A, D, F, K, N, O, P, and AA). All 14 active sites were inspected according to the schedules identified in the site-specific SWPPPs. The 26 sites that qualify for a conditional exclusion for no exposure were inspected between December 1st and 22nd, 2016. A total of 198 inspections and/or evaluations resulting in corrective actions were conducted at a total of 40 sites as follows:  
TA-3-22 Power and Steam Plant – 20; TA-3-29 Indoor TSD and Machine Shop – 1; TA-3-30 Warehouse – 2; TA-3-34-Metal Shop -1; TA-3-38 Carpenter Shop – 13; TA-3-38 Metals Fab Shop – 16; TA-3-39 and 102 Metal Shop – 7; TA-3-40, Room 1315 Machine Shop – 1; TA-3-66 Sigma Facility – 7; TA-3-2206 Warehouse – 1; TA-9-28 Heavy Equipment Maintenance – 1; TA-14-23 Burn Cage – 1; TA-15-313 Machine Shop – 1; TA-22-52 Machine Shop – 1; TA-33-39 Machine Shop – 1; TA-33-113 Machine Shop – 1; TA-35-2 Machine Shop – 1; TA-35-125 Machine Shop – 1; TA-46-31 Machine Shop – 1; TA-48-8 Machine Shop – 1; TA-50-54 Machine Shop – 1; TA-50-69 TSD – 1; TA-53-2 Machine Shop – 2; TA-53-3 Machine Shop – 1; TA-53-16 Machine Shop – 1; TA-53-26 Machine Shop – 1; TA-54-38 Indoor TSD – 1; TA-54 Area L – 8; TA-54 Area G – 13; TA-54 Maintenance Facility West – 6; TA-54 RANT – 9; TA-55-3 Metal Shop – 1; TA-55-5 Warehouse – 1; TA-55-268 Warehouse – 1; TA-55-314 Warehouse – 1; TA-60 Asphalt Batch Plant – 12; TA-60 MRF – 14; TA-60 Roads and Grounds – 12; TA-60-1 Heavy Equipment Yard – 19; and TA-60-2 Warehouse – 16.

2. Provide a summary of your past year's quarterly visual assessment documentation (see Part 3.2.2 of the permit) \*

A total of 668 visual assessments were completed at 66 different outfalls. Evidence of an oil sheen was observed in four samples: Outfall 021 on 11/04/2016, Outfall 024 on 09/07/2016 and 11/04/2016, and Outfall 052 on 05/02/2016. No other evidence of pollutants was observed.

3. For any four-sample (minimum) average benchmark monitoring exceedance, if after reviewing the selection, design, installation and implementation of your control measures and considering whether any modifications are necessary to meet the effluent limits in the permit, you determine that no further pollutant reductions are technologically available and economically practicable and achievable in light of best industry practice, provide your rationale for why you believe no further reductions are achievable (see Part 6.2.1.2 of the permit). Enter "NA" if not applicable. \*

NA

4. Provide a summary of your past year's corrective action documentation (See Part 4.4 of the permit). (Note: If corrective action is not yet completed at the time of submission of this annual report, you must describe the status of any outstanding corrective action(s).) Also describe any incidents of noncompliance in the past year or currently ongoing, or if none, provide a statement that you are in compliance with the permit. \*

A total of 198 inspections and/or evaluations resulting in corrective actions were conducted at a total of 40 sites with the following total count of conditions observed:

Unauthorized Release or Discharge – 24; Control Measures Needing Maintenance, Repairs, or Replacement – 48; Additional Control Measures Needed – 2; Control Measures Inadequate to Meet Non-Numeric Effluent Limitations – 63; Incidents of Noncompliance [New Mexico Water Quality Standard (NM WQS) Exceedances – 23; Incidents of Noncompliance: Average Exceeds or is Average Exceeds or is Mathematically Certain to Exceed Benchmark Value – 6; Average Exceeds or is Mathematically Certain to Exceed Benchmark Value – 23.

At this time, there are only 2 outstanding corrective actions, both identified on December 19, 2016 and proposed for completion by February 2, 2017.

Regarding incidents of noncompliance, 28 monitored constituents from different outfalls exceeded an individual New Mexico Water Quality Standard (NM WQS). In addition, 9 monitored quarterly benchmark constituent value exceedances occurred where the benchmark value was modified to reflect a NM WQS per Section 9.6.2.1. Corrective actions to address these exceedances have been completed.

LANL consists of 14 sites under 8 Sectors (A, D, F, K, N, O, P, AA). As specified in a letter to EPA dated Nov 24, 2015, (ENV-DO-15-0328), LANL is providing information collected from the 2015 Comprehensive Site Inspection along with other documentation identified in Part 7.5 of the 2015 MSGP. All 14 sites, one inactive site and 25 sites that qualify for a conditional exclusion for no exposure were inspected Sept 8th-29th, 2015. The active sites became authorized to discharge stormwater under the 2015 MSGP on Oct 3, 2015. Routine inspections were then conducted at these sites in accordance with the 2015 MSGP. Corrective actions identified at all sites between Sept 1 and Dec 31, 2015 are summarized below. An evaluation of analytical monitoring data for the 2015 calendar year is included below.

Power & Steam Plant: Insp-4, Ctrls Maint, Repair, Repl-3, Ctrls Inad to Meet Non-Num. Eff Limit-1; TA-3-34 Metal Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-3-38 Carpenter Shop: Insp-5, Discharges During Insp-1; TA-3-38 Metals Fab Shop: Insp-7, Discharges During Insp-2, Pollutants Entering Drainage-2, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-3-39 & 102 Metal Shop: Insp-2, Ctrls Inad to Meet Non-Num Eff Limit-1; Sigma Facility: Insp-3, Discharges During Insp-2, Ctrls Inad to Meet Non-Num Eff Limit-4; Heavy Equipment Maintenance: Insp-1, Discharges During Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-15-313 Machine Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-33-113 Machine Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-46-31 Machine Shop: Insp-1, Discharges During Insp-1, Ctrls Maint, Repair, Repl-1, Ctrls Inad to Meet Non-Num Eff Limit-3; TA-48-8 Machine Shop: Insp-1, Ctrls Maint, Repair, Repl-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-53-2 Machine Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-3; TA-53-16 Machine Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-53-18 Machine Shop: Insp-1, Ctrls Maint, Repair, Repl-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-53-26 Machine Shop: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-1; TA-53-39 Shop & Storage Bldg: Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-2; TA-54 Area L: Insp-3, Discharges During Insp-1, Ctrls Maint, Repair, Repl-1, Ctrls Inad to Meet Non-Num Eff Limit-2; Area G: Insp-9, Discharges During Insp-5, Ctrls Maint, Repair, Repl-3; Maintenance Facility West: Insp-4, Discharges During Insp-2, Ctrls Inad to Meet Non-Num Eff Limit-1, NonComp (NM WQS Exceed Al, Cu)-2\*; RANT: Insp 2; Asphalt Batch Plant: Insp-5, Discharges During Insp-1, Ctrls Maint, Repair, Repl-1, Ctrls Inad to Meet Non-Num Eff Limit-1, NonComp (ELG Exceed TSS)-4\*\*; MRF: Insp-6, Discharges During Insp-1, Ctrls Inad to Meet Non-Num Eff Limit-3; Roads & Grounds: Insp-6, Discharges During Insp-2, Ctrls Maint, Repair, Repl-5, Ctrls Inad to Meet Non-Num Eff Limit-9, NonComp (NM WQS Exceed TI)-1; Heavy Equipment Yard: Insp-6, Discharges During Insp-1, Ctrls Maint, Repair, Repl-5, Ctrls Inad to Meet Non-Num Eff Limit-7; TA-60-2 Whse: Insp-5, Discharges During Insp-1, Prev Unidentified Discharges-1, Ctrls Inad to Meet Non-Num Eff Limit-4.

\*Per Part 6.2.4.2 of the 2008 MSGP, LANL ceased monitoring for aluminum and copper at outfall 049, due to their presence below LANL background values submitted to EPA on November 4, 2010 (ENV-RCRA-10-215, LA-UR-10-07291).

\*\*The 30-day avg. effluent limit was exceeded for TSS from rain events on 7/7, 7/15 and 7/20/2015, which were the only discharges that occurred during the second monitoring period at this facility. A subsequent sample was collected on 8/8/2015, which exceeded the daily max. effluent limit for TSS. This sample was collected before analytical results were received for the previous ELG monitoring. An Exceedance Report for Numeric Effluent Limits was sent to EPA on 9/17/2015 (ENV-DO-15-0254, LA-UR # 15-27266). Corrective actions are identified in the report.  
LA-UR-16-20466

2. Provide a summary of your past year's quarterly visual assessment documentation (see Part 3.3.2 of the permit) \*

A total of 91 quarterly visual assessments were completed at 38 different outfalls. No obvious indicators of pollutants were present in any of these samples.  
LA-UR-16-20466

3. For any four-sample (minimum) average benchmark monitoring exceedance, if after reviewing the selection, design, installation and implementation of your control measures and considering whether any modifications are necessary to meet the effluent limits in the permit, you determine that no further pollutant reductions are technologically available and economically practicable and achievable in light of best industry practice, provide your rationale for why you believe no further reductions are achievable (see Part 6.2.1.2 of the permit). \*

At this time, LANL is not seeking to determine that no further pollutant reductions are technologically available and economically practicable and achievable in light of best industry practice. Therefore, no rationale is provided.  
LA-UR-16-20466

4. Provide a summary of your past year's corrective action documentation (See Part 4.3 of the permit). (Note: If corrective action is not yet completed at the time of submission of this annual report, you must describe the status of any outstanding corrective action(s).) Also describe any incidents of noncompliance in the past year or currently ongoing, or if none, provide a statement that you are in compliance with the permit. \*

Please see the response to Section 1 for a summary of corrective action documentation including unauthorized releases, discharges that violate a numeric effluent limit, control measures that were not stringent enough for the discharge to meet applicable water quality standards or the non-numeric effluent limits, and instances where control measures were never installed, were installed incorrectly or not in accordance with Parts 2 and/or 8 of the 2015 MSGP, or were not being properly operated or maintained. Regarding incidents of noncompliance, two ELG exceedances occurred at the TA-60 Asphalt Batch Plant. An Exceedance Report for Numeric Effluent Limits was sent to EPA on 9/17/2015 (ENV-DO-15-0254, LA-UR # 15-27266). Corrective actions are identified in the report. Specifics relative to these exceedances are contained in the footnote to the table in response to Section 1 above. In addition, one New Mexico Water Quality Standard (WQS) exceedance occurred for Thallium at TA-60 Roads and Grounds. The other New Mexico WQS exceedances identified in Section 1 above are below natural background for LANL. All corrective actions identified during calendar year 2015 are closed.

To whom it may concern:

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) Industrial Discharge Monitoring Report (MDMR) For April 12, 2016**

Enclosed is Los Alamos National Laboratory's MDMR (Enclosure 1) for April 12, 2016, as required under MSGP Permit Tracking No. NMR053195, submitted on behalf of Los Alamos National Security LLC. This MDMR is for the first quarter of the 2016 monitoring year and contains analytical results for quarterly benchmark monitoring at outfall 050. Rain was measured at 0.02 inches for a duration of 15 minutes associated with the TA-54 meteorology tower, which is below the nearest tenth of an inch and hour duration identified on the MDMR (Appendix K of the 2015 MSGP) as required reporting parameters.

Please contact Holly Wheeler at (505) 667-1312 or Terrill Lemke at (505) 665-2397 if you have questions regarding this MDMR.

Sincerely,

Anthony R. Grieggs  
Group Leader

# **ENCLOSURE 1**

**NPDES Permit Tracking No NMR053195,  
MDMR for April 12, 2016**

**EPC-DO-16-169**

**LA-UR-16-24245**

**Date:**     JUN 17 2016

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.

Name of EPA staff person that granted the waiver:

Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input checked="" type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u> |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

**F. Monitoring Information**

Note: Make additional copies of this form as necessary.

 1. Nature of Discharge: ☒ Rainfall (Complete line items 2.a., 2.b., & 2.c.) ☐ Snowmelt

2.a. Duration of the rainfall event (hours): 0      2.b. Rainfall amount (inches): 0.0      2.c. Time since previous measurable storm event (days): 121

3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
050	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Arsenic, dissolved	ND		1.70 ug/L	04/12/2016	<input type="checkbox"/>	<input type="checkbox"/>
050	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Cadmium, dissolved	BQL		1.00 ug/L	04/12/2016	<input type="checkbox"/>	<input type="checkbox"/>
050	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Lead, dissolved	ND		0.500 ug/L	04/12/2016	<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 0.00 hours. Rainfall amount = 0.00 inches.

050: Scattered isolated rain showers occurred, resulting in recorded rainfall on only portions of the site.

## G. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) Industrial Discharge Monitoring Reports (MDMRs) For April 15, 18 and 19, 2016 and a "No Discharge" Report For April 1 through May 31, 2016**

Enclosed are Los Alamos National Laboratory's MDMRs (Enclosure 1) for April 15, 18 and 19, 2016, and a "no discharge" MDMR for the end of the first quarter of monitoring (April 1, 2016 through May 31, 2016) as required under MSGP Permit Tracking No. NMR053195, submitted on behalf of Los Alamos National Security LLC. These MDMRs contain analytical results for impaired water and quarterly benchmark monitoring at outfalls 018, 026, 029, 004, 032, 002, and 009.

Please contact Holly Wheeler at (505) 667-1312 or Terrill Lemke at (505) 665-2397 if you have questions regarding these MDMRs.

Sincerely,

Anthony R. Grieggs

026	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Thallium, dissolved	ND		0.450 ug/L	04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>
027	<input checked="" type="checkbox"/> Substantially identical to outfall: 026	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>
028	<input checked="" type="checkbox"/> Substantially identical to outfall: 026	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.58 hours. Rainfall amount = 0.24 inches.

026: The impaired water pollutant dissolved Copper exceeds the New Mexico water quality standard. The impaired water pollutant dissolved Thallium was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for dissolved Thallium will be discontinued per Part 6.2.4.1.

**F. Monitoring Information**

Note: Make additional copies of this form as necessary.

 1. Nature of Discharge: ☒ Rainfall (Complete line items 2.a., 2.b., & 2.c.) ☐ Snowmelt

2.a. Duration of the rainfall event (hours): 2      2.b. Rainfall amount (inches): 0.2      2.c. Time since previous measurable storm event (days): 7

3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
029	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Copper, dissolved	34.4	ug/L		04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>
029	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Copper, dissolved	34.4	ug/L		04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>
029	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Lead, dissolved	BQL		2.00 ug/L	04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>
029	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Thallium, dissolved	ND		0.450 ug/L	04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>
029	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Zinc, dissolved	1530	ug/L		04/15/2016	<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.58 hours. Rainfall amount = 0.24 inches.

029: The impaired water pollutant dissolved Copper exceeds the New Mexico water quality standard. The average concentration of dissolved Copper is mathematically certain to exceed the benchmark value. The impaired water pollutant dissolved Thallium was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for dissolved Thallium will be discontinued per Part 6.2.4.1. The average concentration of dissolved Zinc is mathematically certain to exceed the benchmark value.

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSQP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input checked="" type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u> |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

## F. Monitoring Information

To whom it may concern:

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) Industrial Discharge Monitoring Reports (MDMRs) For April 29 and May 06, 2016**

Enclosed are Los Alamos National Laboratory's MDMRs (Enclosure 1) for April 29 and May 06, 2016, as required under MSGP Permit Tracking No. NMR053195, submitted on behalf of Los Alamos National Security LLC. These MDMRs contain analytical results for impaired water and quarterly benchmark monitoring at outfalls 005, 029, 032, and 050.

Relative to the duration of the rainfall event and rainfall amount being zero, no rain was measured at LANS' Meteorological Network. However, the sample was collected early in the morning (04:09) and no releases were reported. Our Meteorologist evaluated regional radar and found that there was a storm cell overhead during that time. In addition, facility personnel reported the site was wet when they arrived for work that morning; therefore, the sample was analyzed as a monitoring sample.

Please contact Holly Wheeler at (505) 667-1312 or Terrill Lemke at (505) 665-2397 if you have questions regarding these MDMRs.

Sincerely,

Anthony R. Grieggs  
Group Leader  
Environmental Compliance Programs (EPC-CP)

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input checked="" type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u> |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt										
2.a. Duration of the rainfall event (hours): 2      2.b. Rainfall amount (inches): 0.2      2.c. Time since previous measurable storm event (days): 11										
3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
005	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Copper, dissolved	11.8	ug/L		04/29/2016	<input type="checkbox"/>	<input type="checkbox"/>
005	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Thallium, dissolved	ND		0.450 ug/L	04/29/2016	<input type="checkbox"/>	<input type="checkbox"/>
006	<input checked="" type="checkbox"/> Substantially identical to outfall: 005	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.67 hours. Rainfall amount = 0.24 inches.

005: The impaired water pollutant dissolved Copper exceeds the New Mexico water quality standard. The impaired water pollutant dissolved Thallium was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for dissolved Thallium will be discontinued per Part 6.2.4.1.

**F. Monitoring Information**

Note: Make additional copies of this form as necessary.

1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos

State: NM

ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period:

Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:

☐ Quarter 1 (January 1 - March 31)

Quarter 1: From

04

/ 01

To

05

/ 31

☐ Quarter 2 (April 1 - June 30)

Quarter 2: From

06

/ 01

To

07

/ 31

☐ Quarter 3 (July 1 - September 30)

Quarter 3: From

08

/ 01

To

09

/ 30

☐ Quarter 4 (October 1 - December 31)

Quarter 4: From

10

/ 01

To

11

/ 30

2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater?

Yes ( Skip to 3)

No ( Skip to 4)

3. What is the hardness level of the receiving water?

57

4. Does your facility discharge into any saltwater receiving waters?

Yes

No

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt										
2.a. Duration of the rainfall event (hours): 0      2.b. Rainfall amount (inches): 0.2      2.c. Time since previous measurable storm event (days): 14

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

- Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.
- ☒ The owner/operator has issues regarding available computer access or computer capability.

Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016

\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

- ☒ Submitting monitoring data (Fill in all Sections).
- ☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).
- ☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).
- ☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).
- ☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Aluminum, total recoverable	1400	ug/L		06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Iron, total	3640	ug/L		06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Nitrate plus Nitrite Nitrogen	1.39	mg/L		06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.33 hours. Rainfall amount = 0.20 inches.

002: Aluminum, total recoverable (I) - NODI 9. The average concentration of total Iron is mathematically certain to exceed the benchmark value. This is for storm events on 04/19/2016 and 06/04/2016.

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt										
2.a. Duration of the rainfall event (hours): 1      2.b. Rainfall amount (inches): 0.2      2.c. Time since previous measurable storm event (days): 3										
3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
022	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Adjusted Gross Alpha	1.36	pCi/L		06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
022	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Aluminum, total recoverable	2960	ug/L		06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
022	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	I	Aroclor, total	ND		0.0347 ug/L	06/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
021	<input checked="" type="checkbox"/> Substantially identical to outfall: 022	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>
023	<input checked="" type="checkbox"/> Substantially identical to outfall: 022	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>
024	<input checked="" type="checkbox"/> Substantially identical to outfall: 022	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>
025	<input checked="" type="checkbox"/> Substantially identical to outfall: 022	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.33 hours. Rainfall amount = 0.20 inches.

022: The impaired water pollutant dissolved total recoverable Aluminum exceeds the New Mexico water quality standard. The impaired water pollutant total Aroclor was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for total Aroclor will be discontinued per Part 6.2.4.1.

### G. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input checked="" type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u> |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 0.75 hours. Rainfall amount = 0.24 inches.

051: The impaired water pollutant total recoverable Aluminum exceeds the New Mexico water quality standard. The impaired water pollutant total Aroclor was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for total Aroclor will be discontinued per Part 6.2.4.1. The average concentration of total Magnesium is mathematically certain to exceed the benchmark value.

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Street: P.O. Box 1663, MS K490City: Los AlamosState: NMZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input checked="" type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u> |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

- Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.
- ☒ The owner/operator has issues regarding available computer access or computer capability.

Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016

\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

- ☒ Submitting monitoring data (Fill in all Sections).
- ☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).
- ☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).
- ☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).
- ☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MS GP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NMZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location: Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -     

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input checked="" type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u> |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location: Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input checked="" type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u> |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 1.42 hours. Rainfall amount = 0.28 inches.

012: The impaired water pollutant total recoverable Aluminum exceeds the New Mexico water quality standard. The impaired water pollutant total Aroclor was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for total Aroclor will be discontinued per Part 6.2.4.1. The average concentration of total Iron is mathematically certain to exceed the benchmark value. The impaired water pollutant dissolved Thallium was not detected in stormwater discharge from this outfall. Therefore, annual monitoring for dissolved Thallium will be discontinued per Part 6.2.4.1.

## F. Monitoring Information

Note: Make additional copies of this form as necessary.

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) "No Discharge" Industrial Discharge Monitoring Report (MDMR) for Quarter 3 (August 1 through September 30, 2016)**

Enclosed is Los Alamos National Laboratory's "No Discharge" MDMR (Enclosure 1) for Quarter 3 (August 1 through September 30, 2016), as required under MSGP Permit Tracking No. NMR053195. This report is being submitted on behalf of Los Alamos National Security LLC and identifies outfalls for which no discharge occurred during the identified monitoring period.

Please contact Holly Wheeler at (505) 667-1312 or Terrill Lemke at (505) 665-2397 if you have questions regarding this MDMR.

Sincerely,

Anthony R. Grieggs

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input checked="" type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u> |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>            |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

F. Monitoring Information										
Note: Make additional copies of this form as necessary.										
1. Nature of Discharge: <input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.) <input type="checkbox"/> Snowmelt

# **ENCLOSURE 1**

**NPDES Permit Tracking No. NMR053195, MDMRs  
for October 08 and 09, 2016**

**EPC-DO-16-385**

**LA-UR-16-29420**

**Date: DEC 14 2016**

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*?
- ☒
- YES
- ☐
- NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.☒ The owner/operator has issues regarding available computer access or computer capability.Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016**\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>**

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

☒ Submitting monitoring data (Fill in all Sections).☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 -Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312

Ext. \_\_\_\_\_

E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:

<input type="checkbox"/> Quarter 1 (January 1 – March 31)	<input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>
<input type="checkbox"/> Quarter 2 (April 1 – June 30)	<input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>
<input type="checkbox"/> Quarter 3 (July 1 – September 30)	<input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>
<input type="checkbox"/> Quarter 4 (October 1 – December 31)	<input checked="" type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u>

2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)

3. What is the hardness level of the receiving water? 57

4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

F. Monitoring Information										Note: Make additional copies of this form as necessary.		
1. Nature of Discharge:		<input checked="" type="checkbox"/> Rainfall (Complete line items 2.a., 2.b., & 2.c.)		<input type="checkbox"/> Snowmelt								
2.a. Duration of the rainfall event (hours):		1		2.b. Rainfall amount (inches):		0.1		2.c. Time since previous measurable storm event (days):			6	
3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?		
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Aluminum, total recoverable	348	ug/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>		
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Iron, total	458	ug/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>		
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Nitrate plus Nitrite Nitrogen	1.16	mg/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>		
002	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Zinc, dissolved	324	ug/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>		

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)  
Rainfall duration = 1.08 hours. Rainfall amount = 0.14 inches.

002: The average concentration of total Nitrate plus Nitrite Nitrogen is mathematically certain to exceed the benchmark value. The average concentration of dissolved Zinc is mathematically certain to exceed the benchmark value. Adjusted Gross Alpha (I) - NODI 9. Aroclor, total (I) - NODI B. Copper, dissolved (I) - NODI B. Aluminum, total recoverable (I) - NODI 9.

F. Monitoring Information										Note: Make additional copies of this form as necessary.			
1. Nature of Discharge:		Rainfall (Complete line items 2.a., 2.b., & 2.c.)								Snowmelt			
2.a. Duration of the rainfall event (hours):		1		2.b. Rainfall amount (inches):		0.1		2.c. Time since previous measurable storm event (days):		6			
3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?			
009	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Iron, total	627	ug/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>			
007	<input checked="" type="checkbox"/> Substantially identical to outfall: 009	<input checked="" type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>			
008	<input checked="" type="checkbox"/> Substantially identical to outfall: 009	<input checked="" type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>			
010	<input checked="" type="checkbox"/> Substantially identical to outfall: 009	<input checked="" type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>			

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)  
Rainfall duration = 1.08 hours. Rainfall amount = 0.14 inches.

009: Adjusted Gross Alpha (I) - NODI 9. Aluminum, total recoverable (I) - NODI 9. Aroclor, total (I) - NODI B. Copper, dissolved (I) - NODI 9. Thallium, dissolved (I) - NODI 9.

**F. Monitoring Information** Note: Make additional copies of this form as necessary.

1. Nature of Discharge: ☒ Rainfall (Complete line items 2.a., 2.b., & 2.c.) ☐ Snowmelt

2.a. Duration of the rainfall event (hours): 1 2.b. Rainfall amount (inches): 0.1 2.c. Time since previous measurable storm event (days): 22

3.a. Outfall ID (list the same 3- digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
069	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Ammonia, total	1.59	mg/L		10/08/2016	<input type="checkbox"/>	<input type="checkbox"/>

## G. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

\* (QBM) - Quarterly benchmark monitoring: (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)  
Rainfall duration = 5.00 hours. Rainfall amount = 0.55 inches.

051: The average of four monitoring values for total Ammonia does not exceed the benchmark value, therefore quarterly monitoring will be discontinued per Part 6.2.1.2. The average of four monitoring values for total Cyanide does not exceed the benchmark value, therefore quarterly monitoring will be discontinued per Part 6.2.1.2. The average concentration of total Magnesium is mathematically certain to exceed the benchmark value. The average of four monitoring values for total Mercury does not exceed the benchmark value, therefore quarterly monitoring will be discontinued per Part 6.2.1.2. The average of four monitoring values for total Selenium does not exceed the benchmark value, therefore quarterly monitoring will be discontinued per Part 6.2.1.2. Aluminum, total recoverable (I) - NODI 9. Aroclor, total (I) - NODI B.

## G. Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

**NMR053195, Multi-Sector General Permit (MSGP) Industrial Discharge Monitoring**  
**Report (MDMR) for November 04, 2016**

To whom it may concern:

Enclosed is Los Alamos National Laboratory's MDMR (Enclosure 1) for November 04, 2016, as required under MSGP Permit Tracking No. NMR053195. This report is being submitted on behalf of Los Alamos National Security LLC and contains analytical results for quarterly benchmark monitoring at outfalls 005, 018, 029 and 047.

Please contact Holly Wheeler at (505) 667-1312 or Terrill Lemke at (505) 665-2397 if you have questions regarding this MDMR.

Sincerely,

Anthony R. Grieggs

## A. Approval to User Paper DMR Form

1. Have you been granted a waiver from electronic reporting from EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

- Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.
- ☒ The owner/operator has issues regarding available computer access or computer capability.

Name of EPA staff person that granted the waiver: Everett SpencerDate approval obtained: 06/17/2016

\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper DMR form. If you have not obtained a waiver, you must file this form electronically using the NetDMR at <http://www.epa.gov/netdmr/>

## B. Permit Information

1. NPDES ID: NMR053195

2. Reason(s) for Submission (Check all that apply):

- ☒ Submitting monitoring data (Fill in all Sections).
- ☐ Reporting no discharge for all outfalls for this monitoring period (Fill in Sections A, B, C, D, E.1, and G).
- ☐ Reporting that your site status has changed to inactive and unstaffed (Fill in Sections A, B, C, D, and F and include date of status change in comment field in Section F.4).
- ☐ Reporting that your site status has changed to active (Fill in all Sections and include date of status change in comment field in Section F.4).
- ☐ Reporting that no further pollutant reductions are achievable for all outfalls and for all pollutants via Part 6.2.1.2 of the MSGP (Fill in Sections A, B, C, D, and G).

## C. Facility Operator Information

## 1. Operator Information

Operator Name: Los Alamos National Security, LLC

Mailing Address:

Street: P.O. Box 1663, MS K490City: Los AlamosState: NM ZIP Code: 87545 - Phone: 505 667 0666E-mail: grieggst@lanl.gov

## 2. DMR Preparer (Complete if DMR was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: Holly L. WheelerOrganization: EPC-CPPhone: 505 667 1312Ext. E-mail: hbenson@lanl.gov

#### D. Facility Information

1. Facility Name: Los Alamos National Laboratory

2. Facility Address:

Street/Location Bikini Atoll Rd. SM30 K490

City: Los Alamos State: NM ZIP Code: 87545 -

County or Similar Government Subdivision: Los Alamos

#### E. Discharge Information

1. Identify monitoring period: ☒ Check here if proposing alternative monitoring periods due to irregular stormwater runoff. Identify alternative monitoring schedule and indicate for which alternative monitoring period you are reporting monitoring data:
- |  |  |
|--|--|
| <input type="checkbox"/> Quarter 1 (January 1 - March 31)    | <input type="checkbox"/> Quarter 1: From <u>04</u> / <u>01</u> To <u>05</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 2 (April 1 - June 30)       | <input type="checkbox"/> Quarter 2: From <u>06</u> / <u>01</u> To <u>07</u> / <u>31</u>            |
| <input type="checkbox"/> Quarter 3 (July 1 - September 30)   | <input type="checkbox"/> Quarter 3: From <u>08</u> / <u>01</u> To <u>09</u> / <u>30</u>            |
| <input type="checkbox"/> Quarter 4 (October 1 - December 31) | <input checked="" type="checkbox"/> Quarter 4: From <u>10</u> / <u>01</u> To <u>11</u> / <u>30</u> |
2. Are you required to monitor for cadmium, copper, chromium, lead, nickel, silver, or zinc in freshwater? ☒ Yes ( Skip to 3) ☐ No ( Skip to 4)
3. What is the hardness level of the receiving water? 57
4. Does your facility discharge into any saltwater receiving waters? ☐ Yes ☒ No

# F. Monitoring Information

Note: Make additional copies of this form as necessary.

1. Nature of Discharge: ☒ Rainfall (Complete line items 2.a., 2.b., & 2.c.) ☐ Snowmelt

2.a. Duration of the rainfall event (hours): 6 2.b. Rainfall amount (inches): 0.7 2.c. Time since previous measurable storm event (days): 27

3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
005	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Iron, total	618	ug/L		11/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
006	<input checked="" type="checkbox"/> Substantially identical to outfall: 005	<input type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>

\* (QBM) - Quarterly benchmark monitoring; (ELG) - Annual effluent limitations guidelines monitoring; (S/T) - State- or tribal-specific monitoring; (I) - Impaired waters monitoring; (O) - Other monitoring as required by EPA

4. Comment and/or Explanation of Any Violations (Reference all attachments here)

Rainfall duration = 6.00 hours. Rainfall amount = 0.71 inches.

005: Adjusted Gross Alpha (I) - NODI 9. Aluminum, total recoverable (I) - NODI 9. Aroclor, total (I) - NODI B. Copper, dissolved (I) - NODI 9. Thallium, dissolved (I) - NODI B.

# F. Monitoring Information

Note: Make additional copies of this form as necessary.

1. Nature of Discharge: ☒ Rainfall (Complete line items 2.a., 2.b., & 2.c.) ☐ Snowmelt

2.a. Duration of the rainfall event (hours): 6 2.b. Rainfall amount (inches): 0.7 2.c. Time since previous measurable storm event (days): 59

3.a. Outfall ID (list the same 3-digit outfalls identified on the NOI form)	3.b. Check if Any Outfalls are Substantially Identical to Other Outfalls Listed	3.c. Check if No Discharge	3.d. Monitoring Type QBM, ELG, S/T, I, O*	3.e. Parameter	3.f. Quality or Concentration	3.g. Units	3.h. Results Description	3.i. Collection Date	3.j. Exceedance due to natural background pollutant levels	3.k. No further pollutant reductions achievable?
018	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Aluminum, total recoverable	1960	ug/L		11/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
018	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Iron, total	1770	ug/L		11/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
018	<input type="checkbox"/> Substantially identical to outfall:	<input type="checkbox"/>	QBM	Nitrate plus Nitrite Nitrogen	0.171	mg/L		11/04/2016	<input type="checkbox"/>	<input type="checkbox"/>
013	<input checked="" type="checkbox"/> Substantially identical to outfall: 018	<input checked="" type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>
014	<input checked="" type="checkbox"/> Substantially identical to outfall: 018	<input checked="" type="checkbox"/>							<input type="checkbox"/>	<input type="checkbox"/>

**REVISION HISTORY**

Document No./Revision No.	Issue Date	Action	Description
SWO-POLICY-0101, R.0	April 2005	Revision 2	Refueling requirements for Area G and L
EP-AREAG-FO-DOP-0603, R.0	Approved for Training	Major Revision	Document has been revised from the previous policy for use in Area G and L. Incorporated are steps for refueling and recharging (Gas diesel, LP, electric Industrial Trucks and Equipment). This procedure supersedes SWO-POLICY-0101.
EP-AREAG-FO-DOP-0603, R.1	Approved for Training	Minor Revision	Language added to capture Set-Up of a Designated Refueling area in Area G. New Attachment for documenting set-up of designated refueling area. Minor editorial changes.
EP-AREAG-FO-DOP-0603, R.2	Approved for Training	Minor Revision	Update recharging area requirements, references, and editorial updates.
EP-AREAG-FO-DOP-0603, R.3	April 21, 2010	Major Revision	This revision contains revised refueling area requirements. Rev bar are omitted total rewrite. Hazards from preexisting IWD have been incorporated into this procedure through Precautions, limitations, Warnings, and Cautions.
EP-DIV-DOP-20085, R.0	February 12, 2013	Major Revision	This revision contains additional recharging area requirements. Added RANT and WCRRF requirements for electric forklifts. Procedure elevated to a Division level. Added additional attachment for establishing designated charging areas. Revised statement that operators are trained in accordance with LANL P101-4, Forklifts and Powered Industrial Trucks. Deleted Appendix 2 and renumbered remaining Appendices. Reformatted to new procedure template and new number. This procedure will supersede EP-AREAG-FO-DOP-0603.
EP-DIV-DOP-20085, R.1	May 14, 2013	Major Revision	Revise procedure to remove the instructions for Emergency Refueling in Area G. Make editorial corrections as necessary. This revision does not introduce any new hazards.

**REVISION HISTORY (continued)**

Document No./Revision No.	Issue Date	Action	Description
EP-DIV-DOP-20085, R.2	September 30, 2013	Major Revision	Revise procedure to incorporate requirements of ABD-WFM-002 Rev 2.0 Technical Safety Requirements (TSRs) for Technical Area 54, Area G. No new hazards are introduced by this revision. This revision is a Total Rewrite - Revision bars are not included.
EWMO-DOP-20085, R.0	August 10, 2016	Major Revision	Revised procedure in accordance with DOE/IG-0922 and EP-AP-10007. Added bullet for petroleum contaminated soil. Removed Section 6.1, Establishment of a Refueling Area and referenced EP-AREAG-FO-AP-1174. Updated Attachments.
EWMO-DOP-20085, R.1	November 21, 2016	Major Revision	Revised procedure to implement changes associated with ABD-WFM-006, R2.4 implementation.

**1. PURPOSE**

The procedure contains instructions and requirements for the proper and safe refueling of industrial trucks and equipment (e.g., earth movers, high and low-lift industrial trucks, All Terrain Vehicles, generators, aerial lifts, and small combustion engine equipment), removal and replacement of portable liquefied petroleum (LP) tanks on forklifts, and the recharging process for electric industrial trucks (high-lift and low-lift) in Environmental and Waste Management Operations (EWMO) facilities including 1) Radioassay and Non-destructive Testing (RANT) Facility, 2) Waste Characterization, Reduction, and Repackaging Facility (WCRRF), and 3) Technical Area (TA) 54 Areas G, L, J, and Administrative areas.

**2. SCOPE**

This procedure applies to personnel who supervise, schedule, and perform refueling, LP tank removal, replacement, and recharging evolutions.

This procedure applies to industrial trucks and equipment, regardless of size or application, designed with an internal combustion engine using diesel, gasoline, or LP. In addition, this procedure establishes the charging requirements for electrical industrial trucks (high-lift, low-lift) powered with industrial batteries. This procedure does not cover the requirements for recharging the electric trailer jockey in the RANT facility.

This procedure ensures that refueling and recharging of vehicles is performed in designated refueling and recharging locations in accordance with P101-4, Forklifts and Powered Industrial Trucks, and the following Technical Safety Requirements (TSRs):

- ABD-WFM-002, Technical Safety Requirements (TSRs) for Technical Area 54, Area G
- ABD-WFM-006, Technical Safety Requirements (TSRs) for Waste Characterization, Reduction, and Repackaging Facility (WCRRF)
- ABD-WFM-008, Technical Safety Requirements (TSRs) for the Radioassay and Nondestructive Testing (RANT) Site

**3. PRECAUTIONS AND LIMITATIONS**

**3.1 General Task Hazards and Controls**

- When a worker observes an unsafe condition or act that may pose an imminent danger or other safety concern/hazard, the worker has the authority and responsibility to inform the Person-In-Charge (PIC) and the worker engaged in the work and initiate a pause and/or stop work based on the risk posed to the individual, the employees, the environment, or the facility in accordance with P101-18, Procedure for Pause/Stop Work.
- General site hazards and their controls for the applicable facility are provided in EWMO-AP-20253, EWMO General Site Hazards and Controls. Personnel performing activities associated with this procedure shall meet facility access criteria, recognize the associated site hazards, and uphold the established controls.
- The PIC shall be notified if this procedure cannot be performed as written.
- Procedure steps marked with the (\$) symbol implement key requirements associated with the facility's safety basis. These steps may not be changed without engineering approval to ensure that the TSRs and other associated requirements are maintained.
- Refueling shall not be conducted during inclement weather (lightning or thunder storm).
- When freezing temperatures exist outdoors, precautions should be taken (proper personal protective equipment, gloves) to protect hands from being exposed to steel surfaces and/or when handling LP containers.
- Refueling personnel may respond to incipient stage fire associated with refueling activities if trained and competent in performing the task.
- All personnel operating power industrial trucks and equipment, as well as forklift operations, must be trained in accordance with P101-4, Forklifts and Powered Industrial Trucks, and EP-DIV-DOP-20086, EWMO Division Specific Forklift and Drum Handler Equipment Operations.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 8 of 34

---

Reference

**3.1 General Task Hazards and Controls (continued)**

- When refueling is conducted with liquid fuels (e.g., gas, diesel), minimize static conditions by ensuring vehicle is grounded and stay in contact with dispensing nozzles, especially when atmospheric conditions are dry and cool. Personnel must touch vehicle frame metal to eliminate potential static charge prior to handling and dispensing fuel from nozzle. If a tingling sensation is detected (e.g., the hair begins to stand on one's arms), then stop dispensing and leave the nozzle inside the vapor space for at least 30 seconds after the fuel flow stops.
- The process of grounding the refueling vehicle should be conducted by the Maintenance Personnel acting as the Refueling Personnel. Grounding of the refueling vehicle should be conducted in accordance with the applicable Standing Order.
- If during refueling operations a petroleum by-product (e.g., oil, gas, diesel, hydraulic-fluid, etc.) leaks or is spilled onto the soil, immediately notify both the Operation Center and the Deployed Environmental Professional. The contaminated soil must be cleaned up, containerized, and characterized in accordance with regulatory requirements for New Mexico Special Waste (<http://int.lanl.gov/env/rcra/docs/qa/tools/ENV-CP-504/pdf>).

**3.2 TA-54 Area G Specific Requirements**

- (\$) Periodic inspection/maintenance of vehicles/equipment shall be current.  
[Administrative Control (AC) 5.6.6(1)]
- The refueling vehicle (gas and diesel) is limited to a 500 gallon capacity of fuel in Zone 4 (see Appendix A, Depiction of Zones and Designated Refueling Location in Zone 4).  
[derived from Limiting Condition of Operation (LCO) 3.5.1]
- Establishment or modification of refueling locations is performed in accordance with EP-AREAG-FO-AP-1174, TA-54 Area G Establishing Defined Areas. Operational acceptance of the refueling location is performed in accordance with EP-AREAG-FO-DOP-1179, TA-54 Area G Operational Acceptance of Defined Areas and Refueling Locations.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 9 of 34

Reference

**3.2 TA-54 Area G Specific Requirements (continued)**

**NOTE** *LCO 3.5.1 is not applicable to refueling locations involving only propane cylinders. The LCO separation distance does not apply to the hose between the refueling vehicle and the vehicle/equipment undergoing refueling or to refueling vehicles located downhill from the RETRIEVAL AREAS.*

- **(S)** Minimum Refueling Separation Distances between vehicle/equipment refueling locations and DEFINED AREAS SHALL meet the following criteria: [LCO 3.5.1]

Capacity of Refueling Vehicle at Refueling Location	Minimum Refueling Separation Distance to DEFINED AREA with non-metal waste containers (ft)	Minimum Refueling Separation Distance to DEFINED AREA with only METAL CONTAINERS (ft)
> 7 gal. and ≤100 gal.	43	22
> 100 gal. and ≤ 500 gal.	71	45
> 500 gal. and ≤ 5,000 gal.	203	141

LOW ACTIVITY AREAS are excluded from above.

- **(S)** Vehicles/equipment in transit within Area G with greater than 100 gallons of flammable liquid SHALL be escorted and follow a designated route. [SAC 5.7.6]
- EP-AREAG-FO-AP-1190, Access Control for TA-54 Areas G, L, J, and H, provides the designated route for vehicles/equipment in transit within Area G with greater than 100 gallons of flammable liquid.
- **(S)** The refueling of TRANSPORTATION VEHICLES is prohibited when material at risk (MAR) is on the TRANSPORTATION VEHICLE. The control does not apply to propane-fueled forklifts. [SAC 5.7.2]
- No refueling shall be conducted inside domes, buildings, or structures.
- During refueling, the engine shall be stopped and the operator shall not occupy the industrial truck or equipment.
- Open flame or ignition source is prohibited at a minimum of 25 feet (ft) from any refueling locations.
- Personnel conducting refueling must have readily available an approved fire extinguisher that has passed current inspection.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 10 of 34

Reference

**3.3 TA-54 West RANT Specific Requirements**

- A refueling service truck visits the site on a routine schedule to supply diesel fuel. Service to vehicles requiring diesel fuel is performed away from facilities and container storage areas.
- No propane is used at or delivered to the RANT Facility.
- (\$) Refueling is prohibited within 30 ft of Building TA-54-38, CONTAINER STORAGE AREA, and MLU operations. This element of fire protection program applies only during OPERATION and WARM STANDBY MODE. [AC 5.6.5]

**NOTE**      *The following vehicles are described in SAC 5.7.3.B: "Exceptions: (1) Emergency vehicles in the case of any emergency; (2) Equipment with less than 5 gal. of fuel may be used for grounds maintenance and for snow and ice removal; (3) Vehicles or equipment to support non-emergency, off-normal conditions addressed in LCO 3.3."*

- (\$) Only electric powered forklifts are allowed at the RANT Site when transuranic waste is present outside of sealed Type B containers. An exception to this control is allowed for vehicles or equipment necessary to support non-emergency, off-normal conditions addressed in LCO 3.3 and for those vehicles described in SAC 5.7.3.B. [SAC 5.7.1.A]
- (\$) Propane, gasoline, or diesel fueled vehicles SHALL not be used inside Building TA-54-38 except when necessary to put the facility in COLD STANDBY. [LCO 3.3.3]

**3.4 WCRRF Specific Requirements**

- (\$) Propane, gasoline, or diesel-fueled vehicles shall not be used anywhere at the WCRRF when INVENTORY is present at the WCRRF. Exceptions: (1) Emergency vehicles in the case of any emergency and (2) Equipment with less than 5 gal. of fuel may be used for grounds maintenance and for snow and ice removal when INVENTORY is not present in the WCRRF yard (All INVENTORY is within BUILDING TA-50-0069). 3) Transportation vehicle for the delivery of RNS WASTE CONTAINERS and pickup of TRU WASTE CONTAINERS SHALL be allowed at the WCRRF. [SAC 5.10.1.1]
- Electric forklift recharging takes place outside the building.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 11 of 34

Reference

**3.4 WCRRF Specific Requirements (continued)**

- **(S) Control of Forklifts (any power source):**
  1. Forklifts are prohibited within the boundary of the Vehicle Access System while RNS WASTE CONTAINERS are present in the yard or airlock;
  2. Forklifts are prohibited in BUILDING TA-50-0069 while RNS WASTE CONTAINERS are in TA-50-0069. [SAC 5.10.5]

**3.5 Gasoline and Diesel-Powered Vehicles and Equipment (TA-54 Areas G, L, J, Admin only)**

- Fuel tanks shall not be overfilled to prevent spills or fuel expansion in the tank due to warmer temperature.
- Refueling locations shall be established to ensure a minimum of 20 ft from all other combustible materials.
- Cell phones shall be turned off and shall not be used during any refueling operations.

**3.6 LP Powered Vehicles and Equipment (TA-54 Areas G, L, J, Admin only)**

- LP tanks, that are removable U.S. Department of Transportation-type LP tanks, shall not be refilled by a bulk cylinder truck within the boundary of TA-54, Area G or L. However, exchange of the tanks may take place at designated LP Tanks Exchange and Storage Locations.

**NOTE** *Appendix B provides the TA-54 Area G map displaying LP Tanks Exchange and Storage Locations.*

- **(S) Compressed gas cylinders in storage, in TRANSPORT, or in use will be secured.**  
[AC 5.6.11(9)]
- **(S) Compressed gas cylinders will be stored in designated locations when not in use.**  
[AC 5.6.11(9)]
- **(S) Compressed gas cylinders in storage will be closed with the valve cap secured.**  
[AC 5.6.11(9)]

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Revision: 1  
Effective Date: 11/21/16  
Page: 12 of 34

Reference

**3.6 LP Powered Vehicles and Equipment (TA-54 Areas G, L, J, Admin only) (continued)**

- All full reserve and empty LP tanks shall be stored in UL-listed cabinets in one of the following locations:
  - one cabinet, at the TA-54 Area G gate, just north of Building 375
  - one cabinet, at TA-54 Area G Pad 10, a minimum of 20 ft from any building
  - two cabinets, each at TA-54 Area G, a minimum of 20 ft east of Building 8 and 20 ft setback from road
- LP Tank Exchange and Storage Locations shall be equipped with at least one approved portable fire extinguisher having a minimum capacity of 20 pounds (lbs) of dry chemical with A-B-C rating. The required fire extinguisher shall be located no more than 50 ft (15.25 m) from the storage location.
- LP tanks shall not be exchanged within any structure unless authorized by the Shift Operations Manager.
- LP tanks shall not be exchanged near sources of heat or open flame or similar sources of ignition or near open pits, underground entrances, shafts, or similar areas.
- Leak tests shall be conducted on LP service valves and LP connection coupler using a leak detection solution when exchanging LP tanks.
- LP forklift tanks weigh 54 lbs and; therefore, fall under the requirements of EP-DIV-POLICY-20057, Health and Safety Policy - Manual Movement. This procedure provides all the necessary steps, warnings, precautions, and approvals for proper and safe handling of LP cylinders and; therefore, no additional approvals and documentation are required for replacing the LP cylinders on forklifts in TA-54 Area G.

**3.7 Battery Powered Vehicles and Equipment**

- Only trained and authorized personnel shall replace industrial batteries.
- Operators shall contact the applicable Operations Center to obtain approval to relocate any forklift battery charging equipment.
- (\$) Electric-powered vehicles/equipment are charged in locations where hydrogen gas does not accumulate (e.g., domes, ventilated enclosures, outdoors). [ABD-WFM-002, AC 5.6.9(2)]

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Revision: 1  
Effective Date: 11/21/16  
Page: 13 of 34

Reference

**3.7 Battery Powered Vehicles and Equipment (continued)**

- Appendix C and D provide the locations of established forklift electric charging areas for RANT and WCRRF, respectively.
- Batteries shall not be removed within any facility or structure.
- Wherever on-board equipment chargers are used, charging shall be accomplished in locations taking into account the electrical requirements of the charger and designated locations.
- When charging batteries, the battery vent caps shall not be removed.
- Industrial trucks shall be properly parked, parking brake shall be applied, and key placed in the off position.
- If equipment is not equipped with a parking brake system, wheel chocks are required and shall be used.
- The battery compartment covers shall be opened to dissipate gas and heat.
- Open flame or spark is prohibited at battery charging locations.
- Metal objects (i.e., tools) shall be kept away from the battery terminals to prevent arcing or sparking.
- Metal objects such as personal watches and rings shall be kept away from uncovered batteries.
- "No Smoking" signs are required in locations where battery charging is being conducted.

**3.8 Hybrid (LP and Gasoline) Powered Industrial Trucks and Equipment  
(TA-54 Areas G, L, J, Admin only)**

- Hybrid powered industrial trucks are limited to LP in Area G.
- Equipment LP bottle change out will be performed at designated LP Tank Exchange and Storage Locations.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

**4. PREREQUISITE ACTIONS**

**NOTE**     *The listed prerequisite actions may be completed in any order.*

**4.1 Planning and Coordination**

**PIC**

- [1] ENSURE that the current revision of this document is available and IDENTIFY the document as a Working Copy on the Title Page.
- [2] ENSURE that the performance of this procedure is included in the facility Plan of the Day meeting.
- [3] ENSURE that a Radiological Work Permit for the planned activity has been issued.
- [4] ENSURE that a pre-evolution briefing is conducted for all personnel involved in the performance of this procedure in accordance with EWMO-AP-0112, EWMO Pre-Job Briefings.

**Operations Center**

- [5] NOTIFY personnel (e.g., public announcement system, e pagers, two-way radios, etc.) when and where refueling activity is being conducted.

**4.2 Materials and Equipment**

**Operator**

- [1] IF performing Section 5.2, Industrial Truck (Forklift) LP Tank Removal and Replacement (TA-54 Areas G, L, J, Admin Only),  
THEN ENSURE that a leak test solution is available, as required.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 15 of 34

Reference

**5. PERFORMANCE—INDUSTRIAL TRUCK AND EQUIPMENT REFUELING AND RECHARGING**

**5.1 Refueling (TA-54 Areas G, L, J, Admin only)**

This sub-section is stand-alone and may performed independently or in conjunction with other Performance sections.

**WARNING**

Operators are prohibited from having vehicles refueled while handling and/or transporting MAR to prevent the potential of a fire or explosion, which may cause an uncontrolled release of radiological materials to the personnel and to the environment.

**Operator**

- [1] DETERMINE whether vehicle requires fuel by observing fuel gauge.
- [2] OPERATE vehicle to designated refueling location.
- [3] IF waiting to receive fuel,  
THEN TURN-OFF vehicle until directed by refueling attendant to proceed to the immediate refueling location.

**WARNING**

Operators are prohibited from using cell phones and are required to shut-down cell phones during refueling. Failure to comply with this requirement could lead to serious personnel injury.

- [4] WHEN at the immediate fueling location,  
THEN PERFORM a complete shutdown of the vehicle.
- [5] EXIT the vehicle during the fueling process.

**Refueling Personnel**

- [6] CHECK-IN at the TA-54 Operations Center to receive locations approved for designated refueling for the vehicle/equipment type.
- [7] (\$) IF the refueling vehicle has an inventory of greater than 100 gallons of fuel,  
THEN OBTAIN an escort and follow a designated route per EP-AREAG-FO-AP-1190.  
[SAC 5.7.6]

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 16 of 34

Reference

**5.1 Refueling (TA-54 Areas G, L, J, Admin only) (continued)**

- [8] **DISCUSS** any additional requirements before performing any refueling activities with the TA-54 Operation Center.
- [9] **ENSURE** the following before refueling:
- (\$) Minimum Refueling Separation Distances per Table 5.1-1 below are met. [LCO 3.5.1]
  - (\$) With the exception of propane-fueled forklifts, TRANSPORTATION VEHICLES have **no** MAR in/on the vehicle. [SAC 5.7.2]
  - Fire extinguisher is readily available (on service truck or within 50 ft of designated refueling location).
  - Refueling location shall be posted "Refueling Location" during the refueling process.
  - Fuel spill tray is placed under the fueling connection point.
  - "No Smoking" signs are posted in designated refueling locations.

**NOTE 1** *Normal refueling activities involve a refueling truck with a capacity of 500 gallons.*

**NOTE 2** *LCO 3.5.1 is not applicable to refueling locations involving only propane cylinders. The LCO separation distance is not applicable to the hose between the refueling vehicle and the vehicle/equipment undergoing refueling or to refueling vehicles located downhill from the RETRIEVAL AREAS.*

(S) Table 5.1-1, Minimum Refueling Separation Distances [LCO 3.5.1]

Capacity of Refueling Vehicle at Refueling Location	Minimum Refueling Separation Distance to DEFINED AREA with non-metal waste containers (ft)	Minimum Refueling Separation Distance to DEFINED AREA with only METAL CONTAINERS (ft)
≥ 7 gal. and ≤ 100 gal.	43	22
≥ 100 gal. and ≤ 500 gal.	71	45
> 500 gal. and ≤ 5,000 gal.	203	141

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 17 of 34

Reference

**5.1 Refueling (TA-54 Areas G, L, J, Admin only) (continued)**

**NOTE** *The process of grounding the vehicle is performed according to the Maintenance Integrated Work Document, Maintenance Personnel Training, and the applicable Standing Order.*

[10] ENSURE that the refueling vehicle is grounded.

[11] NOTIFY all equipment operators to properly park, shut-down vehicle, and exit the vehicle during refueling.

[12] DETERMINE the type of fuel the vehicle requires.

**WARNING**

1. Fuel tanks shall not be overfilled to prevent spills or fuel expansion in the tank during warmer temperatures.
2. Personnel must touch the vehicle frame metal in order to eliminate potential static charge before handling and dispensing fuel from nozzle. Failure to comply with this practice could increase the potential for static conditions and ignition or explosion of fuel vapor.

[13] REFUEL the vehicle.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Reference

**5.2 Industrial Truck (Forklift) LP Tank Removal and Replacement (TA-54 Areas G, L, J,  
Admin only)**

This sub-section is stand-alone and may be performed independently or in conjunction with other Performance Sections.

**Operator**

- [1] IF the LP fuel gauge indicator displays less than 25%,  
THEN OPERATE the vehicle to a designated LP tank exchange and storage location  
(see Appendix B, TA-54 G Designated LP Tank Exchange and Storage Locations).
- [2] VERIFY that at least one approved portable fire extinguisher having a minimum  
capacity of 20 lbs of dry chemical with an A-B-C rating is present and operable no  
further than 50 ft (15.25 m) from the LP tank exchange and storage location.
- [3] LOWER the forks to the ground with the tines tilted forward.
- [4] TURN the ignition switch key to the OFF position.
- [5] EXIT the operator's cab and PERFORM one of the following:
  - Apply the vehicle parking or hand brake
  - Chock wheels to prevent inadvertent movement

**WARNING**

Personnel shall wear leather gloves while performing LP tank exchange to prevent injury to hands.

**CAUTION**

Do not over tighten the service valve once seated. Failure to comply with this requirement will impose excessive wear on the valve seal.

- [6] TURN the service valve on the LP tank clockwise to shutoff the LP supply (i.e., turn  
until valve is seated and will not turn anymore).
- [7] ENTER the equipment operator cab and **START** the vehicle to purge and depressurize  
LP fuel line.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085  
Revision: 1  
Effective Date: 11/21/16  
Page: 19 of 34

Reference

**5.2 Industrial Truck (Forklift) LP Tank Removal and Replacement (TA-54 Areas G, L, J,  
Admin only) (continued)**

- [8] TURN the ignition switch to the OFF position.
- [9] TURN the supply line coupler counter-clockwise by hand in order to loosen and remove the supply line from LP tank.
- [10] INSPECT the rubber O-ring seal inside the coupler end for cracks and damage.
- [11] IF the rubber seal is damaged,  
THEN CONTACT the PIC for guidance.

**NOTE** *Some trucks are equipped with a cradle swivel device that allows swinging the tank to the edge of fork truck for easy removal and replacement.*

- [12] REMOVE the LP fastening strap securing the LP tank.
- [13] IF equipped with a swivel cradle,  
THEN UNLATCH the gate latch and swing the cradle until the LP tank is parallel with forklift.
- [14] LIFT and REMOVE the empty LP tank and PLACE the LP tank into the designated LP tank exchange and storage location.

**WARNING**

1. Maintain proper lifting position when physically handling LP tanks to avoid a back injury.
2. Care shall be exercised when handling LP tanks to prevent tanks from being dropped, thrown, rolled, or dragged. Mishandling of LP tanks may cause serious personnel injury. Refer to EP-DIV-POLICY-20057, EWMO Health and Safety Policy for proper lifting procedure.
3. Full 30# LP cylinders weigh 54 lbs. Extreme caution must be exercised by the operator when removing full cylinders from LP supply cage and placing it on the forklift to prevent back injury. The use of proper PPE and safe lifting techniques shall be enforced, and if a worker feels they cannot safely handle the 30# LP cylinder alone, then the two-person rule should be used.

**EWMO Industrial Truck and  
Equipment Refueling and Recharging**

Document No.: EWMO-DOP-20085

Effective Date: 11/21/16  
Page: 20 of 34

Reference

**5.2 Industrial Truck (Forklift) LP Tank Removal and Replacement (TA-54 Areas G, L, J, Admin only) (continued)**

- [15] **REMOVE** a full LP tank from the LP storage and **VERIFY** the full status by viewing the site glass attached to top of tank (greater than 90% full).
- [16] **PERFORM** a visual inspection of the replacement LP tank (e.g., LP valve, labels/placards visible, gauge operable, condition of tank or valve guard).
- [17] **IF** the LP tank is damaged,  
**THEN:**
  - [A] **LABEL** the LP tank damaged (e.g., Caution tag).
  - [B] **CONTACT** Operation Center to log Caution Tag into the Caution Tag Logbook.
  - [C] **CONTACT** the PIC for direction.
- [18] **PLACE** the new LP tank in the LP cradle on the forklift.
- [19] **VERIFY** that the LP tank is positioned with the alignment pin as illustrated in Appendix E, Propane Tank Configuration.
- [20] **VERIFY** that the cradle gate latch is secured.
- [21] **IF** equipped with a swivel cradle,  
**THEN LIFT** the cradle pin and **ROTATE** the LP tank to the storage position.

**CAUTION**

**Do not over tighten the service valve once seated; hand tighten only. Failure to comply with this requirement will impose excessive wear on the valve seal.**

- [22] **CONNECT** the supply line coupler turning clockwise by hand until snug.
- [23] **ATTACH** the fastening strap to secure LP tank to equipment.
- [24] **TURN** the LP service valve counterclockwise approximately 1 and 1/2 turns to pressurize the LP line.

**5.2 Industrial Truck (Forklift) LP Tank Removal and Replacement (TA-54 Areas G, L, J,  
Admin only) (continued)**

- [25] IF a LP leak is noticeable (e.g., hissing, rotten egg odor/stink, visible mist),  
THEN IMMEDIATELY CLOSE the LP service valve and CONTACT the PIC for  
direction.
- [26] PERFORM a leak test using a leak detection solution at the LP coupler and service  
valve.
- [27] IF LP is observed leaking (e.g., soap bubbles are visible) at the coupler,  
THEN:
- [A] CLOSE the LP service valve.
- [B] NOTIFY the PIC for direction.
- [C] WHEN the problem is remediated,  
THEN GO to Step 5.2[22].

**5.3      Recharging Electric Industrial Trucks (Forklift)**

This sub-section is stand-alone and may be performed independently or in conjunction with other Performance sections.

**Operator**

- [1]    **OPERATE** the forklift to the designated recharging station.
- [2]    **(\$)** **ENSURE** the charging location is in an area where hydrogen gas does not accumulate (e.g., domes, ventilated enclosures, outdoors). [ABD-WFM-002, AC 5.6.9(2)]
- [3]    **PLACE** the forklift in the park position with the parking brake applied and the ignition switch turned OFF.
- [4]    **LOCATE** the battery connector end on the forklift.
- [5]    **REVIEW** the manufacturer's tag and charger placard to ensure that the charger and forklift have compatible voltages (48, 36, 24-volt systems).
- [6]    **SEPARATE** the battery connector from the forklift using the quick disconnect handle located on the connector end.
- [7]    **REMOVE** or **OPEN** the battery service cover during charging operations to allow the hydrogen gas to dissipate.

**NOTE**      *Chargers equipped with an auto charging function will activate the battery charger upon connection to battery.*

- [8]    **CONNECT** the battery portion of the forklift battery connector (connector end fastened to the battery) to the charger.
- [9]    **IF** battery charger is equipped with an automatic charging function,  
      **THEN:**
  - [A]    **VERIFY** that the charging light is illuminated on the battery charging panel.
  - [B]    **GO TO** Step 5.3 [11].
- [10]    **SET** the charger to daily, weekly, or weekend depending on need.

**5.3 Recharging Electric Industrial Trucks (Forklift) (continued)**

**NOTE** *The forklift chargers have a variety of power-on devices to energize the charger (e.g., switch, push button, and auto start).*

[11] **POWER-UP** the charger and **OBSERVE** the charging gauge to ensure that a proper connection is performed.

**NOTE 1** *Battery temperature will rise during charging process.*

**NOTE 2** *Some chargers are equipped with automatic charging functions and shutdown after the battery charging is complete.*

[12] **WHEN** the charging is complete,  
**THEN DISCONNECT** battery from charging connector and ensure the charger is off.

[13] **REPLACE** or **CLOSE** the battery cover.

[14] **RECONNECT** the battery to the forklift.

**6. PERFORMANCE—ESTABLISHING DESIGNATED RECHARGING LOCATIONS**

This section is a stand-alone and may be performed independently or in conjunction with other Performance sections.

**PIC**

- [1] **RECORD** the date and location of the proposed designated recharging location in Attachment 1, Criteria for Establishing a Designated Recharging Location.
- [2] **COORDINATE** with Fire Protection Engineer (FPE) and Maintenance Supervisor to evaluate proposed location, ensuring the following requirements are met, and **CHECK** (✓) YES or NO on Attachment 1.
  - Fire protection is adequate at the recharging location.
  - (\$) At Area G, electric-powered vehicles/equipment are charged in locations where hydrogen gas does accumulate (e.g., domes, ventilated enclosures, outdoors). [AC 5.6.9(2)]
- [3] **DOCUMENT** additional requirements or restrictions in accordance with the FPE and Maintenance Supervisor in Comments section on Attachment 1.
- [4] **IF** any of the criterion in Step 6.[2] is checked (✓) NO.  
**THEN:**
  - [A] **DOCUMENT** the deficiency in the Comments section on Attachment 1.
  - [B] **CONTACT** the TA-54 Operations Center, FPE, and the Industrial Hygiene and Safety Representative (IH&S) for guidance.
  - [C] **GO TO** Step 6.[1] and **REPEAT** this section after deficiency has been resolved.

**7.1 Activity Closeout (continued)**

**PIC**

- [11] IF abnormal conditions were identified during the performance of this procedure, THEN INITIATE actions to correct the deficiency/discrepancy, such as generating a Nonconformance Report or Performance Feedback and Improvement Tracking, and DOCUMENT actions taken in the Comments Section of the applicable attachment.

**NOTE** *Completing a Post-Job Review may be accomplished using the applicable P300 form or online (the preferred method since the institution has access to feedback and lessons learned <http://int.lanl.gov/safety/iwmc/> [Click on the Submit IWD Part 4 Post-Job Review]).*

- [12] IF any of the following occur:
- A new activity was completed for the first time
  - A request was made by anyone involved with the performance of this procedure to perform a post-job review
  - An abnormal event occurred
  - A revision to an existing procedure was issued and it has been determined by the procedure owner or designee that a Post-Job Review is required
- THEN PERFORM a Post-Job Review in accordance with P300, Integrated Work Management.

**7.2 Records Processing**

Records generated while performing this procedure must be processed and maintained in accordance with EP-AP-10003, Records Management.

### REVISION HISTORY

A comprehensive log of changes made to this procedure, including superseded documents and complete revision descriptions, is accessible through the Electronic Document Management System (EDMS). The following log is abridged to one page and includes only the latest revisions.

Document No./Revision No.	Issue Date	Action	Description
EP-DIV-DOP-20086, R.1	December 14, 2012	Major Revision	Revise procedure to incorporate requirement changes associated with the Area G TSR Page Change 0.33 and correct existing TSR references. Make editorial corrections as necessary. This revision does not introduce any new hazards.
EP-DIV-DOP-20086, R.1 IPC-1	January 22, 2013	IPC	Revised to correct history on Revision 0 EP-DIV-DOP-20086 to Cancel EP-DIV-SO-20063 instead of EP-DIV-SO 20038.
EP-DIV-DOP-20086, R.2	March 15, 2013	Major	Revised procedure to add additional controls for TA-54 Area G when moving and handling palletized drums. Changed word from mast to backrest carriage. Changed word from Center of Gravity to Load Center on Attachment 5. Revision Bars in left column display location of changes. No additional hazards were identified during this revision.
EP-DIV-DOP-20086, R.3	September 30, 2013	Major Revision	Revise procedure to incorporate requirements of ABD-WFM-002 Rev 2.0 Technical Safety Requirements (TSRs) for Technical Area 54, Area G. No new hazards are introduced by this revision.
EP-DIV-DOP-20086, R.4	January 29, 2014	Major Revision	Revised procedure to update requirements for critical lifts per P101-25. Revision bars in left column display location of changes. No additional hazards were identified during this revision.
EP-DIV-DOP-20086, R.5	March 21, 2014	Major Revision	Revise procedure to require securing SWBs per AC 5.6.11(8). No additional hazards were identified during this revision.
EP-DIV-DOP-20086, R.5 IPC-1	April 15, 2014	IPC	Revise procedure to allow for SWBs to be loaded and unloaded from a transport vehicle without strapping in TA-54 Area G. This revision does not introduce any new hazards.
EWMO-DOP-20086, R.0	November 18, 2016	Major Revision	Revised to include TA-54 Area G Dome 375 and WCRRF RNS waste forklift controls. Revised to current procedure organization and template.

		Effective Date: 11/18/16
		Page: 4 of 33

1. PURPOSE

This procedure provides the requirements and instructions for the proper and safe operations and inspections of forklifts and drum handlers at Environmental and Waste Management Operations (EWMO) facilities: 1) Radioassay and Nondestructive Testing Facility (RANT), 2) Waste Characterization, Reduction and Repackaging Facility (WCRRF), and 3) Technical Area (TA)-54.

2. SCOPE

This procedure applies to personnel who supervise, operate, spot, and inspect forklifts and drum handlers. The procedure also identifies the operational requirements identified in EWMO area specific safety basis documents for the facilities listed above. Forklift and drum handler operations are a critical support activity and must be conducted in a safe manner to ensure the safe handling, placement, and movement of radioactive waste containers, materials, and equipment. This procedure applies to all types and sizes of powered industrial low lifts and high lifts industrial equipment used for the purpose of lifting and handling waste containers, materials, and equipment. This procedure works in conjunction with P101-4, Forklift and Powered Industrial Trucks and EWMO-DOP-20085, EWMO Industrial Truck and Equipment Refueling and Recharging. This procedure does not contain the instructions for conducting hoist and crane operations or for using the forklift as a hoist.

		Revision: 0
		Effective Date: 11/18/16
		Page: 5 of 33

### 3. PRECAUTIONS AND LIMITATIONS

- General site hazards and their controls for EWMO-supported facilities are provided in EWMO-AP-20253, EWMO General Site Hazards and Controls. Personnel performing activities associated with this procedure shall meet facility access criteria, recognize the associated site hazards, and uphold the established controls.
- The instructions in this procedure satisfy the P101-25 ordinary lift requirements and the use of LANL Form 1611, Ordinary Lift Procedure, is not required. Not all of the items listed on Form 1611 are captured in this procedure because this procedure is performed using gantry cranes and forklifts in preapproved locations and lifts standard waste containers of a known size and volume.
- Forklift operations are governed by the LANL procedure P101-4, Forklift and Powered Industrial Trucks. P101-4 requires the completion of the applicable sections of a LANL procedure P101-25 Attachment B for critical lifts involving a forklift or powered industrial truck. Forklift operations not involving a critical lift (e.g., load suspended below the forks of the forklift) are not required to comply with the ordinary lift requirements of P101-25.
- This procedure contains special procedure step markings. (\$) is used to identify steps that implement EWMO safety basis requirements. Steps containing (\$) may not be changed without Engineering approval to ensure the safety envelope is maintained.
- Not Applicable (N/A) is documented on the attachments during the performance of this procedure indicating information that is not required to be recorded.
- Forklift/drum handlers are not used as an employee man-lift, unless approved by the manufacturer and designed for that purpose.
- High temperature and humidity; use of respirators and impermeable or multilayered work clothing with limited air movement; physical exertion; poor physical condition; certain medicines; and inadequate tolerance for hot workplaces may result in heat stress. In order to reduce the potential of heat stress the following activities should be practiced:
  - Allow sufficient time for proper acclimatization to heat
  - Increase fluid and electrolyte intake before and during work
  - Use an approved work/rest regimen per IHS personnel instructions
  - Recognize the early symptoms of heat stress
  - Consider heat stress when selecting personal protective equipment

---

**3. PRECAUTIONS AND LIMITATIONS (continued)**

- When entering or exiting forklift operator cab, maintain at least three points of contact.
- Forklift operators shall be trained and qualified to operate forklifts in accordance with P101-4.
- Review radiation level postings and maps prior to crossing radiological boundaries. Limit forklift and drum handler operations inside Radiation Areas. Ensure Radiological boundary (e.g., rope, signage) is replaced after crossing the boundary. Do not drive over radiological postings.
- No person shall be allowed to stand or pass under the elevated portion (forks) of any truck, whether loaded or empty.
- Only a person that is properly seated in a seat provided by the forklift manufacturer may ride on a fork lift.
- All persons are be prohibited from placing arms or legs between the uprights of the mast or outside the confines of the operator cab while operating a forklift.
- Extreme care shall be used when tilting the load forward or backward, particularly when high tiering/stacking. Tilting forward while engaging an elevated load shall be prohibited except to pick up a load. An elevated load shall not be tilted forward except when the load is in a deposit position over a rack or stack. When stacking or tiering, only enough backward tilt to stabilize the load shall be used to prevent a loss of load.

#### 4. PREREQUISITE ACTIONS

**NOTE** *A separate pre-job briefing is not required for this procedure when being performed in conjunction with other procedures that contain the requirements of an Integrated Work Document in accordance with P300, Integrated Work Management.*

##### Supervisor/Shift Operations Supervisor (SOS)

- [1] ENSURE that a pre-job briefing is performed for all personnel involved in the performance of this procedure, per EWMO-AP-0112, EWMO Pre-Job Briefings.
- [2] ENSURE that the procedure is the latest revision and DOCUMENT on the Title Page.
- [3] ENSURE that a Radiological Work Permit (RWP) has been obtained and that workers are briefed on the RWP in accordance with P121, Radiation Protection, as applicable.
- [4] ENSURE that the forklift and drum handler operators and spotters are trained to the requirements of this procedure.
- [5] IF activities involving any of the following are to be performed in a DEFINED AREA in Area G,
  - Low Level Waste (LLW)
  - Mixed LLW
  - Hazardous Waste
  - TRITIUM WASTE
  - TRITIUM-CONTAMINATED WASTE
  - TRU WASTETHEN VERIFY the following with the TA-54 Operations Center:
  - DEFINED AREA(s) involved in the work activity are in OPERATION MODE.
  - Area G is in Staffing Condition 1 (one), as defined in EWMO-AP-20059, EWMO Watchbill Administration.

## 5. PERFORMANCE

### 5.1 Forklift Inspection

**NOTE** *Forklifts that are used continuously (shift to shift) shall be inspected per 1910.178(q)(7) between shifts.*

#### **Forklift Operator**

- [1] **RECORD** the following forklift information on Attachment 1:
  - Forklift name
  - Equipment number
  - Technical Area
  - Building/area
  - Hour-meter reading (if applicable)
  - Next PM Due Date (annual inspection)
- [2] **CHECK** (✓) the type of forklift being inspected (Gas, Diesel, LP, or Electric) on Attachment 1.
- [3] **(S) PERFORM** a daily inspection in accordance with Attachment 1.  
[ABD-WFM-002, AC 5.6.6(1)]
- [4] **CHECK** (✓) SAT or UNSAT to indicate whether the equipment satisfies the inspection criteria listed on Attachment 1.
- [5] **IF** UNSAT was checked (✓) in the previous step,  
**THEN:**
  - [A] **DOCUMENT** discrepancies in the Comments section of Attachment 1.
  - [B] **NOTIFY** the specific area Operations Center Operator.
  - [C] **REQUEST** guidance and direction from the SOS.

**NOTE** *In TA-54 Area G, the Operations Center will tag-out the forklift and initiate a Facility Service Request (FSR).*

- [D] **COMPLETE** Attachment 3, Defective Equipment Report for Forklifts and Industrial Equipment.
- [E] **SUBMIT** an FSR for maintenance along with a copy of Attachment 1.

**5.1      Forklift Inspection (continued)**

- [6]      **DOCUMENT** the following information on Attachment 1:
- Shift (Days, PMs, or Mids)
  - Forklift operator's name (print and signature)
  - Forklift operator's Z number
  - Inspection date

Reference	EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
		Revision: 0
		Effective Date: 11/18/16
		Page: 10 of 33

## 5.2 Drum Handler Inspection

**NOTE** *Drum handlers should be inspected before every shift. .*

### Forklift Operator

- [1] **RECORD** the following drum handler information on Attachment 2:
  - Drum handler name/model number
  - Equipment number
  - Technical Area and building/area
  - Hour-meter reading (if applicable)
  - Next PM Due Date (annual inspection)
- [2] **(S) PERFORM** a daily inspection in accordance with Attachment 2. [ABD-WFM-002, AC 5.6.6(1)]
- [3] **CHECK** (✓) SAT or UNSAT to indicate whether the equipment satisfies the inspection criteria listed on Attachment 2.
- [4] **IF** UNSAT was checked (✓) in the previous step,  
**THEN:**
  - [A] **DOCUMENT** the discrepancies in the Comments section of Attachment 2.
  - [B] **NOTIFY** the area SOS and the specific area Operations Center.
  - [C] **REQUEST** guidance and direction from the SOS.
- NOTE** *In TA-54 Area G, the Operations Center will tag-out the drum handler and initiate a FSR.*
  - [D] **COMPLETE** Attachment 3.
  - [E] **SUBMIT** an FSR for maintenance along with a copy of Attachment 2.
- [5] **DOCUMENT** the following information on Attachment 2:
  - Shift (Days, PMs, or Mids)
  - Drum Handler operator name (print and signature)
  - Drum Handler Operator's Z. number
  - Inspection date

Reference	EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
		Revision: 0
		Effective Date: 11/18/16
		Page: 11 of 33

### 5.3 General Forklift Safe Operating Practices

NOTE *Steps 5.3[1] through 5.3[14] may be performed out of sequence or concurrent with other steps in this section.*

#### Forklift Operator

- [1] REVIEW the manufacturer's tag to determine the maximum lifting capacity of the forklift with and without attachments.

#### CAUTION

Forklifts and powered industrial trucks **SHALL not** be altered or modified in a manner that affects their capacity or safe operation without written approval from the manufacturer.

- [2] IF the forklift is equipped with attachments other than factory-installed attachments, THEN ENSURE the following information is available for the operator:
- Identification of the approved attachments
  - Weight of the forklift
  - The maximum lifting capacity of the forklift with the additional attachment and attachment combination at a maximum elevation with load laterally centered
- [3] REVIEW surroundings for surface conditions, overhead clearance, and other activities to determine whether forklift operations can be conducted safely.
- [4] PLAN the travel path before performing forklift operations.
- [5] ADJUST the forklift tires to the maximum width while engaging the load for maximum stability of the load.
- [6] ENSURE that the load is centered; the heaviest point is generally between the forks and closest to the backrest.
- [7] ENSURE the forks are adjusted (height and tilt) prior to engaging a pallet/load for pickup.

EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
Reference	Revision: 0
	Effective Date: 11/18/16
	Page: 12 of 33

### 5.3 General Forklift Safe Operating Practices (continued)

**NOTE 1** *When calculating the maximum lifting capacity of the truck if the load center is increased, Table 5.3-1, Forklift Maximum Lifting Capacity at Various Load Centers, provides an example for reduction of maximum lifting capacity for a specified load center.*

**NOTE 2** *Appendix 2, Maximum Lifting Capacity and Load Center Calculator Aid and Instructions, provides a generic table for determining your specific forklift reduced lifting capacity based upon manufactures maximum lifting capacity tag information.*

TABLE 5.3-1, FORKLIFT MAXIMUM  
LIFTING CAPACITY AT VARIOUS LOAD CENTERS (EXAMPLE)

<i>Maximum Lifting Capacity on Manufacturer Tag</i>	
<b>5,000 pounds (lbs.)</b> <b>(Example only manufacturer's tag information)</b>	<b>24 inches (in.) x 5,000 lbs. = 120,000 in.-lb.</b>
	<i>Reduced Lifting Capacity</i>
@ 30 in.	$120,000 \text{ in.-lb.} \div 30 \text{ in.} = \mathbf{4,000 \text{ lbs.}}$
@ 36 in.	$120,000 \text{ in.-lb.} \div 36 \text{ in.} = \mathbf{3,333 \text{ lbs.}}$
@ 48 in.	$120,000 \text{ in.-lb.} \div 48 \text{ in.} = \mathbf{2,500 \text{ lbs.}}$
@ 60 in.	$120,000 \text{ in.-lb.} \div 60 \text{ in.} = \mathbf{2,000 \text{ lbs.}}$

- [8] **DETERMINE** whether the load is within the safe lifting capacity of the forklift using Appendix 2 as necessary.
- [9] **IF** the reduced lifting capacity for a specific load **CANNOT** be determined, **THEN NOTIFY** SOS and Industrial Safety for guidance and assistance.
- [10] **SLOWLY ENGAGE** the load and **ENSURE** that the load is positioned so that the load is resting against the backrest/carriage.
- [11] **IF** the load is awkward and has the potential of falling off the forks, **THEN SECURE** the load to the forklift using approved fastening device (e.g., rope, chain, tie-down fastening strap).
- [12] **LIFT** the load approximately 3 to 5 inches off the surface, slightly tilted back to obtain a safe travel position.
- [13] **IF** view is obstructed, **THEN UTILIZE** a spotter and/or **OPERATE** the forklift in reverse with load trailing.

Reference	EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
		Revision: 0
		Effective Date: 11/18/16
		Page: 13 of 33

---

**5.3      General Forklift Safe Operating Practices (continued)**

- [14] UTILIZE a spotter when performing stacking, high lifts, racking, or load placement on truck flatbed/box van.

NOTE      *Forklifts are considered unattended and shall be shut-down when the operator is more than 25 ft. from the equipment or the forklift is out the operator's view.*

- [15] WHEN the forklift operations are complete, or when the forklift is to be left unattended, THEN PERFORM a proper shutdown to include the following:

- [A] OPERATE the forklift to an appropriate and/or designated parking area.
- [B] PLACE the forks in park or down position (on the ground and tilted slightly forward).
- [C] TURN the forklift off and remove the keys.
- [D] APPLY the parking brake and/or chock the wheels if forklift is on an incline.
- [E] LOCK or SECURE the forklift as applicable.
- [F] IF operating a LP type forklift,  
THEN ENSURE that the service valve on the LP Tank is CLOSED (turning valve clockwise until seated).
- [G] PERFORM a visual inspection for leaks or abnormalities.
- [H] IF a visual inspection reveals signs of a leak or abnormalities,  
THEN NOTIFY supervision for guidance.

#### 5.4 General Drum Handler Operating Practices

This section applies to several models of drum handlers (e.g., Rotogrip, Easy Lift) designed for lifting, repositioning, and/or transporting drum type containers.

##### Forklift/Drum Handler Operator

- [1] REVIEW the manufacturer's tag to determine the maximum lifting capacity of the drum handler.
- [2] REVIEW surroundings for surface conditions, overhead clearance, and other activities to determine whether drum handler operations can be conducted safely.
- [3] PLAN the travel path before performing drum handler operations.
- [4] ALIGN the drum handler to ensure the parrot beak/drum jaws are aligned with the center of the drum when negotiating the initial approach.
- [5] ATTACH OR FASTEN the parrot beak / drum jaws to the waste container.
- [6] PICK UP load slightly (2 to 4 inches) to ensure drum is properly fastened to the drum handler.
- [7] IF drum appears unstable or not properly attached,  
THEN:
  - [A] LOWER drum and REPOSITION parrot beak/drum jaws.
  - [B] GO TO Step 5.4[6].
- [8] LIFT the load approximately 3 to 5 inches travel height off the surface.
- [9] IF view is obstructed,  
THEN UTILIZE a spotter and/or OPERATE the drum handler in opposite direction (drum handler control arm side leading).

---

**5.4     General Drum Handling Operating Practices (continued)**

**NOTE**     *Drum handlers are considered unattended and shall be shut-down when the operator is more than 25 ft. from the equipment or the drum handler is out the operator's view.*

[10]   **WHEN** drum handler operations are complete,  
      **THEN PERFORM** a proper shutdown to include the following;

[A]   **OPERATE** the drum handler to an appropriate and/or designated parking area.

[B]   **PLACE** the drum handler to the lowest point (down).

[C]   **TURN** the drum handler off and remove the keys.

[D]   **LOCK** or **SECURE** the drum handler as applicable.

		Revision: 0
		Effective Date: 11/18/16
		Page: 16 of 33

## 5.5 Forklift Critical Lift

This section is performed in conjunction with other performance sections of this procedure. This section applies to forklift critical lifts that are non-routine. Routine forklift critical lifts are captured in area specific procedures.

### PIC

- [1] DETERMINE whether a forklift critical lift is required based upon the following criteria and those identified for critical lifts in the Area Specific Forklift Operations Requirements, Sections 5.6, 5.7, and 5.8:
  - If the load item is damaged or upset, it would result in a release into the environment of radioactive or hazardous material exceeding the established permissible environmental limits.
  - The load item is unique and, if damaged, would be irreplaceable or not repairable, and it is vital to a system, facility or project operation.
  - If the load item is damaged, the cost to replace or repair it or the delay in operations resulting from the damage would have a negative impact on facility, organizational, or DOE budgets to the extent that it would affect program commitments.
  - If the load were mishandled or dropped, the event would cause any of the above noted consequences to nearby installations or facilities.
  - The lift exceeds 75% of the manufacturer's rated capacity for the industrial truck or mechanized equipment to be used in the lift.
  - The load item requires special care in handling because of weight, size, asymmetrical shape, undetermined center of gravity, installation tolerances, or other unusual factors.
  - The lift is an otherwise non-critical lift that must be made in close proximity to critical or expensive items that could be damaged.
  - The lift uses two or more lift trucks or a combination of such equipment.
  - The lift truck or mechanized equipment could at any time come in contact with an energized high voltage power line.
  - The lift requires personnel to be lifted.
- [2] IF one or more of the criteria listed in Step 5.5[1] is applicable,  
THEN OBTAIN and COMPLETE an Attachment B, LANL Critical Lift Plan from P-101-25, Cranes, Hoists, Lifting Devices, and Rigging Equipment, prior to performing forklift critical lift.

<p>EWMO Division Specific Forklift And Drum Handler Equipment Operations Reference</p>	<p>Document No.: EWMO-DOP-20086 Revision: 0 Effective Date: 11/18/16 Page: 17 of 33</p>

## 5.6 TA-54 Area G Specific Forklift Operations Requirements

The following are forklift requirements and restrictions identified for TA-54 Area G. Minimum requirements for movement of palletized waste containers are provided in Table 5.6-1, below:

TABLE 5.6-1, WASTE CONTAINER FASTENING  
REQUIREMENTS FOR PAVED and UNPAVED SURFACES

Paved Surfaces					
4 Drums	3 Drums	2 Drums	1 Drum	Standard Waste Boxes (SWBs)	Other Containers (Fiber Reinforced Plywood (FRPs), Other Metal Containers)
<p>* 2 metal bands around drums</p> <p><b>OR</b></p> <p>1 nylon ratcheting strap around drums</p> <p><b>OR</b></p> <p>1 nylon ratcheting strap secured to backrest/carriage***</p>	<p>Tight triangle array (two of three against backrest/carriage)</p> <p><b>AND</b></p> <p>2 metal bands*</p> <p><b>OR</b></p> <p>1 nylon ratcheting strap around drums</p> <p><b>OR</b></p> <p>Tight triangle array (two against backrest/carriage)</p> <p><b>AND</b></p> <p>1 nylon ratcheting strap secured to backrest/carriage</p>	<p>Drums against backrest/carriage</p> <p><b>AND</b></p> <p>1 nylon ratcheting strap secured to backrest/carriage</p>	<p>Drum centered against backrest/carriage</p> <p><b>AND</b></p> <p>1 nylon ratcheting strap secured to backrest/carriage</p>	<p>Must be on a pallet</p> <p><b>AND</b></p> <p>1 nylon ratcheting strap secured to backrest/carriage***</p> <p><b>OR</b></p> <p>Handled using an approved rigging device (SWB lift fixture)</p>	<p>** 1 nylon ratcheting strap around container to be secured to the backrest/carriage (as applicable)</p>
<p>* Metal banding that currently exists on drum packs will continue to perform their safety function until the drum packs are disassembled.</p> <p>** FRPs and Metal containers vary in size (e.g., 10 L X 4 W, and 6 H) and may require special care in moving the container from point A to B. Strapping requirements may or may not apply in every application at the discretion of the Shift Operations Supervisor and Industrial Hygiene/Safety.</p> <p>*** Moving, or relocating of TRU WASTE drums or SWBs outside domes/buildings that are palletized with a forklift shall require securing the drums or SWBs to the backrest/carriage using an approved fastening device (e.g., strap, chain). This requirement does not apply to loading or unloading of TRU WASTE drums or SWBs on and off transport vehicles (e.g., flatbed, stake bed).</p>					
Unpaved Surfaces					
<p>Any time a forklift is used as the primary transport vehicle for transporting or moving palletized waste containers in Area G on unpaved surfaces, the load <b>SHALL</b> be secured to the carriage/backrest of the forklift using approved fastening device (e.g., strap, chain).</p>

**5.6      TA-54 Area G Specific Forklift Operations Requirements (continued)**

The following additional forklift requirements and restrictions are identified in the TA-54 Area G safety basis documents ABD-WFM-002, Technical Safety Requirements (TSRs) for Technical Area 54, Area G and ABD-WFM-002, Attachment 1, Technical Safety Requirements (TSRs) for TA-54 Area G, RNS Waste Activities.

- (\$) The posted speed limit for TA-54, Area G is less than or equal to 15 miles per hour (mph). [AC 5.6.9(1)]
- (\$) A spotter shall be present for TRU WASTE container lifts greater than 4 ft. above the ground surface directly below the TRU WASTE container. [SAC 5.7.8(1)]
- (\$) A critical lift plan **SHALL** be used for planned lifts of the TRU WASTE container greater than 12 ft. above the ground surface directly below the TRU WASTE container. [5.7.8(2)]
- (\$) A critical lift plan **SHALL** be used for planned lifts of FRPs with MAR greater than 150 PE-Ci. [5.7.8(3)]
- (\$) Personnel maintain applicable LANL qualifications for vehicle and equipment operation. [AC 5.9(1)]
- (\$) Personnel are trained to recognize specific job hazards and associated controls. [AC 5.9(2)]
- (\$) TRU WASTE containers on stacked pallets in the storage array **SHALL** be secured (e.g., banded). [AC 5.6.11(6)]
- (\$) TRU WASTE containers **SHALL** be secured during transport by motorized vehicle (e.g., forklift or truck). [AC 5.6.11(8)]
- (\$) Compressed gas cylinders in storage, in transport, or in use **SHALL** be secured. [AC 5.6.11(9)]

EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
Reference	Revision: 0
	Effective Date: 11/18/16
	Page: 19 of 33

**5.6 TA-54 Area G Specific Forklift Operations Requirements (continued)**

- NOTE 1** *TRU WASTE drums removed from Pit 9 or Trenches A-D are treated as UNVENTED TRU WASTE DRUMs until demonstrated to be vented or OVERPACKED.*
- NOTE 2** *LCO 3.4.2 is not applicable during retrieval of below-ground waste or during MINOR MOVEMENTS.*
- NOTE 3** *MINOR MOVEMENT is defined as: During HANDLING of UNVENTED TRU WASTE DRUMs, the movement of a drum to the extent necessary for attachment or removal of lid restraints and/or lifting devices; or the insertion or removal of a drum from an OVERPACK, DOUBLEPACK, or other blast-mitigation device.*
- **(\$)** After an UNVENTED TRU WASTE DRUM is removed from its underground storage configuration at a RETRIEVAL AREA, the UNVENTED TRU WASTE DRUM **SHALL NOT** be stacked, and **SHALL** be inserted into an OVERPACK/ DOUBLEPACK IMMEDIATELY, or placed in an ISOLATION AREA until inserted into an OVERPACK/ DOUBLEPACK, or until a lid restraint is applied for its transfer to an ISOLATION AREA within the above-ground STORAGE AREA, or the drum is VENTED. [SAC 5.7.7]
  - **(\$)** During HANDLING (other than MINOR MOVEMENT) of UNVENTED TRU WASTE DRUMS, a lid restraining device **SHALL** be installed. UNVENTED TRU WASTE DRUMS being TRANSPORTED **SHALL** have a lid restraining device installed, AND one of the following: [LCO 3.4.2]
    - Have a shielding/engineered barrier between the UNVENTED TRU WASTE DRUM and the worker
    - Maintain safe standoff distance  $\geq 30$  ft. between the UNVENTED TRU WASTE DRUM and the worker
  - Use of spotters is required during forklift operations involving an UNVENTED DRUM.

		Revision: 0
		Effective Date: 11/18/16
		Page: 20 of 33

---

**5.6      TA-54 Area G Specific Forklift Operations Requirements (continued)**

- Before engaging loads, the forklift operator shall review the load for overweight TRU WASTE drums. Overweight TRU WASTE drums are defined as TRU WASTE drums weighing greater than 800 pounds. Overweight TRU WASTE drums have been identified and labeled (> 800 pounds). When forklift operators engage pallets with TRU WASTE drums greater than 800 pounds, they must ensure that the TRU WASTE drums are positioned closest to the forklift backrest. If a pallet is being negotiated for pickup and the overweight TRU WASTE drums are furthest away from forks, then the operator will need to reposition pallet to ensure the overweight TRU WASTE drums are closest to the load backrest. If the pallet contains four overweight TRU WASTE drums, the operator must ensure that the pallet is up against the backrest and the forklift lifting capacity is capable of lifting the load.
- Overweight TRU WASTE drums shall not be stacked or tiered.
- When, lifting, handling, moving, transferring, and stacking TRU WASTE containers, forklift operations shall be restricted to handling only one pallet at a time.
- When lifting, handling, moving, transferring oversize containers (i.e., FRPs, metal containers), the operator shall ensure the load is centered over the forks.
- All Remote-Handled waste canister lifts in Area G shall be performed according to critical lift requirements specified in P101-25, Cranes, Hoists, Lifting Devices, and Rigging Equipment, or successor document.
- Without prior approval from Industrial Hygiene and Safety (IHS), no more than two propane-fueled forklifts are to be operated at one time inside a tension support dome and all tension support dome doors must be open to prevent an unacceptable carbon monoxide concentration inside tension support domes.
- No more than two propane-fueled combustion engine vehicles (e.g., forklift or man lift) may be operated in an unventilated TA-54 dome or building without TA-54 Shift Operations Manager approval.

Reference	EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
		Revision: 0
		Effective Date: 11/18/16
		Page: 21 of 33

**5.6 TA-54 Area G Specific Forklift Operations Requirements (continued)**

- When propane-fueled combustion engine vehicles (e.g., forklift or man lift) operations occur in an unventilated TA-54 dome or building, the dome or building doors must be opened as follows. These requirements may be modified by IH&S:
  - One forklift - open the exterior equipment access doors (e.g., clamshell doors) before starting work.
  - Two forklifts - open all exterior equipment doors (e.g., the exterior equipment doors and exterior side-hinged doors) before operating industrial equipment to maximize passive dome or building ventilation.
- When TA-54 dome doors are to be closed due to high winds, forklift operations shall not occur without TA-54 Shift Operations Manager approval.
- (\$) No gasoline-fueled or diesel-fueled combustion engine vehicles (e.g., forklift) may be operated in a dome or building without TA-54 Shift Operations Manager approval. Prior to introducing gasoline-fueled or diesel-fueled combustion engine vehicles into a DEFINED AREA and the associated thermal separation distance, the requirements of LCO 3.3.1 **SHALL** be met and maintained. [LCO 3.3.1]
- (\$) Operators **SHALL** observe posted speed limit of less than or equal to 15 mph in Area G. [AC 5.6.9(1)]
- (\$) Periodic inspection and maintenance of LANL vehicles/equipment, as part of the maintenance program, **SHALL** be performed. [AC 5.6.6(1)]
- (\$) The following forklift restrictions are applicable to the storage or handling of remediated nitrate salt (RNS) waste containers. This control applies to fossil-fueled and electric-powered forklifts:
  1. Forklifts are prohibited inside the 54-0375 Perma-Con or on the Perma-Con loading dock when RNS waste is present.
  2. Forklifts **SHALL NOT** be used for the movement or handling of RNS waste containers. [Area G TSR, Attachment 1, SAC 5.7.20]
- (\$) A spotter shall be present when RNS waste containers are being moved. [Area G TSR, Attachment 1, SAC 5.7.25]

		Revision: 0
		Effective Date: 11/18/16
		Page: 22 of 33

---

## 5.7 RANT Specific Forklift Operations Requirements

The following additional forklift requirements and restrictions are identified in the RANT safety basis document, ABD-WFM-008, Technical Safety Requirements (TSRs) for the Radioassay and Nondestructive Testing (RANT) Site.

- (\$) No flammable liquids or gases and no combustible liquids with NFPA Flammability Rating greater than 1 **SHALL** be used or stored within Building TA-54-38, with the exception of up to two 500-ml containers of ethanol or equivalent, which may be used when needed, and excluding P-10 gas. (LCO 3.3.1)
- (\$) Propane, gasoline, or diesel-fueled vehicles **SHALL not** be used inside Building TA-54-38, except when necessary to put facility in COLD STANDBY. (LCO 3.3.3)
- (\$) Vehicle refueling is prohibited within 30 ft. of Building TA-54-38, CONTAINER STORAGE AREA, and MLU operations. This element of the fire protection program applies only during OPERATION and WARM STANDBY MODE. (AC 5.6.5)
- (\$) A vehicle safety program will be established to ensure that the outside CONTAINER STORAGE AREA is protected from vehicles traversing and operating in TA-54-38 and to ensure these vehicles are maintained and operating in an effective manner. The following elements of are included in this program:
  - Vehicle and forklift maintenance and inspection program. This element of the vehicle safety program applies only during OPERATION and WARM STANDBY MODE.
  - Vehicle barriers to limit access to outside CONTAINER STORAGE AREA to only forklifts. This element of the vehicle safety program applies only during OPERATION AND WARM STANDBY. (AC 5.6.10)
- (\$) Use of spotters during TRU WASTE CONTAINER forklift operations. (AC 5.6.11)
- (\$) Only electric powered forklifts are allowed at the RANT SITE when TRU-waste is present outside of sealed Type B containers. An exception to this control is allowed for vehicles or equipment necessary to support non-emergency, off-normal conditions addressed in LCO 3.3, and for those vehicles described in SAC 5.7.3.B. (SAC 5.7.1.A)

EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
Reference	Revision: 0
	Effective Date: 11/18/16
	Page: 23 of 33

---

**5.7 RANT Specific Forklift Operations Requirements (continued)**

- **(\$)** Vehicle access control. The outdoor CONTAINER STORAGE AREA is protected by a combination of the Building TA-54-38 location, gates, and/or bollards fencing, and restrictions on vehicles allowed in the RANT SITE. Gates and/or bollards and fencing will control vehicle access into and out of the RANT SITE and will only allow electric powered forklifts, electric powered trailer jockey, TRUPACT II tractors, Transportation Safety Documents (TSD) approved vehicles, Department of Public Safety (DPS) vehicles, the diesel-fueled trailer jockey, and the MLU crane. Exceptions: (1) Emergency Vehicles in the case of any emergency; (2) Equipment with less than 5 gal of fuel may be used for grounds maintenance and for snow and ice removal; (3) Vehicles or equipment to support non-emergency, off-normal conditions addressed in LCO 3.3. (SAC 5.7.3.B)
- **(\$)** A Critical Lift Plan **SHALL** be used for all payload lifts involving a forklift for payload transfer or involving a crane for payload insertion into Type B containers. (SAC 5.7.4.A)
- **(\$)** Critical lifts **SHALL not** be performed outdoors during inclement weather conditions or winds above 25 mph. During high-winds or lightning, MLU crane lifting/loading operations **SHALL** be suspended **IMMEDIATELY**, all MLU payloads **SHALL** be secured on the ground away from the immediate area of the MLU cranes, or within the Type B container, and the MLU crane boom **SHALL** be lowered if previously extended. (SAC 5.7.4.C)
- **(\$)** Vehicle driver and forklift operator training and/or qualification. (AC 5.10)

EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086
Reference	Revision: 0
	Effective Date: 11/18/16
	Page: 24 of 33

## 5.8 WCRRF Specific Forklift Operations Requirements

The following additional forklift requirements and restrictions are identified in the WCRRF area specific safety basis document, ABD-WFM-006, Technical Safety Requirements (TSRs) for Waste Characterization, Reduction, and Repackaging Facility (WCRRF).

- (S) Use of spotters is required during TRU WASTE CONTAINER forklift operations and when RNS container(s) are being moved. [AC 5.6.10] [SAC 5.10.9]
- (S) TRU WASTE CONTAINERS **SHALL not** be stacked and **SHALL not** be lifted higher than 4 ft. excluding the Waste Characterization Glovebox drum lift and lifts during loading or unloading from delivery trucks. [SAC 5.10.2.2]
- (S) A critical lift plan **SHALL** be implemented for lifts and forklift movements involving DEGRADED or LOSS OF INTEGRITY TRU drums when **not** secured in a TRU WASTE CONTAINER. [SAC 5.10.3.1]

**NOTE** *Allowing the transportation vehicle on site allows the use of manual assist type drum handling equipment for unloading RNS WASTE CONTAINERS rather than the use of forklifts. It was determined the use of forklifts posed a greater hazard to a RNS WASTE CONTAINER due to the proximity of the fuel source to the RNS WASTE CONTAINER.*

- (S) Propane, gasoline, or diesel-fueled vehicles **SHALL not** be used anywhere at the WCRRF when INVENTORY is present at the WCRRF. Exceptions: (1) Emergency vehicles in the case of any emergency. (2) Equipment with less than 5 gal of fuel may be used for grounds maintenance and for snow and ice removal when INVENTORY is not present in the WCRRF yard (All INVENTORY is within BUILDING TA-50-0069). (3) Transportation vehicle for the delivery of RNS WASTE CONTAINERS and pickup of TRU WASTE CONTAINERS **SHALL** be allowed at the WCRRF. [SAC 5.10.1.1]
- (S) Control of Forklifts (any power source):
  1. Forklifts are prohibited within the boundary of the Vehicle Access System while RNS WASTE CONTAINERS are present in the yard or airlock;
  2. Forklifts are prohibited in BUILDING TA-50-0069 while RNS WASTE CONTAINERS are in TA-50-0069. [SAC 5.10.5]

## 5.9 Abnormal Operations

The following are abnormal conditions specific to forklift and drum handler operations that are not addressed in area specific emergency response procedures.

### Forklift/Drum Handler Operator

- Loose strapping or insufficient banding if pallet is more than 4 feet above ground level:
  - STOP operations
  - WARN personnel in the immediate vicinity
  - NOTIFY Supervision and the Operations Center
  - SAFELY remove the pallet from the stack and lower the pallet to ground level
  - REPAIR the banding at ground level or TIGHTEN the nylon-ratcheting strap
- Forklift and drum handler failure (loss of hydraulics, brakes, power, etc.):
  - PLACE load in an “at rest” configuration
  - WARN others in the immediate area
  - SECURE the forklift and drum handler by shutting down, using wheel chocks, ropes, and barriers if available
  - NOTIFY Supervision and the Operations Center
  - TAG OUT forklift and drum handler with a “Danger Do Not Use” tag or an “Out of Service” tag

EWMO Division Specific Forklift And Drum Handler Equipment Operations	Document No.: EWMO-DOP-20086

#### **5.10     Mobile Loading Payload Lifts at TA-54 Area G**

The following are requirements associated with mobile loading payload lifts for loading TRUPACT containers prior to shipment to WIPP and are provided in accordance with ABD-WFM-002. These controls assist in preventing a mobile loading payload from dropping on top of another payload or a DEFINED AREA containing TRU WASTE and to minimize consequences of a drop by limiting the MAR involved in the accident.

TA-54 Area G procedures developed to perform mobile loading payload lifts **SHALL**, at a minimum, include the following requirements.

- (\$) Mobile loading payloads **SHALL not** be lifted over TRU WASTE, excluding another payload within the Type B container. (SAC 5.7.9.1)
- (\$) Mobile loading payloads with MAR greater than 925 PE-Ci **SHALL not** be lifted more than 12 ft, measured from the bottom of the payload to the ground. (SAC 5.7.9.2)
- (\$) Prior to loading of MAR into a TRUPACT II or HalfPACT, a verification **SHALL** be performed to ensure the containers have a current inspection sticker (provided by WIPP) or documentation of compliance provided by the manufacturer. (DF 6.1.3)
- (\$) A spotter **SHALL** be present for TRU WASTE container lifts greater than 4 ft above the ground surface directly below the TRU WASTE container. [SAC 5.7.8(1)]
- (\$) A critical lift plan **SHALL** be used for planned lifts of the TRU WASTE container greater than 12 ft above the ground surface directly below the TRU WASTE container. [5.7.8(2)]

## 6. POST-PERFORMANCE ACTIVITY

### 6.1 Activity Closeout

#### Forklift/Drum Handler Operator

- [1] **RECORD** name, signature, Z#, and date on the applicable attachments (Attachment 1 and/or 2).
- [2] **IF** Attachment 3, Defective Equipment Report for Forklifts and Powered Industrial Equipment (Form #1569) was generated,  
**THEN FORWARD** copies of the applicable attachments (Attachments 1, 2, and/or 3) to the applicable Operations Center and the EWMO Maintenance Manager.

#### SOS/PIC

- [3] **IF** abnormal conditions were identified during the performance of this procedure,  
**THEN INITIATE** actions to correct the deficiency/discrepancy, such as generating a Nonconformance Report or Performance Feedback and Improvement Tracking System and **DOCUMENT** actions taken in the Comments Section of the applicable attachment.

### 6.2 Records Processing

#### SOS/PIC

Records generated while performing this procedure must be processed and maintained in accordance with EP-AP-10003, Records Management.

Record Name	QA Record	Non-QA Record
Attachment 1, EWMO Forklift Inspection Logsheet	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Attachment 2, EWMO Drum Handler Inspection Logsheet	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Attachment 3, Defective Equipment Report for Forklifts and Powered Industrial Equipment #1569	<input checked="" type="checkbox"/>	<input type="checkbox"/>

**APPENDIX 2**

Page 1 of 1

**MAXIMUM LIFTING CAPACITY AND LOAD CENTER  
CALCULATOR AID AND INSTRUCTIONS**

**NOTE** *This is an aid only and is not considered a quality record and can be discarded after use.*

1. **REVIEW** the Manufacturer's capacity plate to obtain the max lifting capacity at a given rated distance, and **RECORD** in the Worksheet below.
2. **MULTIPLY** the max lifting capacity by the rated distance, in inches, to obtain the inch pound total and, **RECORD** the information in the Worksheet below.
3. **USING** load center listed in the worksheet **DIVIDE** the extended load distances into the inch pounds established to obtain the decreased lifting capacity of forklift in pounds.

**Forklift Reduced Maximum Lifting Capacity Worksheet**

	<i>Maximum Lifting capacity on Manufacturer Capacity Plate (Example: 5,000 lbs. X 24 in. = 120,000 in-lb.)</i>	
Maximum Lifting Capacity _____	X _____	<i>Rated Distance</i> = _____ <i>in-lb.</i>
<b>@ 30 inches</b>	Inch pounds divided by rated distance =	_____ pounds
<b>@ 36 inches</b>	Inch pounds divided by rated distance =	_____ pounds
<b>@ 48 inches</b>	Inch pounds divided by rated distance =	_____ pounds
<b>@ 60 inches</b>	Inch pounds divided by rated distance =	_____ pounds

**EXAMPLE** Given a maximum lifting capacity of 4,000 pounds, AND  
A rated distance of 30 inches, THEN  
The maximum lifting capacity is (30 in. x 4,000 lbs.) = 120,000 in-lb.  
With a load center @ 48 inches, the Reduced Maximum Lifting Capacity is:

$$\frac{120,000 \text{ in-lb.}}{48 \text{ in.}} = 2,500 \text{ lbs.}$$

Next PM Due Date: \_\_\_\_\_

5.1[2] Forklift Type: ☐ Gas ☐ Diesel ☐ LP ☐ Electric

Section 1. Forklifts Visual Inspection (all forklifts) (§) [AC 5.6.6(1)]; 5.1[3]	
Fork	No hairline cracks, broken, or cracked Fastening pins operable, no worn forks
Tires	No cracks in the side walls or tread No flat spots No separation from rim (hard rubber tires only) Proper air pressure (visual check for low or flat)
Mast	Backrest/Carriage in place No excessive wear, or damage on chains and pulleys Limit switches and/or mechanical stops in place and operable Hydraulics (no visual leaks or damaged seals)
Fire Extinguisher (If Equipped)	Inspection tag attached and current Displays fully charged (in green) Displays Hazardous Material Identification System Label (e.g., A, B, C type) or is listed on fire extinguisher manufacturer tag
Mirror (if equipped)	Exterior not cracked, broken or damaged
Cab Glass (if equipped)	Glass not broken, cracked, missing, or shattered
Cab Doors (if equipped)	Operable, shut, latches working properly
Roll Over Protection or Overhead guard	Not bent, or deformed
Seat Belts	Operable
Tags and Placards	Equipped with a Manufacturer's Tag for operation and safe lifting capacity of equipment If equipped with other than factory installed attachments, information is available to the operator through (label, placard or paper copy) that provides operator with information on maximum lifting capacity of forklift with add-on attachment
Annual Inspection Tag	Attached and current
Section 2. Forklifts Operational Checks (all forklifts)	
Mast Controls	Up, Down, Tilt, Side Shift are operable and default in a neutral position
Drive Controls	Forward, Reverse, Park are operable
Horn	Operable
Backup Alarm	Operable
Emergency & Service Brakes	Operable
Gauges and Control Console Components	Operable
Section 3. Gas, Diesel, LP (as applicable)	
Fluid Levels	Adequate Fuel (Gas, Diesel, LP)
Driving Lights	Headlights, turn signals, brake lights operable
LP Tanks (as applicable)	LP tank is properly secured and positioned in cradle with alignment notch down
Section 4. Electric (as applicable)	
Battery Charge	Sufficient charge for work activities
Warning Beacon	Yellow beacon for indoor use (as applicable) operational

		2.5	<b>NOTIFY</b> the applicable Operations Manager of the event, and <b>REQUEST</b> the Operations Manager to notify the FOD.
		2.6	<b>CONDUCT</b> information gathering, such as the following applicable items: <ul style="list-style-type: none"> <li>• Container number and contents</li> <li>• Spills/release</li> <li>• Temporary Limited Area</li> <li>• Weather conditions</li> </ul>
		2.7	<b>EVALUATE</b> the event and <b>DEVELOP</b> actions in accordance with the applicable compliance documents (e.g., Safety Basis, RCRA, Radiation Protection).
		2.8	<b>IF</b> Emergency Response personnel are required, <b>THEN GO TO</b> EWMO-RM-ERP-20200, EWMO Area Emergency Response and <b>EXIT</b> this procedure.
<b>Operations Center</b>			
		3.1	<b>IF</b> actions were developed, <b>THEN IMPLEMENT</b> actions to return area/operations to normal <b>AND DOCUMENT</b> the actions in the Narrative/Comments section of Attachment 1.
		3.2	<b>REVIEW</b> Attachment 1 to ensure all necessary information is complete, and <b>SIGN</b> and <b>DATE</b> the attachment.
		3.3	<b>IF</b> there was a solid/liquid/gas spilled or released to the environment, <b>THEN PROVIDE</b> a copy of Attachment 1 to the Deployed Environmental Professional (EWMO-DEP).
		3.4	<b>PROCESS</b> the procedure as a quality record in accordance with EP-AP-10003, Records Management.

## EWMO-RM-ERP-20200, R.1

# EWMO Area Emergency Response

Effective Date: November 23, 2016

Next Review Date: November 23, 2017

The Responsible Manager has determined that the following organizations' review/concurrence is required for initial release as well as subsequent major revisions. Review documentation is contained in the Document History File:

TA-54 Operations Manager	TA-54 Shift Operations Manager
WCRRF Operations Manager	WCRRF Shift Operations Manager
Safety Basis	Engineering
Deployed Environmental Professional	WPE Process Engineering
Environmental Compliance Programs	Operations Center Operator SME
Industrial Hygiene & Safety	Quality Assurance
Radiation Protection	Security and Emergency Operations
WD-WT Operations	Criticality Safety Officer
WD-WSS Operations	

Classification Review: ☐ Unclassified ☐ UCNI ☐ Classified

**1.0 ENTRY CONDITIONS**

- Request is made for Emergency Response personnel in support of an emergency
- Visual observation of fire or smoke
- Audible fire alarm
- Manual fire pull station activated
- Utility (water, gas, electricity) outages or leaks (water, fuel, sewer, oil) with significant impact to the facility or the environment
- Situation with the likely potential for involvement of more than one emergency response element
- Chemical reaction, such as smoke, fire, or release of a waste container's internal contents to the atmosphere.
- Major injury
- A nitrate salt waste container exhibiting the following conditions:
  - Evidence of heating such as signs of discoloration, paint peeling, or yellowing.
  - Evidence of pressurization such as expansion of side walls or rounded bottom or top.
  - Signs of smoke or fire from a container.

--	---------------------------------------	--

## **1.0 TPP Introduction and Organization**

This Training Program Plan (TPP) defines training requirements for Environmental Programs Directorate, ADEP personnel who do not work in nuclear facilities and personnel working in nuclear facilities in positions not requiring a formal qualification standard. Each position existing within the directorate has specific training requirements that include Institutional mandatory courses and, where applicable, additional unique training expectations associated with a position.

This document provides the basis and expectations for implementing non-nuclear facility training requirements throughout the directorate. It describes the manner in which training is managed, monitored, and documented. Management and training positions requiring qualification are qualified via the Laboratory institutional qualification standards. Documentation of qualification is maintained in the Laboratory learning management systems. Nuclear facility workers' training and/or qualification requirements are addressed in the ADEP Training Implementation Matrices (TIM).

The implementation of the TPP and the TIM ensures ADEP personnel are fully trained and/or qualified to support the Laboratory mission. ADEP regularly monitors employee training to ensure Directorate personnel remain compliant in their assigned training.

### **1.1 Functional Assignments**

ADEP identifies and remediates environmental hazards associated with past laboratory operations, manages and disposes of waste at Los Alamos National Laboratory (LANL), and conducts environmental surveillance to ensure the protection of the environment and the public. Specifically, ADEP manages a suite of institutional programs and services including the Corrective Actions Program (CAP); TA-21 Closure; Waste Projects and Services (WPS); LANL Tru Program (LTP); Business and Project Services (BPS); Engineering and Technology (ADEP-ET); Project Management and Field Services (PMFS); and Regulatory Management (REG-DO).

### **1.2 Organization**

The ADEP organizational structure can be viewed the EP home page at: <http://int.lanl.gov/orgs/adepl/>. ADEP workers may be deployed to support specific projects or facilities. Their EP division or home organizations are responsible for ensuring their employees have the core training necessary to perform required tasks, while the facilities or projects are responsible for ensuring that appropriate facility, project, and/or position-specific training is provided.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 4 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

## 2.0 Roles and Responsibilities (R2)

Responsible Line Managers (RLMs) are accountable for their personal training and the training of their assigned workers. FODs are accountable to identify facility-specific training required to allow unescorted access to controlled facilities or for building emergency plans and training for administrative facilities. Training specialists and subject matter experts (SMEs) provide technical expertise and perform training tasks. This document further defines the R2 for ADEP to ensure the goals of the Training Program are met.

### Associate Director for Environmental Programs

- Serve as Program Owner for the TPP and delegate such responsibilities as deemed appropriate.
- Provide direction to the ADEP management team and expectations for implementation of the TPP.

### Division-level Managers

- Ensure implementation of the TPP.
- At least biannually review the TPP for changes to include identification of positions training requirements.
- Review TPP and provide input regarding requirements for directorate positions.
- Assign specific training courses/plans to workers and ensure assigned training is completed.

### Functional Managers

- Ensure implementation of the TPP.
- When assigning job duties, ensure the appropriate/required training for the duties is assigned and completed by the individual.
- Review the TPP and provide input regarding training requirements for directorate positions.
- Assign specific training courses/plans to workers and ensure assigned training is completed.

### Group Managers

- Ensure implementation of the TPP.
- When assigning job duties, ensure the appropriate/required training for the duties is assigned and completed by the individual.
- Review periodic training reports and ensure workers are current with assigned courses and plans.
- Review workers' training plans at least annually.
- Review the TPP and provide input regarding training requirements for directorate positions.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 5 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

#### Project Managers

Ensure project specific training requirements are identified and project members are trained.

#### Subcontractor Technical Representatives (STR)

Obtain training records from LANL learning management systems, as necessary, to demonstrate subcontractor compliance with LANL training requirements.

Ensure subcontractor personnel are properly trained and qualified to perform work.

#### ADEP Personnel

Complete assigned training courses/plans.

Ensure training requirements are kept current.

#### Deployed Training Services

Assist with development and maintenance of the TPP.

Develop and maintain TIMs.

Advise on position identification regarding training requirements.

Course development and implementation.

Manage the LANL learning management systems to include establishing courses/plans, assigning training to individuals as directed by organizational managers; providing periodic reports of training status.

Support managers in identification of training requirements and development of Qualification Standards in accordance with P781-1, *Conduct of Training Manual*.

#### Facility Operations Directors

Define facility specific training requirements.

Provide ADEP personnel, as necessary, facility specific training to allow them to work successfully under the FODs purview.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 6 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

### **3.0 General Training Administration Requirements**

#### **3.1 Initial Training**

Initial training requirements are analyzed, designed, developed, implemented, and evaluated using a graded approach and Systematic Approach to Training (SAT) methodology as described by the *Conduct of Training Manual* (P 781-1). Personnel may not be assigned to work independently on any position(s), job(s), and/or task(s) until they have met the necessary initial training requirements. Initial training programs consist of a combination of classroom, self-study, workshop, and on-the-job training (OJT). Personnel who are responsible for developing, approving, and delivering current and approved training are excused from initial and continuing training in the area for which they are designated an SME (as long as they continue to serve as SMEs). For example, an individual who prepares, instructs, and/or grades a written examination is not required to take the examination.

#### **3.2 Continuing Training**

Continuing training is designed to maintain job proficiency. Continuing training must be developed based on job or needs analysis commensurate with specific position /functions. Continuing training may include retraining on critical, complex, or infrequently performed tasks; or refreshers for safety, security, and regulatory requirements, and it is a means for personnel to remain current on such topics as:

- changes to regulatory requirements,
- changes to the job position,
- significant changes in procedures,
- changes in plant systems or equipment, and
- lessons learned.

Additionally, some continuing training is completed by personnel in order to maintain professional credentials and/or external certification requirements.

#### **3.3 Selection and Qualification of Instructors**

CT Division training staff and other Laboratory workers developing and implementing training must be qualified at a level commensurate with their assigned responsibilities. The education, experience, and qualification requirements for training staff are specified in P781-1, *Conduct of Training Manual*.

#### **3.4 Subcontracted Training**

Training by external providers is not anticipated to be widely employed by ADEP Directorate. If identified as a need, the subcontract organization and their specifically identified trainer(s) are evaluated by Central Training Division (CT) deployed resources and/or ADEP functional managers to ensure adequate knowledge of the field being presented and qualification in accordance with P781-1 are provided.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 7 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

### **3.5 Training Program Budget**

Budget resources for the ADEP Training Program are negotiated annually as part of the Customer Service Agreements (CSAs). For specific data about the budget, refer to the current CSA.

### **3.6 Training Program Assessments and Evaluations**

The evaluation phase of training takes place to determine the effectiveness of training and training programs and to identify improvements that may be required. Assessments of the training program may be conducted by CT or ADEP managers. Evaluation tools may include observations, interviews, and/or questionnaires. If training-related worker performance problems exist, the solution may involve repeating portions of the analysis, design, and development activities and the revision of existing materials.

#### **3.6.1 Course Evaluation**

Evaluation of courses and/or other training activities are to be conducted at the conclusion of each session. Trainees will be provided with questionnaires measuring the learner's reaction to training content, presentation, and materials.

#### **3.6.2 Trainee Evaluation**

Trainees are assessed to determine the level of learning gleaned from training by written assessment and/or performance demonstration.

## **4.0 Records Management**

---

Official training records are maintained in the LANL learning management system. When specific reports of training status are required to support workforce training and qualification, printouts from the system are provided. Such documents when deemed to be records are maintained by the organization or project in accordance with *EP-DIR-AP-10003 Records Management Procedure for ADEP Employees*.

Reports from the LANL learning management systems are considered in-process/non-permanent when used for communication of status to the workforce. When used to demonstrate training status in showing completion of training requirements for work to be preformed, the reports are deemed to be records.

### **4.1 Training Records**

Training records include but are not limited to SAT documentation, course materials, course rosters, and learning management system reports.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 8 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

## 5.0 General Training Implementation Requirements

ADEP personnel are assigned to ADEP core requirements training plans and to any position-specific training plans determined by the RLM. Personnel deployed to ADEP are trained in their field of study by their home organization and will be assigned to ADEP core requirements training plans and/or any required ADEP position-specific training to be determined by the ADEP manager with guidance/input from the training specialist.

During the training period, personnel may perform position duties under the supervision of a fully trained individual until the candidate has completed all training requirements. The level of training is determined by position-specific functions. Training can be delivered live, via web-based instruction, classroom instruction, briefings, required-reading, workshops, and/or on-the-job training (OJT).

### 5.1 Retraining

Re-training, continuing, or refresher training requirements are identified in the training analysis phase or as mandated by directives or regulations. Re-training utilizing lessons learned from real-world and exercise events is provided to workers to maintain job proficiencies and promote or improve job performance.

### 5.2 Equivalencies to Training

Equivalencies may be considered based on documented experience and/or education and are managed in accordance with P781-1, Conduct of Training Manual (3.1.5) using form 2154, *Request a Training Equivalency* and are approved by the appropriate Division Leader.

## 6.0 Training Classification Level Determination

ADEP training level determinations are based on typical entry-level knowledge, skills, and abilities (KSA) for each position; if the work requires an IWD; and the risks associated with performance failure. Because ADEP is organized functionally (i.e., by technical discipline), training requirements will vary within each division or program office. In addition to institutional training requirements, ADEP employees are assigned to ADEP-required training including but not limited to the EP Quality Assurance Plan; Behavior Based Training (ATOMICS), and the Integrated Work Management (IWM) Overview. Some positions also have position-specific training and/or reading requirements. The ADEP Level 3 Determinations, which apply to nuclear facilities per section 3.2.1.c of the Conduct of Training Manual, are addressed in the TIM.

ADEP training classification level determinations are defined as:

- **Determination level 1: Worker Training and Authorization**  
Workers at this level complete institutional and facility specific training requirements. Level 1 positions include but are not limited to support staff and scientists.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 9 of 12 Effective Date: 03/16/12
--	---------------------------------------	--

- **Determination level 2: Worker Training and Qualification for Nonnuclear and Radiological Facilities**

In addition to institutional and facility specific training requirement, workers are typically assigned to additional position-specific and/or formal qualification standards (QS), or work under an Integrated Work Document (IWD). Level 2 positions include but are not limited to managers, training staff, and environmental technicians.

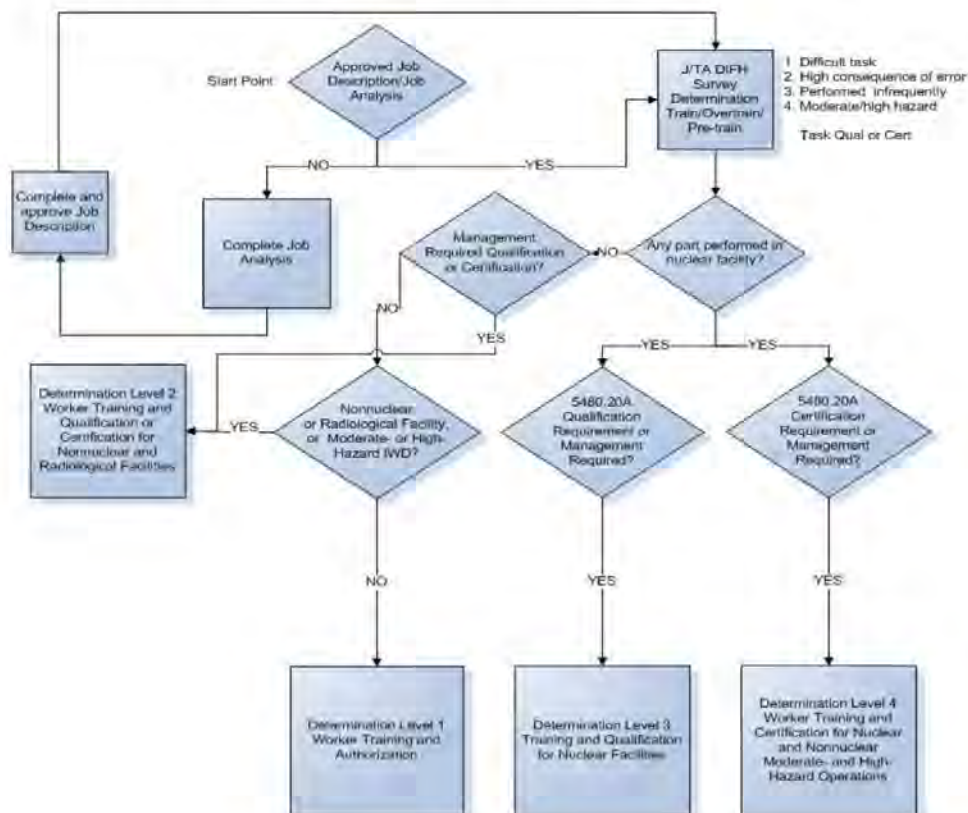

- **Determination level 3: Worker Training and Qualification for Nuclear Facilities**

These positions are identified in the ADEP TIM.

- **Determination level 4: Worker Training and Certification for Nuclear and Nonnuclear Moderate and High Hazard Operations**

Workers at this level perform tasks or activities with unacceptable risk for inadequate performance whether nuclear, nonnuclear, moderate- or high-hazard operations. Certification is also required by due diligence.

ADEP will use the process below for determining the training classification level for workers. Refer to Appendix 1 for the ADEP Nonnuclear Training Classification Level Determination Matrix.

Title: Environmental Programs Directorate Training Program PLAN	No.: EP-DIR-PLAN-10008 Revision: 1	Page 10 of 12 Effective Date: 03/16/12
--	---------------------------------------	---

## **7.0 Quality Assurance**

---

ADEP will establish an evaluation team to conduct a comprehensive training program evaluation triennially. The evaluation will cover all aspects of the training program and will be used to identify strengths and/or deficiencies in the training program and the overall training program infrastructure. The reviews will be staggered so only one division or program is being evaluated at any one time.

## EWMO-BEP-20048, R.0

# EWMO Division Building Emergency Plan (BEP)

Effective Date: 8/29/2016

Next Review Date: 8/29/2019

The Responsible Manager has determined that the following organizations' review is required for initial procedure release as well as subsequent major revisions. Review documentation is contained in the Document History File.

EWMO Shift Operations Managers	Safety Basis
Engineering	Deployed Security Officer
Environmental Compliance Programs	Fire Protection
Industrial Hygiene & Safety	Operations Center SMEs
Quality Assurance	Criticality Safety
Radiation Protection	Shift Operations Supervisors
Emergency Management	WD Operations

Classification Review: ☒ Unclassified ☐ UCNI ☐ Classified

### REVISION HISTORY

A comprehensive log of changes made to this procedure, including superseded documents and complete revision descriptions, is accessible through the Electronic Document Management System (EDMS). The following log is abridged to one page and includes only the latest revisions.

Document/Rev No.	Issue Date	Action	Description
EP-DIV-BEP-20048, R.1	December 10, 2013	Minor Revision	Revise procedure to remove the OUO designation in accordance with SAFE-1. This revision does not introduce any new hazards.
EP-DIV-BEP-20048, R.2	September 22, 2015	Major Revision	Revised to meet PFITS actions 2015-421-3, 2015-421-6, 2015-424-1, and 2015-421-2. Also updated per P1201-4, LANL Emergency Procedures and Protective Actions. Removed all SWANS Radio references including Appendix 2.
EWMO-BEP-20048, R.0	August 29, 2016	Major Revision	Revised plan as part of WCRRF Resumption activities. Changed "Assembly/Muster Area" to "Assembly Area" throughout. Changed "off-normal" to "abnormal" throughout. Made minor editorial changes. The above global changes are not marked with revision bars. Added information on operator response cards in Section 3. Added 375 PermaCon Nitrate Salt Container Abnormal Response procedure to table in Section 5.3.2. Updated titles in response tables in Sections 5.3.1 and 5.3.2. Moved paragraph in Section 8 for consistency. Updated Sections 12 and 13. Updated Appendixes 1, 3, 7, and 9. Added new Appendixes 10–13. This procedure is a complete rewrite; no revisions bars were used. Replaced "EP-DIV" with "EWMO" in procedure number.

**1. PURPOSE**

The Environment and Waste Management Facility Operations (EWMO) Building Emergency Plan (BEP) captures the Site Emergency Management and Response program requirements from Los Alamos National Laboratory (LANL) P1201-4, Emergency Procedures and Protective Actions, and P315, Conduct of Operations Manual. In addition, the EWMO BEP identifies area-specific response requirements for (1) Technical Area (TA)-50-69 Waste Characterization, Reduction, and Repackaging Facility (WCRRF) complex; (2) TA-54 Areas G, H, J, L, and TA-54 Administrative Areas; and (3) TA-54 Radioassay and Nondestructive Testing (RANT) Building 54-38 complex.

The plan also addresses the requirements of the LANL Hazardous Waste Facility Permit. Areas covered by this plan include permitted units that are required to have a Contingency Plan in case of an emergency.

**2. SCOPE**

EWMO BEP requirements apply to all personnel, subcontractors, tenants, and visitors entering TA-54 Areas G, H, J, L, TA-54 Administrative Areas, RANT, and the WCRRF complex.

This plan does not apply to non-occupied locations TA-21 and Nuclear Environmental Sites (NES). All work performed at TA-21 and NES will be approved by the Shift Operations Manager/Operations Manager and be scheduled on the Environmental Remediation (ER) Plan of the Day. Accountability and communications will be performed in accordance with the ER Standing Order.

Building residents who are assigned and qualified for escorting visitors assume the responsibility for ensuring that visitors possess the appropriate level of area-specific information (e.g., rules, regulations, exits, evacuation routes, Assembly Areas, area-specific alarms, and response procedures) necessary to respond appropriately in the event of an abnormal or emergency situation. Management has the overall responsibility for personnel accountability during an abnormal/emergency event.

The EWMO BEP will be reviewed on an annual basis and updated as necessary for changes that alter the scope of this document, corrections based on internal and audit findings, emergency drill and exercise lessons learned, external changes in governing standards and references, and changes to facility operations and associated hazards.

		Revision:	0
		Effective Date:	8/29/2016
		Page:	6 of 48

---

**3. OVERVIEW**

The EWMO BEP plays a key role in the successful implementation of the Site Emergency Management and Response program, Conduct of Operations, and area-specific response procedures for TA-54, WCRRF, and RANT. This plan also defines roles and responsibilities that are necessary to ensure that the chain of command is established and to ensure that employees respond correctly and consistently in a safe and timely manner when abnormal/emergency situations arise. Section 5, BEP Requirements, provides the requirements, roles, protective equipment, and standardized responses (i.e., Notification, Abnormal, and Emergency) for employees working in EWMO facilities. Sections 6 through 8 provide building/area-specific requirements for WCRRF, TA-54, and RANT.

The standardized responses (Notification, Abnormal, and Emergency) provided in Section 5 are also available in abbreviated format as an operator response card. Appendix 9, Abnormal/Emergency Response Card, provides an example of the card that workers may carry with them when working in an EWMO facility.

Figure 1, Emergency Management Process Requirements Flow-Down, illustrates the requirements derived from Department of Energy to LANL and into the EWMO BEP.

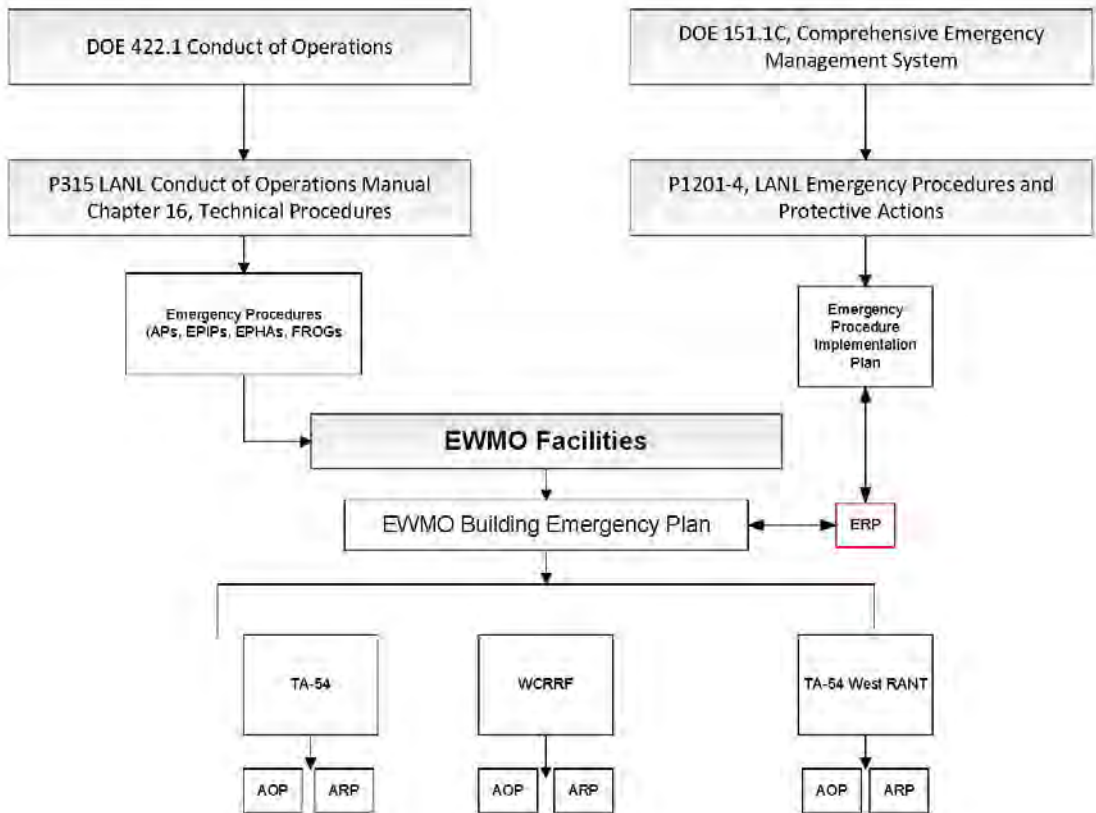

EWMO Division Building Emergency Plan (BEP)

---

#### 4. RESPONSIBILITIES

##### 4.1 First Responder at the Awareness Level

The first responder (i.e., first person at the scene of an abnormal/emergency event) at the awareness level has the following responsibilities:

- Stops or suspends work
- Activates the appropriate alarm (i.e., fire alarm; evacuation alarm, where available), as necessary
- Warns others in the immediate area of the abnormal/emergency event
- Secures the incident area to prevent others from entering
- Notifies the Operations Centers, Emergency Operations and Support Center (EOSC) at 7-6211, and/or 911 as appropriate

##### 4.2 Shift Operations Manager/Facility Lead

**NOTE** *In EWMO facilities, the Shift Operations Manager (SOM) is the Facility Operations Director (FOD) designee in the field and assumes responsibilities as the Facility Leader (FL). The SOM/FL assumes the role of the FOD in the field. However, an Operations Manager (OM) may also conduct FL duties as long as the OM is trained, qualified, and knowledgeable of the area operations.*

The SOM/FL is the person in charge of the facility during an abnormal/emergency event and/or up until transfer to the Incident Commander (IC).

The SOM/FL has the following responsibilities:

- Coordinates with the Assembly Area Leader for personnel accountability, conditions, and locations
- Ensures that 911 or EOSC 7-6211 has been called, as necessary
- Updates the OM/designee of the situation
- Evaluates the event and potential hazards and determines whether additional evacuations are necessary
- Works with support personnel to mitigate the event within the EWMO facility

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	9 of 48

---

**4.2     Shift Operations Manager/Facility Lead (continued)**

- Available on-call outside normal working hours including nights, weekends, and holidays when assigned
- Determines appropriate actions for mitigation and notifications during an abnormal event
- Ensures appropriate actions are completed to protect the safety of workers, facility, equipment, records, and the environment
- Authorizes elevation of an abnormal event to an emergency event as necessary
- Makes notifications in accordance with applicable response procedure
- Ensures that employees who may need special assistance are identified, and designates personnel to assist these employees
- Ensures accountability of all personnel
- Evaluates the potential hazards and determines the protective actions
- Briefs emergency responders and management personnel during an emergency
- Assists the IC in recovery and reentry efforts
- Transfers command and control to the IC and notifies Operations Center personnel when command and control is transferred, and then becomes a support function to the IC

**4.3     Incident Commander**

A trained and qualified emergency professional from emergency management, Centerra Los Alamos (the Laboratory's protective force), Los Alamos County Fire Department, Los Alamos County Police Department, or other federal authority having jurisdiction that takes command and control of the event.

- Manages the emergency event until mitigated or transferred back to the SOM/FL
- Authority to call out other response personnel and additional resources
- Assumes the role of IC during an emergency event

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	10 of 48

---

#### **4.4     Shift Operations Supervisor**

- Assists the SOM/FL to determine appropriate actions for mitigation and notifications during abnormal events
- Serves as a resource for the FL/IC and offsite responders during abnormal/emergency events
- Ensures that actions are initiated to protect the safety of site workers, programmatic equipment, records, and the environment
- Ensures that employees who require special assistance during an emergency are supported

#### **4.5     Operations Center Operator**

- Notifies personnel through various communication systems (e.g., E-pagers, public address system, land-line, two-way radio, cell phone, and face to face) on initial abnormal/emergency activities at WCRRF, TA-54, and TA-54 West RANT.
- Notifies adjacent facilities of abnormal/emergency events as applicable
- Facilitates command and control functions under the direction of the SOM/FL until turned over to the IC
- Records and logs initial and ongoing notifications in accordance with this plan
- Acts as a liaison between SOM/FL, IC, and the workers
- Coordinates accounting of personnel at the Assembly Areas
- Assists in directing emergency response personnel and equipment to emergency site/areas
- Maintains a written log of abnormal and/or emergency events in the Operations Center log book
- Develops and maintains the Emergency Contact List at the respective Operations Center (Appendices 3, 5, and 8)
- Provides information from the Waste Compliance and Tracking System (WCATS) as needed.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	11 of 48

---

**4.6     Support Personnel (Environment, Safety, and Health)**

- Receives notification from the Operations Center and/or SOM/FL when an abnormal/emergency event arises as necessary
- Acts as a subject matter expert in their field of expertise (e.g., Industrial Hygiene and Safety) during abnormal/emergency events
- Supports IC or SOM/FL in developing remedial and recovery plans

**4.7     Assembly Area Leader**

- Assumes command of Assembly Area
- Collects and gathers information from personnel who were at the incident site
- Acts as liaison between the applicable Operations Center and personnel
- Initiates the accountability of personnel
- Makes notification to the applicable Operations Center
- Ensures that personnel who may be radiologically contaminated are segregated from the general population
- Delegates tasks as necessary to employees at the Assembly Area during an emergency event
- Directs vehicle traffic on roadways to ensure emergency response vehicles have an open route to the event area as necessary
- Collects all information from Assembly Area (e.g., rosters, notes generated) and provides to the Operations Center and Shift Operations Manager

		Revision:	0
		Effective Date:	8/29/2016
		Page:	12 of 48

---

**4.8     Facility Resident**

- Notifies the applicable Operations Center of abnormal/emergency events
- Notifies the applicable Operations Center, EOSC 7-6211, and/or 911 for emergency events
- Responds to abnormal/emergency events in accordance with the requirements of this plan and the facility-specific abnormal/emergency response procedures
- Performs assigned duties from Assembly Area Leader
- Performs escort responsibilities if assigned

**4.9     Visitor**

- Responds to alarms and notifications in the event of an abnormal/emergency event
- Stays with their designated escort during abnormal/emergency events

## 5. BEP REQUIREMENTS

### 5.1 Site Events

The Laboratory has identified the abnormal/emergency events (e.g., chemical, biological, radiological, fire, security, weather, vehicular accident, and personnel injury) that may affect the general Laboratory population, the public, and the environment. These events and their responses are captured in LANL policies and procedures and are listed in Table 1, General Site Events and References.

**NOTE** *Unless otherwise recommended or directed by EWMO management, events listed in Table 1 are specific events with associated response actions provided in the referenced document.*

TABLE 1. GENERAL SITE EVENTS AND REFERENCES

Event	Reference
Bomb threat	P1201-4, LANL Emergency Procedures and Protective Actions
Continuity of Operations (COOP)	P1201-4
Fire, Smoke, and Explosion	P1201-4
Flood	P1201-4
Hazardous Substance/Chemical Spill	P1201-4
Lightning	P1201-4
Power Outage	P1201-4
Security Concern	P1201-4
Seismic Event (Earthquake)	P1201-4
SIP/Stay Put	P1201-4
Snow and Ice	P1201-4
Suspicious/Unattended Packages	P1201-4
Unexploded Ordnance	P1201-4
Vehicle Accidents	P101-7, Vehicles and Pedestrian Safety
Work Related Injury, Illness	P102-2, Occupational Medicine
Workplace Violence	P1201-4
Lock Down/Hide Out	P1201-4

---

## **5.2 Facility-Specific Procedures**

TA-54 and WCRRF Operations Centers maintain controlled copies of the facility-specific response procedures that apply to TA-54, WCRRF, and RANT. Three types of response procedures are used at EWMO facilities in accordance with P315, Conduct of Operations Manual, Section 16, Technical Procedures.

### **5.2.1 Abnormal Operating Procedure (AOP)**

AOPs provide instructions for responding to events that affect several systems, threaten the safety envelope, or require action to mitigate damage.

### **5.2.2 Alarm Response Procedure (ARP)**

ARPs direct the response of personnel to visible and audible alarms.

### **5.2.3 Emergency Response Procedure (ERP)**

ERPs provide instructions for responding to an emergency in progress. ERPs include steps or reference other procedures that define the response to additional casualties that could result from the initial event.

## **5.3 Response Actions**

EWMO has developed the following three worker response actions.

### **5.3.1 Notification Response**

The notification response is a notification by the worker of an upset condition. Notification response does not require immediately exiting or evacuating. Once the worker has completed the notification response steps, the SOM/FL and/or support team will provide guidance and protective measures for the worker through the applicable Operations Center.

The notification response action is as follows:

1. **NOTIFY** the Operations Center.
2. **WARN** others.
3. **WAIT** for directions from the Operations Center and FL/IC.

**EWMO Division Building Emergency Plan (BEP)**

Document No.: EWMO-BEP-20048  
Revision: 0  
Effective Date: 8/29/2016  
Page: 15 of 48

Reference

5.3.1 Notification Response (continued)

The following events have been categorized as requiring a Notification Response:

TA-54 Area G	RANT	WCRRF
<ul style="list-style-type: none"> <li>• Loss of Electronic Badge Reader</li> <li>• 231 PermaCon Low D/P Alarm</li> <li>• 375 PermaCon Low Cell D/P Alarm</li> <li>• Inadequate Fire Department Manning</li> <li>• Severe Weather</li> </ul>	<ul style="list-style-type: none"> <li>• Loss of Electronic Badge Reader</li> <li>• Inadequate Fire Department Manning</li> <li>• Severe Weather</li> </ul>	<ul style="list-style-type: none"> <li>• Loss of Electronic Badge Reader</li> <li>• Inadequate Fire Department Manning</li> <li>• WCRRF Loss of Confinement Ventilation System (CVS)</li> <li>• WCRRF WCG Fire Suppression Inadvertent Initiation</li> <li>• WCRRF WCG High Pressure Alarms</li> <li>• WCRRF CVS Low Flow Alarms</li> <li>• WCRRF CVS Room 102 High Pressure Alarms</li> <li>• WCRRF CVS HEPA Filter Alarms</li> <li>• WCRRF CVS GBE High Pressure Alarms</li> <li>• WCRRF TE/TI-001 and 002 Low Temperature Alarms</li> <li>• WCRRF CVS HVA-001 Low Flow Alarm</li> <li>• Severe Weather</li> </ul>

5.3.2 Abnormal Response

An abnormal response is an action taken by the worker in a timely manner to ensure he/she backs away from the immediate area (i.e., out of harm's way) until the event can be evaluated and appropriate actions taken to mitigate the situation to prevent it from elevating to an emergency.

The abnormal response steps are:

1. **SUSPEND** work.
2. **WARN** others.
3. **ISOLATE** the immediate area.
4. **MOVE AWAY** upwind from the area of concern.
5. **NOTIFY** the Operations Center.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	16 of 48

### 5.3.2 Abnormal Response (continued)

For Nuclear Criticality Safety Non-Compliance, the following additional response steps **SHALL** be performed by the operator during an abnormal response in accordance with EWMO-RM-AOP-20124, EWMO Nuclear Criticality Safety Requirement Non-Compliance.

1. **DO NOT ATTEMPT** to recover the situation.
2. **CONTROL** access to the area.
3. **MAINTAIN** a minimum distance of at least 15 feet from the incident area.

Management (i.e., Operations Responsible Supervisor and/or Operations Responsible Manager) must work with the Nuclear Criticality Safety Division (NCSD) and other relevant personnel to assess the situation and take no actions until the situation is assessed in accordance with SD130, Nuclear Criticality Safety Program.

Once the worker has performed the abnormal response steps listed above, there are no further actions taken by the worker to mitigate the incident at this time. The SOM/FL and the support team will provide guidance and protective measures to the workers through the applicable Operations Center.

The following list provides events that have been categorized as requiring an abnormal response:

TA-54 Area G	RANT	WCRRF
<ul style="list-style-type: none"> <li>• Discovery of an Airborne, Liquid or Solid Material Release or Spill</li> <li>• Unplanned Loss of Electrical Power</li> <li>• Waste Container Questionable Integrity</li> <li>• Nuclear Criticality Safety Non-Compliance</li> <li>• 375 PermaCon Nitrate Salt Waste Container Abnormal Conditions</li> </ul>	<ul style="list-style-type: none"> <li>• Discovery of an Airborne, Liquid or Solid Material Release or Spill</li> <li>• Unplanned Loss of Electrical Power</li> <li>• Waste Container Questionable Integrity</li> <li>• Nuclear Criticality Safety Non-Compliance</li> </ul>	<ul style="list-style-type: none"> <li>• Discovery of an Airborne, Liquid or Solid Material Release or Spill</li> <li>• Loss of Glovebox Integrity</li> <li>• Unplanned Loss of Electrical Power</li> <li>• Waste Container Questionable Integrity</li> <li>• Nuclear Criticality Safety Non-Compliance</li> </ul>

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	17 of 48

### 5.3.3 Emergency Response

An emergency response are actions taken by the operator in the event of an emergency to ensure personnel safety and prompt notification to management and/or Emergency Management. There are no actions taken by the worker to attempt to mitigate the event. Once the worker has performed the emergency response steps listed below, the EOSC, 911, SOM/FL, and the support team will provide guidance and protective measures to the workers through the applicable Operations Center.

The emergency response activities are as follows:

1. **SUSPEND** work.
2. **WARN** others.
3. **ISOLATE** immediate area.
4. **EVACUATE** to an Assembly Area upwind from the incident.
5. **NOTIFY** 911 and the Operations Center.

TA-54 Area G	RANT	WCRRF
<ul style="list-style-type: none"> <li>• EWMO Area Emergency Response               <ul style="list-style-type: none"> <li>– Visual observation of fire or smoke</li> <li>– Audible fire alarm</li> <li>– Utility outage or leaks</li> <li>– Chemical reactions such as smoke, fire, or release of a container's internal contents to the atmosphere</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• EWMO Area Emergency Response               <ul style="list-style-type: none"> <li>– Visual observation of fire or smoke</li> <li>– Audible fire alarm</li> <li>– Utility outage or leaks</li> <li>– Chemical reactions such as smoke, fire, or release of a container's internal contents to the atmosphere</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>• EWMO Area Emergency Response               <ul style="list-style-type: none"> <li>– Visual observation of fire or smoke</li> <li>– Audible fire alarm</li> <li>– Utility outage or leaks</li> <li>– Chemical reactions such as smoke, fire, or release of a container's internal contents to the atmosphere</li> </ul> </li> </ul>

### 5.4 Operations Center Response Protocol

Upon entering the abnormal or emergency response procedure (i.e., AOP or ERP) the SOM will designate roles and responsibilities (record keeping, log keeping, phones, communications systems) to members of the Operations Center. The SOM's primary duty during an abnormal/emergency event is to act as the facility leader and overall controller of activities and operations in order to maintain attention to the incident. The response procedure is used to document all event activities (e.g., times, dates, actions) and is a quality record. The Operations Center Operator logbook is the official logbook that requires documenting the entry into, and exit from, the response procedure and other important non-incident specific information. The SOS and SOM are not required to keep logs during the incident. When a facility enters an ARP, the Operations Center will be notified, but other activities at the facilities will continue normal operations, including the Operations Center, unless deemed otherwise by the SOM.

		Revision:	0
		Effective Date:	8/29/2016
		Page:	18 of 48

## 5.5 Assembly Areas

Assembly Areas are designated areas for workers and visitors to gather in the event of an emergency or as directed by the SOM/FL.

The Assembly Areas can be Shelter in Place locations, identified in buildings or outside, identified by a large yellow metal box and an orange and white striped wind sock on a pole. Assembly Area maps for WCRRF, TA-54, and RANT are illustrated in the appendices of this procedure. Assembling to a secondary location after initial evacuation if necessary is directed by the Operations Center/SOM/FL and/or the IC.

**NOTE** *Assembly Area equipment and supplies are inspected weekly in accordance with EWMO-DOP-20215, EWMO RCRA Inspections and Notifications.*

Assembly Areas contain at a minimum the following equipment and supplies for use during abnormal/emergency events:

- A clipboard with Assembly Area Accountability Report (an example report is shown in Appendix 10) and two-way radio instructions (Appendix 11)
- A copy of this Building Emergency Plan
- Assembly Area lead vest (blue)
- Assembly Area Leader Checklist (instructions for the Assembly Area Leader are shown in Appendix 12)
- First aid kit
- Two-way radio
- Wind sock (i.e., orange and white stripes)
- Orange vest (for personnel performing traffic control)

The first person to arrive at the Assembly Area during an emergency who is knowledgeable and willing to perform the duties assigned, acts as the Assembly Area Leader. A checklist is available at each Assembly Area that provides actions to be performed by the Assembly Area Leader. Any rosters, checklists, or other documents completed by the Assembly Area Leader should be turned over to the SOM/FL for records processing after the emergency has ended.

		Revision:	0
		Effective Date:	8/29/2016
		Page:	19 of 48

---

## 5.6 Accountability

Each worker has the primary responsibility to report to the Assembly Area Leader for accountability.

In EWMO organizations, there are three methods for obtaining personnel accountability during an abnormal/emergency event:

- Badge reader
- Sweep process
- Assembly Area Accountability Reports at Assembly Areas (refer to Appendix 10 for an example accountability report)

The electronic badge reader system records and tracks personnel who enter and exit TA-54 Area G, TA-54 Area L, RANT, and WCRRF. If a situation arises where personnel accountability is required, the applicable Operations Center can generate a personnel accountability report from the badge reader system which provides a list of personnel currently logged into a specific area (e.g., TA-54 Areas G, L, RANT, and WCRRF).

The sweep process is used primarily in administration areas and other areas that do not possess an electronic accountability system. When personnel are required to evacuate, each person will perform a visual sweep and verbal communications (e.g., "Is anyone here? The area is being evacuated.") for personnel in the exit route out of the building. The last person to egress the facility will provide personnel accountability information to the Assembly Area Leader. Once employees assemble at the Assembly Areas, they will complete a sign-in sheet/roster to document their location.

In all three methods, personnel not accounted for will be communicated to the FL/IC.

## 5.7 Protective Actions

### 5.7.1 Shelter-In-Place (SIP) Instructions

Employees follow protective actions in P1201-4 in additions to the following response at TA-54 Area G: Personnel in vehicles should roll up windows and close vents that draw in outside air (including heater and air-conditioning vents, if applicable), remain at the location, and notify the Operations Center. Do not leave the location until cleared by Incident Command. Additional instructions for SIP are shown in Appendix 13.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	20 of 48

---

#### 5.7.2 Stay Put

Employees follow Stay Put guidance in P1201-4 in addition to the following responses if lightning is sighted:

- Follow the 30/30 rule
- Seek shelter if lightning is within 6 miles (flash to bang count is 30 seconds)
- Move away from any metal objects and grounding system components
- Do not remain upright in an open area or seek shelter near tall, upright objects (e.g., trees), take cover in a vehicle or building
- Shelter for at least 30 minutes after the last lightning strike within 6 miles
- Notify the Operations Center of actions and location

#### 5.8 Chain of Command Process

The chain of command is the process that identifies positions, roles, and responsibilities for those individuals who are designated and authorized as the person-in-charge during an abnormal/emergency event.

The FL (e.g., SOM, OM) directs the initial command and control during an abnormal/emergency event. The SOM/FL is a person who possesses the experience and knowledge associated with the area to lead the facility management and workers in an abnormal/emergency response and/or until relieved by the Site IC. An IC will be a designated Emergency Management person who responds as the individual authorized by the institution with the authority and responsibility for command and control at the incident scene.

When the responsibility for command and control is transferred to the IC, the SOM/FL remains available to the IC for area-specific technical support and assistance. A formal transfer of duty from the SOM/FL to the IC is required in a timely manner. Transferring command and control back to the SOM/FL is also a formal process. The level of formality is based upon the severity level of the event.

**5.8 Chain of Command Process (continued)**

EWMO utilizes the Operations Center model at WCRRF and TA-54 as part of the EWMO organizational structure. The TA-54 and WCRRF Operations Centers act as a liaison between EWMO management, Facility Lead, IC, Security Emergency and Operations - Emergency Management (SEO-EM), and the workers. The TA-54 and WCRRF Operations Centers are staffed during normal operations. The notification process for off-normal hours is performed through the EWMO on-call list and Emergency Operations and Support Center (EOSC) 7-6211.

**EWMO Division Building Emergency Plan (BEP)**

Document No.: EWMO-BEP-20048

Revision: 0

Effective Date: 8/29/2016

Page: 21 of 48

Reference

Figure 2, Chain of Command Model

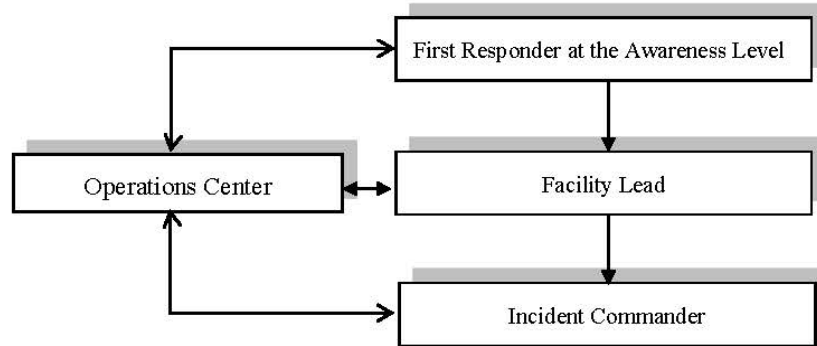

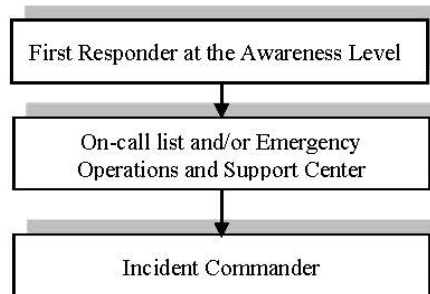

Figure 3, Chain of Command Model Off-Hours

**5.9 EWMO Communication Equipment and Warning Systems**

EWMO maintains a variety of communication equipment and warning systems to effectively communicate with personnel and emergency responders when abnormal/emergency situations arise.

**Cell Phones** – Cell phones may be used for notifying the applicable Operations Center, EOSC 7-6211, and 911. Cell phones may also be set-up to receive emergency text messages the same as E-Pagers. If cell phones are used to contact 911, callers must communicate their location and the location of the event. Cell phones are a primary means of communication during an abnormal/emergency event.

**Conventional Telephones** – Conventional telephones and land lines may be used to notify the Operations Center, EOSC, and 911 in the event of an abnormal/emergency event.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	22 of 48

---

## 5.9 EWMO Communication Equipment and Warning Systems (continued)

**Continuous Air Monitor (CAM)** – CAMs are used in areas where there is a potential for airborne radioactivity. If airborne radioactivity reaches the alarm set point, the CAM will produce an audible and visual alarm warning personnel that airborne radioactivity is present thus requiring personnel not wearing respiratory protection to exit the area and follow the instructions of a supporting Radiological Control Technician (RCT).

**E-Pagers** – E-pagers are electronic devices set up to receive text messages from a variety of sources (e.g., LANL phone book, LAN line, EOSC) for the purposes of communicating general information to employees. E-Pagers are limited to 140 characters. E-pagers can also be set up to receive broadcast emergency messages from Operations Center and LANL.

**Evacuation Alarm** – The evacuation alarm provides an audible alarm that can be heard throughout the area to alert workers to evacuate to the nearest upwind Assembly Area. An evacuation alarm system is available at TA-54 Areas G, L, and the Administrative area, and an additional independent system for the RANT complex. The evacuation alarm can be activated from several locations as illustrated in Appendix 6, TA-54 Areas G and L Evacuation Alarm Button Locations, and Appendix 8, RANT Evacuation Alarm Button Locations. Any worker who determines an emergency situation that endangers all workers in the area can activate the evacuation alarm. The evacuation alarm is a local alarm, and is not connected to Central Alarm Systems (CAS). At the time of this revision TA-54 evacuation alarms in Areas G, L, and the Administrative areas are inoperable. Efforts are underway to repair the evacuation alarms.

**Fire Alarms** – Fire alarm systems and warning devices are engineered for facilities and a structure's specific needs (e.g., sprinkler head, heat sensors, and manual pull station). Fire alarms emit an audible long whooping tone that warns personnel in the immediate area to evacuate to the nearest upwind Assembly Area and the alarm transmits and signals to CAS. See Sections 6, 7, and 8 for area-specific fire system information.

**Public Address (PA) System** – PA systems are installed in the TA-54 and RANT facilities to provide a means for broadcasting audio communication to employees for abnormal/emergency events. Use of the PA for non-emergency announcements SHALL require approval from the Operations Center and the SOM.

**Two-Way Radios** – Two-way radios are another method to communicate between Assembly Areas, SOS, Operations Center, SOM/FL and EOSC. Each Assembly Area is equipped with a two-way radio.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	23 of 48

---

#### 5.9 EWMO Communication Equipment and Warning Systems (continued)

**Wind Sock** – Wind socks are strategically placed throughout LANL site to provide a visual means for employees to determine the wind direction. There are two different colors schemes. Wind socks that are solid orange are placed throughout the site in areas that are populated with workers that would require a reference point to determine wind direction. Wind socks that are orange with white strips denote the location of an Assembly Area. Wind socks are especially important when an abnormal/emergency event occurs which requires employees to quickly determine wind direction for the purposes of staying upwind from the event to prevent unnecessary exposure to potential hazardous materials.

#### 5.10 Support Personnel

Support personnel are subject matter experts (SMEs) in their field who assist the SOM/FL or IC during an abnormal/emergency event as necessary.

The following personnel groups may support the FL/IC in an abnormal/emergency event:

- Industrial Safety and Hygiene
- Radiation Protection

Additional organizations that may provide assistance are below:

- Criticality Safety Analyst\*
- Criticality Safety Officer\*
- Emergency Management
- Engineering
- Environmental
- Hazardous Waste
- Maintenance
- Nuclear Criticality Safety Division (NCSD)\*
- On-Site Transportation
- Operations Manager
- Safety Basis
- Security
- Utilities
- Waste Coordinator

\* If an abnormal/emergency event that involves a potential or real criticality safety infraction, SOM/FL or IC is required to contact NCSD to provide assistance with development of emergency actions.

#### 5.11 Emergency Access Control

During an emergency, saving life **SHALL** take precedence. Emergency personnel **SHALL** be allowed to enter the area without delay. Personnel **SHALL not** leave the incident area unless directed to do so by the IC.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	24 of 48

---

#### 5.12 Adjacent Facilities

Abnormal/emergency events have the potential to impact adjacent facilities (e.g., response vehicles, road closures). Notification to adjacent facilities will normally be accomplished by the Operations Center, SOM/FL and/or the EOSC.

#### 5.13 EWMO Abnormal Event Notification Process

The first communication is defined as Initial Notification. During an abnormal/emergency event, the initial notification from the first responder to the Operations Center and/or 911 initiates the process. The Operations Center will in turn notify the SOM.

The SOM/FL is responsible for notifying the Operations Manager who in turn will at a minimum notify the FOD, ES&H Manager, and the Project Manager.

Communications up the chain of command are required in accordance with P322-3.

#### 5.14 Recovery Plan

The recovery plan is a process to determine actions required to return the facility/area to normal operations. The Recovery Manager will develop the requirements for resuming normal operations. A graded approach to the level of formality should be applied based upon the type of emergency and hazards involved; extent of damage to facility, equipment, and environment; cause of the emergency; and actions required to prevent a re-occurrence. For an abnormal event, the SOM/FL has the authorization to return operations to normal.

If the Duty Emergency Manager has categorized the emergency as an Operational Emergency, reentry and return to normal operations will be at the discretion of the Emergency Director at the EOSC. The FOD will generally be appointed as the Recovery Manager for returning the facility to normal operations.

When an emergency is over, then the IC will declare that the emergency has ended and direct that the "All Clear" be announced.

- Only the IC may declare an emergency is over
- Each Assembly Area may be released individually
- Some Assembly Areas may be released prior to others if the hazards are localized
- Assembly Area **SHALL** be released only if the release will not endanger personnel or present problems for mitigating the situation

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	25 of 48

5.14 Recovery Plan (continued)

Each event will be evaluated independently for reentry and return to normal operation. Under no circumstances are personnel authorized to reenter the affected area in an emergency unless given the “All Clear” by the IC.

An abnormal/emergency event **SHALL not** be considered over when an alarm is silenced or acknowledged.

6. WCRRF SPECIFIC REQUIREMENTS

The WCRRF Operations Center is the access control point for entry to WCRRF Building TA-50-69 and WCRRF 50-69 yard.

Assembly Areas – The Assembly Areas are illustrated on Appendix 3, WCRRF Assembly Area Locations.

Fire Alarms - WCRRF Building TA-50-69 is equipped with automatic fire suppression and manual pull stations to notify personnel of a fire. The automatic and manual stations are connected to the Digital Alarm Communication System (DACS) which in turn will communicate the alarm with the Central Alarm Station (CAS). There is one DACS panel for Building TA-50-69: Fire Alarm Control Panel DACS 1522 (-1).

Fire alarm manual pull stations are distinctive red metal boxes mounted on walls inside Building TA-50-69. In the event of a fire or explosion, personnel should activate the manual fire alarm pull stations and call 911 and the WCRRF Operations Center at 665-2797, or the Maintenance on Call (MOC) pager 500-6965 (after hours). When an automatic or manual fire manual pull station is activated at WCRRF, the LAFD is automatically notified of the location. The WCRRF Operations Center will notify personnel of the situation using one or more of the communication systems (Public address, two-way radio, e-pagers, cell phones, and/or face to face).

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	26 of 48

---

6. **WCRRF SPECIFIC REQUIREMENTS (continued)**

Additional requirements when an abnormal or emergency event occurs:

- If wearing a respirator, do not attempt to remove the respirator until given direction by an RCT.
- If working with classified or sensitive material, and the area is established as a Temporary Limited Area, and if safe to do so, cover up the material prior to exiting the facility, and inform the Assembly Area Lead and Supervisor of the situation.
- When working in a facility/structure that is designed with a Confinement Ventilation System (e.g., TA-50-69) for the purpose of maintaining a negative differential pressure, employees **SHALL** ensure that one set of personnel airlocks remains closed upon exiting.
- If working in a radiological controlled area during an abnormal event, follow the instructions of an RCT.
- During an emergency event, all personnel who may be potentially contaminated, e.g., wearing Anti-C clothing, should not commingle with other personnel at the Assembly Area prior to being surveyed by an RCT.

7. **TA-54 SPECIFIC REQUIREMENTS**

TA-54 consists of the TA-54 Administrative Area, and Areas G, H, J, and L. RANT complex is known as TA-54 West RANT and is described in Section 8, RANT Specific Requirements.

The TA-54 Operations Center is the access point for Area G and is located at the entrance of the TA-54 Area G Controlled Area TA-54-315, Room 105. The Operations Center is staffed during day shift (0700 to 1730 hours). The Operations Center may be staffed to support after-hour activities as determined by management. The TA-54 Operations Center maintains a phone number for regular business activities at 665-2735. When notifying the TA-54 Operations Center of an abnormal/emergency event personnel **SHALL** call 665-1288. The Operations Center will ensure this phone number receives priority over all other calls.

TA-54 maintains a database of the hazardous constituents contained within the waste at TA-54 Area G. The database is accessible from the Waste Services group and the Information Management group. Emergency Planning and Preparedness maintains Building Run Sheets that contain limited information on hazardous material inventories for the FL/IC and emergency responders.

Reference	EWMO Division Building Emergency Plan (BEP)	Document No.:	EWMO-BEP-20048
		Revision:	0
		Effective Date:	8/29/2016
		Page:	27 of 48

## 7. TA-54 SPECIFIC REQUIREMENTS (continued)

The fire alarms are zoned into five areas in TA-54, which operate independently.

TABLE 2, DACS IN TA-54

Zone 1, Fire Alarm Control Panel DACS 6148(-1) (located in 54-48)	Structures 54-48, 54-229, 54-230, 54-231, 54-232, 54-289
Zone 2, Fire Alarm Control Panel DACS 6146(-1) (located in 54-412)	Structure 54-412
Zone 3, Fire Alarm Control Panel DACS 6149(-1) (located in 54-11)	Structures 54-2, 54-11, 54-33, 54-49, 54-153, 54-224, 54-273, 54-283, 54-321, 54-323, 54-375, 54-491, 54-1027, 54-1028, 54-1030, 54-1041
Zone 4, Fire Alarm Control Panel DACS 6147(-1) (located in 54-51)	Structure 54-215 (Area I), Admin. Bldgs. 54-37, 54-51, 54-60, 54-245, 54-246, 54-247
Zone 5, Fire Alarm Control Panel DACS 6144 (-1), Structure 54-38	Structure 54-38

Buildings 54-532 and 54-533 do not have fire alarms. Areas J and H do not possess automated fire alarms systems.

Additional TA-54 requirements are followed during an abnormal or emergency event:

- If wearing a respirator, do not attempt to remove the respirator until given direction by the RCT.
- The location of the safe zone may vary depending on whether the event is inside or outside the facility.
- If working in a radiological controlled area during an abnormal event, follow the instructions of an RCT.
- During an emergency event, all personnel who may be potentially contaminated, e.g., wearing Anti-C clothing, should not commingle with other personnel at the Assembly Area prior to being surveyed by a RCT.
- If working with classified or sensitive material, and the area is established as a Temporary Limited Area, and if safe to do so, cover up the material prior to exiting the facility, and/or inform the Assembly Area Lead of the situation.
- When working in a facility/structure that is designed as a contamination control enclosure (e.g., TA-54-412 Tent, TA-54-231 PermaCon, and TA-54-375 PermaCon), employees **SHALL** ensure that all doors to the contamination control enclosure remain closed upon exiting.

		Revision:	0
		Effective Date:	8/29/2016
		Page:	28 of 48

---

## 7. TA-54 SPECIFIC REQUIREMENTS (continued)

TA-54 is divided into eight response zones that correspond to locations where the fire alarm was initiated or activated (see Appendix 5). Emergency response zones were developed because of the size of the work areas at TA-54, thus allowing the worker to exit to the nearest upwind Assembly Area and to provide pertinent information to the TA-54 Operations Center for the zone in which the alarm was activated.

Area G Controlled Area	Zones I – IV
Domes	
Buildings	
Structures	
Area G Operations Center	Zone IV
Main Administrative Area	Zone V
Area L Storage Yard	Zone V
Building 54-532 and 54-533	Zone VI
Area between Area J and Building 54-533	Zone VI
Area J and Area H	Zone VII
Radioassay and Nondestructive Testing Facility (RANT)	Zone VIII

Other Alarms – TA-54 Area G maintains additional alarms (such as Tritium, O2, low flow) in certain areas that warn personnel in the immediate vicinity.

## 8. RANT SPECIFIC REQUIREMENTS

RANT is equipped with an evacuation alarm system that may be activated from several strategic locations in the RANT facility for the purpose of alerting all employees to evacuate to the nearest upwind Assembly Area (see Appendix 7, RANT Assembly Area Locations). This alarm is not connected to the CAS.

Fire Alarm System – RANT Building TA-54-38 is equipped with automatic fire suppression and manual pull stations in the event a fire develops. The automatic and manual stations are connected to Digital Alarm Communication System (DACS) which in turn will communicate the alarm with Central Alarm Station (CAS). There is one DACS panel for Building TA-54-38: Fire Alarm Control Panel DACS 6144 (-1).

		Revision:	0
		Effective Date:	8/29/2016
		Page:	29 of 48

---

## 8. RANT SPECIFIC REQUIREMENTS (continued)

Fire alarm manual pull stations are distinctive red metal boxes mounted about 4 feet above the ground on walls inside Building TA-54-38. In the event of a fire or explosion, personnel should activate the manual fire alarm pull stations and notify 911 and call either the TA-54 Operations Center at 665-1288, or the Maintenance on Call (MOC) pager 500-6965 (after hours). The TA-54 Operations Center maintains a phone number for regular business activities at extension 665-2735. When an automatic or manual pull station is activated at RANT, the LAFD is automatically notified of the location. The TA-54 Operations Center will notify personnel of the situation using one or more communication systems (e.g., Public address, two-way radio, e-pagers, cell phones, and/or face to face).

Additional RANT requirements are followed during an abnormal or emergency event:

- Workers in a facility/structure that is designed with ventilation (e.g., TA-54-38) for the purpose of personnel comfort (e.g., heating, cooling) **SHALL** ensure that exterior doors of the facility are closed upon exiting during an abnormal event.
- Alarms are considered actual unless notified by TA-54 Operations Center or Facility Lead.
- Personnel who are trained and qualified to use fire extinguishers may attempt to mitigate small incipient fires.
- If working in a radiological controlled area during an abnormal event, follow the instructions of an RCT.
- During an emergency event, all personnel who may be potentially contaminated should not commingle with other personnel at the Assembly Area prior to being surveyed by an RCT.

## 9. TRAINING

Workers will be trained to the information in this BEP as determined by analysis to be commensurate with their job, access, and duty requirements.

**APPENDIX 1**  
Page 1 of 3

**DEFINITIONS AND ACRONYMS**

**Definitions**

**Assembly Areas** – A designated rallying point away from the work area equipped with communication equipment and first aid supplies. Personnel evacuate to the upwind Assembly Areas in response to emergency situations.

**Chain of Command** – The chain of command is the formal process of establishing authority to manage an abnormal or emergency event.

**Controlled Area** – Any area to which access is controlled in order to limit access of the general public to radiation and radioactive materials. A Controlled Area is an area in which elevated radiation and/or contamination levels may exist as a consequence of routine or non-routine site operations.

**Emergency Management & Response** – A Laboratory organization tasked with directing and coordinating response actions to emergencies throughout the Laboratory.

**Emergency Management Group** – A Laboratory organization tasked with directing and coordinating response actions to emergencies throughout the Laboratory.

**Emergency Operations and Support Center** – LANL's Emergency Operations Center (EOC) runs the 24/7 Emergency Operations Support Center staffed by communications specialists and on-call emergency managers. LANL personnel can call the Center for assistance with or information about all non-life-threatening situations that involve abnormal or unusual circumstances.

**Facility Leader** – The FL is the Facility person in charge of emergency operations until transferred to the incoming IC.

**First Responder at the Awareness Level** – The first person to become aware of an abnormal/emergency event.

**APPENDIX 1**  
Page 2 of 3

**DEFINITIONS AND ACRONYMS**

**Incident Commander** – A trained and qualified emergency professional from emergency management, Centerra Los Alamos (the Laboratory's protective force), Los Alamos County Fire Department, Los Alamos County Police Department, or other federal authority having jurisdiction that takes command and control of the event.

**Shelter-in-Place** – A protective action taken by personnel to isolate themselves from a hazard.

**Spill** – An intentional or unintentional release of oil, PCBs, liquid hazardous substances, or liquid radioactive substances to the environment that is not permitted under Laboratory, state, or federal permits.

**Technical Area 54** – Technical Area 54 comprises process and administrative support areas, which includes Areas G, H, J, L, Administrative Areas, and RANT.

**Visitor** – Any individual, including Laboratory employees or subcontractors, who requires access to a facility but does not have authorized access to the specific area he/she wishes to enter.

**APPENDIX 11**  
Page 1 of 1

**ASSEMBLY AREA TWO-WAY RADIO INSTRUCTIONS**

When using an Assembly Area two-way radio, repeat-backs are required. A repeat-back consists of the receiving station repeating back the information so that the sender will know that the information has been correctly received. Routine radio traffic is monitored from Operation Centers.

- [1]     **TURN** the radio on.
- [2]     **SWITCH** the radio to appropriate Operations Center channel.
- [3]     **DEPRESS** the large button on the side of the radio to transmit.
- [4]     **ESTABLISH** communication with the Operation Center. **SPEAK** slowly and clearly.
- [5]     **IF** you do not receive an immediate response,  
          **THEN REMAIN** calm and **REPEAT** steps [3] and [4].
- [6]     **WHEN** communication is established,  
          **THEN** transmit your name and Assembly Area location  
          **AND WAIT** for the Operation Center to ask for additional information.
- [7]     **UPON** request from the Operation Center,  
          **THEN** transmit the names and condition of personnel at your Assembly Area (only relevant and essential information should be given).

Notes for TA 54 Assembly Areas

Note 1: The two-way radio for Assembly Area 1 is located in TA-54- 0242.

Note 2: The two-way radio for Assembly Area 4 is located inside building TA-54-0315.

**APPENDIX 12**  
Page 1 of 1

**ASSEMBLY AREA LEADER CHECKLIST**

**NOTE 1** *The first person to arrive at the Assembly Area during an emergency who is knowledgeable and willing to perform the duties assigned, acts as the Assembly Area Leader.*

**NOTE 2** *Instructions for using the two-way radio are provided in the Assembly Area box.*

- **DON** the blue vest located in the Assembly Area box.
- **INFORM** personnel that you are the Assembly Area Leader.
- **ENSURE** that potentially contaminated personnel are segregated.
- **RECORD** the name and Z number of all personnel on the Assembly Area Accountability Report.
- **QUESTION** all personnel about personnel accountability and if anyone is believed to be missing.
- **GATHER** information about the emergency event (such as configuration of equipment, smoke, water, medical emergencies, strange odors, etc.) from all personnel.
- **NOTIFY** the applicable Operations Center via landline, cell phone, or radio and **REPORT** the following:
  - Your name
  - Your location
  - Status of personnel (e.g., contamination, injuries)
  - Pertinent information gathered during the evacuation
  - Potentially unaccounted for personnel
  - Wind direction at the Assembly Area
- **MONITOR** the windsock for changes in wind direction.
- **ENSURE** that personnel do not re-enter buildings or work areas.
- **ENSURE** that personnel remain at the Assembly Area until the “all clear” is given.
- **TAKE** the Assembly Area Accountability Report to the applicable Operations Center.

**Contact Information:**

TA-54 Operations Center: **505-665-1288**

WCRRF Operations Center: **505-665-2797**

**APPENDIX 13**  
Page 1 of 1

**SHELTER IN PLACE INSTRUCTIONS**

## **Shelter in Place**

Sheltering is a temporary protective action and should last only a few (1–3) hours at the most.

Date: \_\_\_\_\_ Time: \_\_\_\_\_ Location: \_\_\_\_\_

Assembly Leader: \_\_\_\_\_

### **Upon Notification to Shelter in Place:**

- Assign workers to shut all windows (if any) and doors and assemble in a location away from windows and doors (hallway) for Shelter in Place (SIP).
- Turn building thermostats off to stop outside airflow into building. If airflow cannot be stopped, report to the applicable Operations Center/EM&R that airflow is not shut off.
- Isolate workers who enter from the outside at the exits inside the building.
- Do not attempt to relocate unless instructed to relocate by EM&R. (Vehicles in Area G with windows up and air movement turned off are SIP locations.)
- Conduct Assembly Area Accountability Report and report results to the applicable Operations Center/EM&R (7-6211).
- Follow up with the applicable Operations Center/EM&R every 30 minutes until the event is considered safe.
- Remain in shelter location until the applicable Operations Center/EM&R announces it is safe and the sheltering order has been given the All Clear.

### **Shelter in Place Order is All Clear:**

- Send Assembly Area Accountability Report to the applicable Operations Center or EWMO Emergency Planning Coordinator.

Document No.: EWMO-PLAN-20036

Revision: 0

Effective Date: 11/18/16

Page: 4 of 8

Reference

**1. PURPOSE**

This plan describes the process for snow removal at Environmental and Waste Management Operations (EWMO)-supported facilities to ensure that snow is safely removed from roadways, parking areas, walkways, and areas identified by the applicable Shift Operations Manager (SOM) or Person-in-Charge (PIC).

**2. SCOPE**

This plan applies to snow removal operations at EWMO-supported facilities, which include the following:

- TA-50, Waste Characterization, Reduction, and Repacking Facility (WCRRF)
- TA-46, Buildings 46-120 and 46-326
- TA-54, Radioassay and Nondestructive Testing (RANT)
- TA-54, Administrative Areas and Areas G, J, and L

The Utilities and Institutional Facilities (UI) Directorate is primarily responsible for snow removal at LANL facilities in accordance with UI-PLAN-007, Los Alamos National Laboratory Snow and Ice Control Plan. UI Roads and Grounds (R&G) crews are dispatched by the UI R&G Operations Manager when weather conditions require snow and ice removal and are responsible for plowing roadways, parking lots, fire lanes, and sidewalks at LANL facilities.

The Maintenance and Site Services (MSS)- Environmental Waste Management Facility Operations (EWMFO) group provides additional snow removal operations at EWMO-supported facilities in accordance with facility-specific work orders.

Walkways and building entrances may be cleared of snow and/or treated with deicer by EWMO facility personnel, as necessary.

**3. RESPONSIBILITIES**

**3.1 MSS-EWMO Maintenance Manager**

- Ensures that snow removal workers (e.g., teamsters and laborers) are current on all required training.
- Ensures that equipment and supplies are available.
- Ensures that equipment is inspected.

	<b>EWMO Snow Removal Plan</b>	Document No.: EWMO-PLAN-20036
		Revision: 0
		Effective Date: 11/18/16
Reference		Page: 5 of 8

---

**3.2 EWMO Operations Manager**

- Initiates this plan as necessary due to severe weather conditions.

**3.3 Shift Operations Managers (SOM)**

- Prioritizes EWMO-supported facilities for snow removal based on conditions, work priorities, and resources.
- Contacts the EWMO-supported facility PICs to initiate snow removal operations.
- Determines the activities that may be performed during snow conditions.

**3.4 Persons-in-Charge (PICs)**

- Notifies snow removal teams to initiate snow removal operations.
- Coordinates on-site snow removal operations.

**4. PRECAUTIONS AND LIMITATIONS**

Fuel and/or vehicle restrictions **SHALL** be followed during snow removal operations at WCRRF, RANT, and Area G:

- WCRRF  
(S) SAC 5.10.1.1, Vehicle Fuel Restrictions: Propane, gasoline, or diesel fueled vehicles shall not be used anywhere at the WCRRF when INVENTORY is present. Exceptions: 1) Emergency vehicles in the case of any emergency. 2) Equipment with less than 5 gal. of fuel may be used for grounds maintenance and for snow and ice removal when INVENTORY is not present in the WCRRF yard (All INVENTORY is within BUILDING TA-50-0069). 3) Transportation vehicle for the delivery of RNS WASTE CONTAINERS and pickup of TRU WASTE CONTAINERS SHALL be allowed at the WCRRF.

**EWMO Snow Removal Plan**

Document No.: EWMO-PLAN-20036

Revision: 0

Effective Date: 11/18/16

Page: 6 of 8

Reference

**4. PRECAUTIONS AND LIMITATIONS (continued)**

- **RANT**

(S) SAC 5.7.3.B, Vehicle Access Control: The outdoor CONTAINER STORAGE AREA is protected by a combination of the Building TA-54-38 location, gates and/or bollards, fencing, and restrictions on vehicles allowed in the RANT SITE. Gates and/or bollards and fencing will control vehicle access into and out of the RANT SITE and will only allow electric forklifts, TRUPACT II tractors, Transportation Safety Documents (TSD) approved vehicles, Department of Public Safety (DPS) vehicles, the diesel jockey, and the MLU crane. Exceptions: (1) Emergency vehicles in the case of any emergency; (2) Equipment with less than 5 gal. of fuel may be used for grounds maintenance and for snow and ice removal; (3) Vehicles or equipment to support non-emergency, off-normal conditions addressed in LCO 3.3.

- **Area G**

(S) SAC 5.7.6: Vehicles with a combustible/flammable liquid inventory greater than 100 gal are required to follow an escort along a designated route. Due to the increased potential for vehicular accident, the vehicle escort **SHALL** ride along inside the snow removal vehicle. The escort must still meet the requirements dictated in EP-AREAG-FO-AP-1190, Access Control for TA-54 Areas G, L, J, and H, and the driver must still travel along designated routes.

(S) LCO 3.3.1: Vehicles with greater than 100 gal of combustible/flammable liquid inventory **SHALL not** enter a Combustible Restrictive Area (CRA). Vehicles with less than or equal to 100 gal combustible/flammable liquid inventory may access a CRA in accordance with EP-AREAG-FO-AP-1097, TA-54 Area G Combustible/Flammable Liquid Control.

	<b>EWMO Snow Removal Plan</b>	Document No.: EWMO-PLAN-20036
		Revision: 0
		Effective Date: 11/18/16
Reference		Page: 7 of 8

**5. SNOW REMOVAL**

**5.1 Equipment and Supplies**

MSS-EWMFO ensures that the following equipment is available for snow removal operations at EWMO-supported facilities, as required:

- Heavy equipment
- All-Terrain Vehicles (ATVs), snow blowers, and riding tractors
- Snow shovels
- Sand and/or deicer

MSS-EWMFO SHALL inspect and maintain snow removal equipment to ensure availability during snow events.

Workers' supervisors will provide stabilicers (or equivalent non-slip ice cleats) to laborers, nuclear operators, and waste handling technicians performing snow removal (shoveling paths/clearing doors).

**5.2 Mobilization**

Snow removal operations are based on weather observations and notifications that LANL snow removal teams are being mobilized.

The MSS-EWMFO Work Execution Manager deploys snow removal teams as required, prioritizing snow removal in accordance with the SOM.

When a snow event begins during normal working hours, the EWMO Facility Operations Director (EWMO-FOD), Maintenance Manager, Operations Managers, SOMs, and PICs will assess the event and mobilize snow crews as necessary.

At TA-54 Area G, the SOM will authorize MSS-EWMFO plows to enter Area G once the TA-54 Operations Center is staffed and Radiological Control Technicians are on duty. PICs will request MSS laborers, Nuclear Operators, and Waste Handling Technicians trained in snow removal to clear snow from dome doors and other areas as directed by the SOM.

The SOM will determine what activities may be performed in snowy conditions.

		Effective Date:	11/18/16
		Page:	8 of 8

---

**5.3     Priority**

R&G crews follow a planned priority level for snow removal in accordance with UI-PLAN-007.

Snow removal priorities within each EWMO-supported facility shall be determined by the SOM depending on work priorities and resources and communicated to MSS.

1. PURPOSE

This Seasonal Facility Preservation Plan (SFPP) is used for identifying required Preventive Maintenance (PM) and Corrective Maintenance (CM) actions to ensure safe facility operations of Structures, Systems and Components (SSC) for the purpose of preventing damage resulting from cold/freezing weather, extreme weather, hot/dry weather, high winds, flooding, and wildfires to buildings, equipment, and laboratory resources maintained by Environmental and Waste Management Operations (EWMO) at Los Alamos National Laboratory (LANL). Noteworthy Practices and Observations will also be documented.

This SFPP has been developed in accordance with AP-MNT-002, *Seasonal Facility Preservation*, and supports NES-DOP-1001, *Nuclear Environmental Sites (NES) In-Service Inspections, Operations and Maintenance (O&M) Criterion 401, Freeze Protection*, AP-341-510, *Walkdown and Data Gathering*, AP-MNT-007, *Measurement, Analysis & Reporting of Maintenance Performance*, and P300, *Integrated Work Management*.

2. SCOPE

The scope of this SFPP is seasonal and should be reviewed and revised biannually (i.e., prior to the winter season and prior to the summer season), or on an as-needed basis.

The scope of this SFPP ensures the actions and requirements imposed to provide cold/freezing weather, extreme hot/dry weather, high winds, flooding, and wildfires protection, comply with the facility configuration management procedures and are reviewed by facility operations and safety personnel to ensure the facility is maintained in a safe condition protecting the health and safety of the public.

Nuclear facilities managed by EWMO under this SFPP include the Waste Characterization, Reduction, and Repackaging Facility (WCRRF), Technical Area (TA) 54 Area G, Radioassay and Nondestructive Testing (RANT) facility, and Nuclear Environmental Sites (NES).

Notably, the NES' do not have building structures that require specific action to protect against winterization/freeze protection, lightning, extreme weather, hot/dry weather, or defensible space. Each NES has an Inventory Isolation System (IIS) consisting of overburden, which is a Safety-Significant (SS) Design Feature (DF) that protects the buried waste inventory from accidents (i.e., external forces such as natural phenomena or inadvertent intrusions). As an SS DF, the IIS has an associated In-Service Inspection (ISI) requirement that ensures degradation, damage, and other issues do not prevent the IIS from performing its safety function.

Performance of NES-DOP-1001 fulfills the requirements of AP-MNT-002 to the extent it can be applied to the NES. As a result, no record is generated from this SFPP for the NES.

### 3. DEFINITIONS, ACRONYMS AND ABBREVIATIONS

#### 3.1 Definitions

<b>Checklists:</b>	Attachments A – H [Use Each Time (UET)]
<b>Deficiency:</b>	Checklist item that does <u>not</u> meet the established requirements for acceptance and/or is unacceptable (UNSAT), requiring further action.
<b>Facility:</b>	A building, an area within a building, or a group of buildings that are under the responsibility of a facility manager.
<b>Satisfactory (SAT):</b>	Used in checklist determination (S) to indicate that the inspection meets established requirements and/or is acceptable.
<b>Unsatisfactory (UNSAT):</b>	Used in checklist determination (U) to indicate that inspection resulted in a finding and therefore does <u>not</u> meet established requirements and/or is unacceptable (i.e., deficiency).
<b>Weather Stations (WS):</b> (aka.... Weather Machine)	Using the “Weather Machine” link ( <a href="http://weather.lanl.gov">weather.lanl.gov</a> ) click on the TA-54 (primary) and/or TA-53 (backup) WS, which are the approved source-base for compiling temperature readings (°F), both current and projected forecasts facilitating SFPP actions.

**4. RESPONSIBILITIES**

**4.1 Maintenance Manager (MM)**

- Ensures development and implementation of SFPP at EWMO supported facilities.
- Ensures personnel are briefed on SFPP implementation/use.
- Ensures personnel receive email notifications of SFPP roles and responsibilities.
- Schedules revisions and reviews of SFPP (i.e., winter, summer, or as-needed).
- Evaluates adverse trends and implement SFPP corrective actions.
- Approves checklists (i.e., Attachments) and submits to Records Management per EP-DIR-AP-10003, *Records Management Procedure for ADEP Employees*.
- Ensures new and pre-existing seasonal preservation CM and PM are completed by required dates.

**4.2 System Engineer (SE)**

- Uses seasonal preservation plan considerations from AP-341-510, *Walkdown and Data Gathering*, Section 3.1 as a walkdown aide.
- Performs walkdowns of SSCs for seasonal preservation needs, providing feedback to the MM.
- Document walkdown(s) results and provide to MM for SFPP development.
- Identifies Vital Safety Systems (VSS) supporting seasonal preservation actions (e.g., SC, SSCs etc.).
- Reviews Work Orders (WOs), work requests, and issues related for seasonal preservation needs, which should include open items and previously corrected deficiencies.
- Evaluates new and in-process projects to identify seasonal preservation issues.
- Supports Work Control Planners with the planning of PM and CM WOs needed to support seasonal facility preservation.
- Verifies acceptable results for post-modification/maintenance testing, as required.

**4.3 Maintenance Coordinator (MC)**

- Implements SFPP for assigned buildings.
- Develops CM WOs supporting the SFPP.
- Notifies MM and PM Coordinator on seasonal preservation PMs for equipment requiring additional seasonal protection, as identified by SEs.
- Ensures WOs are properly coded against equipment numbers.
- Reports seasonal protection deficiencies to MM.
- Signs/dates seasonal checklists including applicable CM and/or PM closeouts, and submits to MM for signatures/concurrence.
- Obtains 5-day weather forecast at the LANL "Weather Machine" ([weather.lanl.gov](http://weather.lanl.gov)) at the start of the weekly shift. Review the forecast, paying particular attention to forecasted low temperatures, wind speeds, and possibility of rain/snow.

**Seasonal Facility Preservation Plan**

Document No.: EM-PLAN-20191

Revision: 0

Effective Date: 09/22/2016

Page: 7 of 49

Reference

---

**4.3 Maintenance Coordinator (continued)**

- Obtains Fire Danger rating from “Inside Los Alamos National Laboratory” website (int.lanl.gov) at the start of the weekly shift. Evaluate weather forecasts and Fire Danger Rating and provide a determination for the week to the Maintenance Point of Contact.
- Notifies MM and initiates response to any increased threats (e.g., cold/freezing, extreme weather, heat, fire, high winds, etc.).
- Trends issues derived from reviews and walkdowns per AP-MNT-007, *Measurement, Analysis & Reporting of Maintenance Performance*, and forwards adverse trends to the EWMO Facility Operations Director (FOD-5) and MM for corrective actions.
- Initiates tenant email notifications (e.g., LANL approved items, seasonal observations for equipment, etc.).

**4.4 Maintenance POC and On-Call POC (after hours)**

- Responds to off-normal conditions related to seasonal issues in facilities.
- Addresses after hour’s conditions related to seasonal issues in facilities.
- Maintains up-to-date On-Call list with contact information (list provided by FOD).

**4.5 Qualified Inspectors**

- Performs annual facility checklists / inspections in support of this SFPP. Initials and dates for completed areas, as inspections progress.
- Performs Winter Preparation Checklist (Attachment B) deficiencies by October 1<sup>st</sup>.
- Performs daily cold weather checklists/inspections when the actual low temperature is  $\leq 35^{\circ}\text{F}$  as listed at WS TA-54 or backup WS TA-53. Initial and date for completed areas as inspections progress.
- Sign and date seasonal checklists upon completion of inspections and provide to MC or MM, as required by checklist.
- Records SFPP deficiencies using checklists, and delivers to MC.

**4.6 Work Provider**

- Performs seasonal preservation work in accordance with P300, *Integrated Work Management*.

5. SEASONAL FACILITY PRESERVATION REQUIREMENTS

At a minimum every Maintenance Coordinator (MC) or qualified inspector shall ensure the Maintenance Requirements in Section 6.2 of the Operations and Maintenance (O&M) Criterion 401, *Freeze Protection*, and requirements listed in Section 5 of this SFPP are followed for facilities within their areas of responsibility.

Additional requirements for specific facilities are provided in Attachments B through G.

Inspections and self-assessments of cold/freezing weather, extreme weather, hot/dry weather, high winds, flooding, lightning and wildfires protection programs are to be appropriately scheduled to ensure correction of deficiencies and preparation of other compensatory measures prior to the beginning of each seasonal weather condition.

Due to the difficulty of predicting high winds, flooding and lightning, these noted requirements will have to be scheduled when conditions apply.

**Weather Stations (WS):** When validating and/or performing SFPP actions, use approved WS (see Section 3.1, *Definitions*).

**Checklists:** Attachments A – G (see §6, *Records*) shall be completed using a graded approach, and by entering S (SAT) or U (UNSAT), as applicable (see §3.1, *Definitions*).

No log or checklist included in this SFPP will be signed as completed until all deficiencies are sufficiently addressed, and corrected to the satisfaction of this SFPP.

**Scheduling:** Inspections and self-assessments of cold/freezing weather, extreme weather, hot/dry weather, high winds, flooding, lightning and wildfires protection programs shall be appropriately scheduled to ensure correction of deficiencies and preparation of other compensatory measures to protect the facilities prior to the beginning of each seasonal weather condition.

**Deficiencies:** All deficiencies identified during the performance of this SFPP will be recorded (summarized) using Attachment A, *Deficiency Log*. See Section 3.1, *Definitions*.

All deficiencies identified will be reported to the Operations Manager and MM.

If deficiency can be immediately resolved, then a description of actions performed will be included in the resolution field of Attachment A, which should indicate deficiency is fixed.

Deficiency that cannot be immediately resolved will be recorded in Attachment A. The proposed resolution will be identified by a brief description and will reference the applicable Footprints issue number, Work Order (WO) number, Facility Service Request (FSR), Non-Conformance Reporting (NCR) or any other official method for issue tracking used. All identified deficiencies will be prioritized, corrected as required, and tracked to closure.

Deficiency closeout date will be recorded when all corrective actions have been completed.

**SFPP Requisites:** Ensure §5.1 is addressed prior to performing any inspections.

The following documents are required reading in the performance of this SFPP.

- O&M Criterion 401, *Freeze Protection*
- AP-MNT-002, *Integrated Facility Management Program – Seasonal Facility Preservation*

Seasonal Facility Preservation Plan

Document No.: EM-PLAN-20191

Revision: 0

Effective Date: 09/22/2016

Page: 9 of 49

Reference

---

5.1 Planning and Coordination

- Ensure inspection and self-assessment activities are appropriately scheduled.
- Ensure the current revision of this SFPP is available for use in EDMS.
- Ensure a Radiological Work Permit (RWP) has been issued and inspectors have been briefed.
- Ensure plan-specific equipment detailed in Attachment H, *Plan Specific Equipment Listing* is available for use in completion of Attachments B through G.

5.2 Winter Weather Considerations

( $\leq 35^{\circ}\text{F}$  as listed at WS TA-54 or backup WS TA-53)

**NOTE** See Attachments B and C for facility specific winter and cold weather responsibilities.

- Ensure work orders are properly coded against equipment numbers to facilitate subsequent restoration planning.
- Ensure checklists are completed as follows:
  - Attachment B, *EWMO Winter Preparation Checklist*: Review and perform actions by October 1<sup>st</sup> of each year.
  - Attachment C, *EWMO Cold Weather Daily Checklist*: To be completed each day the actual low temperature is  $\leq 35^{\circ}\text{F}$  as listed at TA-54 WS.
  - Attachments B and C checklists have been reviewed for completeness, and signed by both the MM and FOD.
- Ensure CM Work Orders and mitigating actions required for cold weather are executed and completed prior to October 1<sup>st</sup>.
- Ensure air intakes, windows, doors, and other access ways that could provide abnormal inflows of cold air are secured.
- Ensure a general inspection is performed on wet pipe sprinklers, visually inspect ceiling tiles for water damage, and investigate potential water leaks.
- Storage Area considerations:
  - Outside storage pads and unheated storage areas are inspected to verify there are no materials susceptible to freeze damage.
  - Materials susceptible to freeze damage needs to be moved to heated areas.
  - Contact appropriate personnel to relocate subject equipment or materials.
  - MC / MM notified if work orders are necessary.
- Heating System(s) considerations:
  - Heating systems PMs are completed, deficiencies verified, and the MC / MM notified if work orders are necessary.
  - Ensure facility boiler inspections and PMs are completed prior to cold weather. Verify deficiencies, and notify the MC to initiate a work order for repairs.
  - Ensure heating system(s) power is on and the heating system(s) has been turned on and properly functioning.

Effective Date: 09/22/2016

Page: 10 of 49

Reference

---

5.2 Winter Weather Considerations (continued)

- Ensure areas requiring portable heating units are obtain through the MM.
- Ensure portable auxiliary heaters for emergency / unplanned use have been inspected, tested, and staged. Identified sources to obtain more have been documented, if needed.
- Ensure personnel are trained in the use of portable heaters.
- Ensure main water supply cutoffs for each facility are identified, tested, and readily accessible to emergency personnel responding to a freeze/thaw incident.
- Ensure employees identify and report any suspected problem with heating or other cold weather protection equipment (e.g., un-insulated piping, inoperable/isolated steam tracing, electrical trace heaters inoperable or turned off, broken windows, or holes in exterior walls).
- Ensure heat sources (e.g., heat tape, portable heaters) are installed in areas susceptible to freezing.
- Fire Suppression System considerations:
  - Ensure conditions in fire protection sprinkler equipment rooms are monitored, maintaining a temperature above 40°F.
  - Ensure Drum Drip PMs in TA-54-0033, -0215, -0230, -0231, -0375 and -0412 have been verified, and completed as scheduled.
  - Inspect dry-pipe sprinkler systems requiring proper air pressure check.
- Snow and Ice Removal considerations:
  - Ensure roof drains, scuppers, canals, gutters and downspouts are free from obstruction.
  - Address snow and ice buildup at each entrance and exit door (e.g., overhanging ice, roofs, doorways, water on floor).
  - Remove obstructions that can hinder snowplow operations (e.g., lumber, barrels, etc.).
  - Identify locations of sand barrels filled with dry sand or snowmelt for applying to walkways.
- Hazardous Material Considerations:
  - Unheated process lines shall be drained and purged to prevent spills (line breakage) due to freezing temperatures during non-production periods.
  - Ensure piping and valves (e.g., check valves and dump valves) are properly insulated.

**NOTE**     *The minimum maintenance requirements in §6.2 of the O&M Criterion 401 are addressed under the facility's Computerized Maintenance Management System program.*

5.3 Cold Weather Considerations

(≤ 35°F as listed at WS TA-54 or backup WS TA-53)

**NOTE**     *See Attachment C, Cold Weather Daily Checklist for facility-specific responsibilities.*

- Prior to cold weather, verify the electrical wall heating units in fire riser rooms and bathrooms are turned on.

Seasonal Facility Preservation Plan

Document No.: EM-PLAN-20191

Revision: 0

Effective Date: 09/22/2016

Page: 11 of 49

Reference

---

**5.3 Cold Weather Considerations (continued)**

- Perform walkdowns of components inside heated buildings that are located in isolated/out of the way areas, such as attics, closets and close to exterior walls.
- Maintain extra heating for systems susceptible to freezing, particularly around fire sprinkler piping.
- Identify location of sand barrels filled with dry sand or snowmelt for exterior walkways.
- Ensure personnel have been briefed in the safe use of portable heaters.
- Inspect, test, and stage portable auxiliary heaters.
- Maintain extra heat for sprinkler piping particularly at night.
- Monitor infrequently visited areas and spaces where sprinkler piping is located to ensure drafts or air leaks are minimized.
- Maintain call-in list(s) for maintenance personnel.
- Maintain a small water flow to sink faucets when water lines are susceptible to freezing.
- Ensure adequate cold weather clothing, tools, and equipment is available during inspections for FOD-5 facilities. Contact the MM for approval.

**5.4 Extreme Weather Considerations**

( $\leq 5^{\circ}\text{F}$  as listed at WS TA-54 or backup WS TA-53)

**NOTE** Use Attachment C to incorporate the following actions, when applicable ( $\leq 5^{\circ}\text{F}$ ).

- Increase inspection frequency to twice daily on work days, and once daily on non-work days.
- Inspectors shall draw a line in the boxes provided on the attachment to allow initials for two inspections daily, as needed.
- Sand/ice remover shall be staged in high traffic areas.
- Additional heating capacity shall be provided to systems vulnerable to freeze damage. Consult System Engineering to assist in identifying systems requiring additional heating.
- Ventilation intakes shall be kept clear of snow and ice buildup.

**5.5 Summer Weather Considerations**

**NOTE** See Attachment D, Summer Preparation Checklist for facility-specific responsibilities.

- Ensure cooling systems are cleaned, serviced, and functionally tested.
- Ensure storage locations for materials susceptible to evaporation and possible explosion due to direct sunlight or extreme heat are evaluated.
- Coordinate with Operations Management:
  - The safe shutdown of equipment vulnerable to extreme hot/dry weather.
  - Possible restriction of certain activities due to extreme heat/humidity.

Seasonal Facility Preservation Plan

Document No.: EM-PLAN-20191

Revision: 0

Effective Date: 09/22/2016

Page: 12 of 49

Reference

---

**5.6 Wildfire Prevention Considerations**

Requirements for wildfires only apply when a wildfire is burning.

**NOTE** See Attachment E, *EWMO Wildfire Prevention Annual Checklist* for facility-specific responsibilities.

- Where appropriate, secure HVAC and other vulnerable equipment systems to isolate SSCs from soot and smoke damage.
- Ensure safe shutdown of vulnerable equipment.
- Evacuate Laboratory and local areas as appropriate.
- Construct/increase firebreaks around the facility.
- Conduct combustible loading and weed/vegetation control inspections.
- Restrict operations that involve heat (i.e., welding, burning, sparks, etc.).
- Restrict fire hazards (i.e., smoking, etc.).
- Ample supplies of portable fire extinguishers are available.
- All exits are kept clear.

**5.7 Flooding Considerations**

Attachment F, *EWMO Flooding Annual Checklist* is to be completed annually, prior to June 1.

**NOTE** See Attachment F, *EWMO Flooding Annual Checklist* for facility-specific responsibilities.

- Storm drains and other drainage paths are free from obstructions.
- Doors and windows are closed.
- Water-vulnerable items are raised above the expected water line.
- Sandbags and dikes used where necessary.
- Vehicles moved to higher ground.

**5.8 High Wind Considerations**

(Sustained wind speeds >25 mph at WS TA-54 or backup WS TA-53)

**NOTE 1** See Attachment G, *EWMO High Winds Annual Checklist* for facility-specific responsibilities.

**NOTE 2** The limit of 25 mph is derived from DOE-STD-1090-2004, *Hoisting and Rigging*, which sets this limit for unrestricted operation of mobile cranes. Operations throughout EWMO-supported facilities periodically require cranes and/or forklifts; therefore, this value was determined to be the operational limit for such activities.

- Safe shutdown of vulnerable equipment.
- Emergency evacuation and sheltering policies.
- Identifying emergency evacuation routes and ensuring that personnel are familiar with them.
- Securing outside materials susceptible to becoming missiles. Pay particular attention to job sites, staging and laydown areas.

6. RECORDS

Records generated in the course of performing this Plan must be maintained in accordance with the LANL Records Retention Schedule. When the records are ready for final disposition, the records are transferred to Records Management in accordance with EP-DIR-AP-10003, *Records Managements*.

**EWMO WINTER PREPARATION CHECKLIST**

- Deficiencies (UNSAT) identified during the performance of this procedure that cannot be corrected immediately will be recorded in Attachment A.
- Proposed resolution for correction of deficiency will be identified by a brief description in Attachment A, and will reference the applicable Footprints issue number, Work Order number, or any other official method for issue tracking used.
- All identified deficiencies will be prioritized, corrected as required, and tracked to closure.

#	Description	SAT / UNSAT	Initials	Date
<b>TA-46, Buildings 0120 and 0326</b>				
1	<b>Perform general inspection of the building, being observant of the following:</b>			
	• Potential sources of cold outside air, such as windows, louvers, etc.			
	• Potential dead legs in water (and/or any liquid) circulation systems that would be at an increased susceptibility to freezing.			
	• Low, shady areas where water could potentially build up and represent an ice hazard.			
	• Exterior door latches, automatic closure mechanisms, and weather stripping.			
	• Identify main building water supply cutoff, and remove any obstructions.			
2	<b>Heating systems will be cleaned, serviced, and functionally tested.</b>			
	• Heating system is energized and thermostats are set between 68°F and 72°F.			
	• Perform operational check of all radiant space heaters.			
3	<b>Tenants shall receive notification via email of the following:</b>			
	• Portable heaters represent a potential fire hazard to the building. Only approved, LANL authorized portable heaters are to be used. Furthermore, portable heaters represent a significant electrical load to the building and their use should be approved by appropriate EWMO personnel prior to operation.			
	• All window A/C units are to remain secured and diligently observed for cold air intake. If cold air is noticed to be abundantly flowing through any unit, instruct tenants to notify facility personnel immediately.			
	• Any hazards associated with winter (e.g., icy conditions, abundance of snow, cold air sources, heating problems, etc.) should be immediately reported to the on-call Maintenance POC.			
4	<b>Fire Suppression Considerations:</b>			
	• Check restrooms for adequate heat, open lavatory faucets, & flush toilets			
	• TA-46-0326: Check Fire Riser room for leaks.			
	• TA-46-0326: Inspect ceiling sprinkler heads and ceiling tiles for potential water leaks.

<b>TA-54, Buildings 0039, Area L</b>				
1	<b>Perform general inspection of the building, being observant of the following:</b>			
	• Potential sources of cold outside air, such as doors, windows, louvers, etc.			
	• Low, shady areas where water could potentially build up and represent an ice hazard.			
	• Exterior door latches, automatic closure mechanisms, and weather stripping.			
	• Any hazards associated with winter, such as icy conditions, abundance of snow, cold air sources, heating problems, etc., should be immediately reported to EWMO personnel.			
	• Identify main building water supply cutoff, and remove any obstructions.			
	• Inspect outside storage pads and unheated storage areas for items/materials vulnerable to freeze damage.			
2	<b>Heating systems will be cleaned, serviced, and functionally tested.</b>			
	• Perform operational check of all radiant space heaters.			
	• Energize heat-trace insulated piping (for TA-54-0039 only).			
	• Check the restroom for adequate heat, open the lavatory faucets, and flush the toilet (for TA-54-0039 only).			
<b>TA-54, Building 0215, Area L</b>				
1	<b>Perform an inspection of the following:</b>			
	• Ensure radiant heater in Fire Riser Room is working properly.

<b>TA-54, Buildings 0002, 0011, 0367, Area G</b>				
1	Perform general inspection of the building, being observant of the following:			
	• Potential sources of cold outside air, such as doors, windows, louvers, etc.			
	• Potential dead legs in water (and/or any liquid) circulation systems that would be at an increased susceptibility to freezing.			
	• Low, shady areas where water could potentially build up and represent an ice hazard.			
	• Exterior door latches, automatic closure mechanisms, and weather stripping.			
	• Any hazards associated with winter, such as icy conditions, abundance of snow, cold air sources, heating problems, etc., should be immediately reported to EWMO personnel.			
	• Identify main building water supply cutoff, and remove any obstructions except those clearly placed to prevent tampering.			
	• Inspect outside storage pads and unheated storage areas for items/materials vulnerable to freeze damage.			
2	Heating systems will be cleaned, serviced, and functionally tested.			
	• Perform operational check of all radiant space heaters.			
	• TA-54-0011 - Check restrooms, open lavatory faucets, and flush toilets.			
	• TA-54-0367 - Check restrooms, open lavatory faucets, and flush toilets.			
	• TA-54-0002 - Check water line manifold on the west side.

**EWMO COLD WEATHER DAILY CHECKLIST**

**NOTE** See Section 5.5 for Extreme Weather Considerations ( $\leq 5^{\circ}\text{F}$ ), which if applied, will augment cold weather checklist requirements (i.e., Attachment C).

**Freeze Protection Inspection:** The checklists below support freeze protection requirements as follows:

- To be performed on a daily basis while operations are being performed at EWMO-supported facilities.
- To be performed at least 3 times per week during winter break.

**General Inspection:** For buildings listed in the table below, ensure the following tasks are performed:

- Inspect structures for potential sources of cold outside air, such as doors, windows, louvers, exterior door latches, automatic closure mechanisms and weather stripping.
- Inspect outside storage pads and unheated areas. Remove all items/materials vulnerable to freeze damage. Any hazards associated with winter, such as icy conditions, abundance of snow, cold air sources, heating problems, etc., should be immediately reported to FOD-5 personnel.
- Ensure the nitrogen supply associated with applicable Fire Suppression Systems (FSS) will be inspected for the following six buildings:
  - (S) TA-54-0038 (RANT) – nitrogen pressure  $\geq 500$  psig (RANT AC 5.6.5, *Fire Protection Program*)<sup>1</sup>
  - TA-54-0033 – nitrogen pressure  $\geq 500$  psig
  - TA-54-0230 – nitrogen pressure  $\geq 500$  psig
  - TA-54-0231 – nitrogen pressure  $\geq 500$  psig
  - TA-54-0412 – nitrogen pressure  $\geq 500$  psig
  - TA-54-0557 – nitrogen pressure  $\geq 500$  psig
- If FSS nitrogen pressure is  $< 500$  psig, notify the MC / SOM and request nitrogen bottle be replaced.

**Cold Weather Considerations ( $\leq 35^{\circ}\text{F}$ ):** When WS TA-54 or backup WS TA-53 WS at the LANL “Weather Machine” ([weather.lanl.gov](http://weather.lanl.gov)) reads  $\leq 35^{\circ}\text{F}$  for the daily low temperature, perform the following for the locations listed in the table below:

**NOTE** It's recommended the MC review the LANL “Weather Machine” ([weather.lanl.gov](http://weather.lanl.gov)) weather forecast.

- Perform a 5-day forecast; if the prediction is low temperatures of  $\leq 35^{\circ}\text{F}$  at any point across the 5-day forecast, the MC shall notify the on-call Maintenance POC and inspectors of a cold weather threat.
- Attachment C, page 6 of 6 is to be completed for TA checklist(s). See instructions on page 6 of 6.

---

**PLAN SPECIFIC EQUIPMENT LISTING**

- Ensure plan-specific equipment detailed in this attachment is available for use in completion of Attachments B through G.

EQUIPMENT ID	LOCATION	DESCRIPTION
<b>Winter / Cold Weather Equipment (Attachments B &amp; C)</b>		
Sand/Ice Remover	See Attachment C	Distributed to high traffic areas by the Site Support Service provider.
Boilers (BHW-001 and BHW-002)	(2 ea.) TA-50-0069, OSN	Boilers provide facility heating individually to WCRRF. Maintain per PMI 403-A.
Heaters (HVA-1000 and HVA-2000)	TA-54 Area G Dome 54-0231	Provide heating to the Dome 231 PermaCon and shall be maintained per PMI 408-A.
Heaters (HVA-001, HVA-002, HVA-003)	TA-54 Area G Dome 54-0375	Provide heating to the Dome 375 PermaCon. Maintained per PMI 408-A.
Portable Space Heaters	All EWMO-supported facilities	Deployed to isolated areas & systems identified as vulnerable to freezing. Also used for additional heating during extreme cold periods. Maintained by EWMO Maintenance.
Fluke Precision Digital Infrared Thermometers	Fire riser rooms at EWMO-supported facilities	Instrument used to record daily cold weather temperatures in EWMO-supported building fire riser rooms (as listed in Attachment C).
<b>Summer Weather Equipment (Attachment D)</b>		
Air Conditioning Units	All EWMO-supported facilities	All facility air conditioning units shall be cleaned, serviced, and functionally tested per PMI 408-A, annually.
Window-Mounted Air Conditioning Units	All EWMO-supported facilities	All window-mounted air conditioning units shall be functionally tested annually. Any issues shall be reported to the appropriate MC.
Smoking Waste Receptacles	All EWMO-supported facilities	Smoking specific waste receptacles shall be staged in designated smoking areas.
Dust Control Measures (Water Truck)	TA-54 Area G	Dust control equipment (water truck) shall be maintained and kept available for immediate use upon the observation of blowing dust.
<b>Wildfire Prevention Equipment (Attachment E)</b>		
Fire Protection Water Hydrant Systems	All EWMO-supported facilities	Hydrants in close proximity to EWMO structures. Ownership/PM by LANL Utilities.
<b>Flooding Equipment (Attachment F)</b>		
Gutters/Storm Drains	All EWMO-supported facilities	All gutters and storm drains shall be cleared of debris annually.
Silt Fences/Berms	TA-54, Area G	All silt fences and earthen berms shall be inspected and repaired annually.
<b>High Wind Equipment (Attachment G)</b>		
Water Truck (Dust Control Measures)	TA-54, Area G	Used for dust control. Available for immediate use upon the observation of blowing dust.

## Procedure

Los Alamos National Laboratory

**No: P409**

Revision: 5

Issued: 07/30/15

Effective Date: 07/30/15

## LANL Waste Management

### 1.0 PURPOSE

This document describes Los Alamos National Laboratory (LANL or the Laboratory) requirements for waste generated and managed by Waste Generators and Treatment Storage Facilities (TSFs) to ensure compliance with legal mandates and Laboratory requirements as necessary to protect human health, safety, and the environment. This document has been revised as part of a process in which the Laboratory systematically plans, documents, executes, and evaluates its management of regulated waste streams.

This document addresses LANL's waste management requirements for Waste Generators and TSFs as necessary to safely manage, store, and treat wastes. The Waste Generator must know and document what is in the waste, and TSFs must meet waste analysis requirements under the [LANL Hazardous Waste Facility Permit](#). This document also addresses LANL's Waste Certification and Self-Assessment Programs, to ensure there is a systematic, documented approach for compliance with requirements in this document.

All Waste Generators, including subcontractors, who generate a regulated waste, must work with Waste Management (WM) to meet the requirements in this and other required documents to ensure that the following are met:

- the waste is properly characterized, managed, stored, and transported, and
- the waste certification program is implemented at the waste generating site before the waste is shipped off-site from LANL.

The Environmental Protection Agency (EPA) and the New Mexico Environment Department (NMED) have established requirements, which are addressed in this document, for Waste Generators and TSFs to ensure regulated waste is characterized, managed, stored, treated, and transported compliantly. To ensure compliance with legal mandates, the requirements in this and other requirements documents (i.e., [P930-1](#), *LANL Waste Acceptance Criteria*, Associate Director for Environment, Safety, and Health [ADESH], and Functional Series Documents [FSDs]) are established to be consistent with Department of Energy (DOE) Orders, federal and state laws and regulations, the [LANL Hazardous Waste Facility Permit](#), and reporting requirements.

## **2.0 AUTHORITY AND APPLICABILITY**

### **2.1 Authority**

This document is issued under the authority of the Laboratory Director to direct the management and operation of the Laboratory, as delegated to ADESH as provided in the [Prime Contract](#). This document derives from the Laboratory [Governing Policies](#), particularly the section on Environment, and implements requirements in the [Prime Contract](#), particularly Department of Energy Acquisition Regulation (DEAR) 970.5223-1, *Integration of Environment, Safety, and Health into Work Planning and Execution* (Dec. 2000); Part III, Section J, Appendix B 4.2 and Part III, Section J, Appendix G; [DOE Order \(O\) 435.1](#), *Radioactive Waste Management*; [DOE Manual \(M\) 435.1-1](#), *Radioactive Waste Management Manual*; the [Resource Conservation and Recovery Act \(RCRA\)](#); the [Toxic Substances Control Act \(TSCA\)](#); [New Mexico Special Waste Act](#); [74-9-1 NMSA 1978](#), *Solid Waste Act*, and the [74-4-1 NMSA 1978](#), *Hazardous Waste Act*.

- Issuing Authority (IA): Associate Director for Environment, Safety, and Health (ADESH)
- Responsible Manager (RM): Waste Management (WM) Division Leader
- Responsible Office (RO): Waste Management-Division Office (WM-DO)

### **2.2 Applicability**

This document applies to all workers, including subcontractors, who generate, manage, treat, or store regulated waste at the Laboratory as a Waste Generator or at a TSF. Regulated waste, as used in this document, refers to all types of waste including office waste, solid waste, universal waste, hazardous waste, mixed radioactive waste, and radioactive-only waste. Waste Generators include workers who generate regulated waste and store the waste in staging areas, accumulation areas, or less-than 90 day storage areas. TSFs include workers who manage, treat, or store regulated waste under the [LANL Hazardous Waste Facility Permit](#). All other persons working at the Laboratory must follow the requirements as set forth in their contractual agreements or subcontracts.

## **3.0 PROCEDURE DESCRIPTION**

### **3.1 Overview**

There are two main aspects to this document. First, it establishes specific responsibilities for Waste Generators and TSFs to manage and store regulated wastes to ensure the protection of human health, safety, and the environment (Sections 3.2 through 3.7). Second, it describes LANL's Waste Certification Program, which requires a documented approach to ensure that waste management (treatment, storage and disposal) of waste streams complies with applicable requirements (Section 3.8) prior to off-site shipment.

**Fig. 1. LANL Waste Management Components**

Waste Generators and TSF workers will find more detailed information on waste compliance in the ADESH FSDs. These FSDs may consist of non-mandatory information, such as aids and guidance (ADESH-TOOLS) or mandatory requirements, regarding waste type and compliance factors. These FSDs are issued by ADESH in accordance with [PD311, Requirements System and Hierarchy](#) and [ADESH-AP-007, Document Control](#).

If a Facility Operations Director (FOD), the Facility Responsible Line Manager (RLM), a Facility Point of Contact and/or a Waste Generator chooses to specify additional local-level procedures for waste management activities, those local procedures and changes thereto must be reviewed and approved through WM-DO before they are issued and implemented. Such procedures, including ADESH Administrative Procedures (ADESH-APs) and ADESH Technical Procedures (ADESH-TPs), may be subject to review in accordance with Safety Basis Procedure (SBP) [SBP-112-3-R1.2, Unreviewed Safety Question \(USQ\) Process](#), and [P315, Conduct of Operations Manual](#). WM-DO confirms that Waste Generators are compliant with potential waste streams through oversight requirements for their waste streams and that waste requirements are met in the planning stage for all waste and potential waste streams.

Before waste generating projects (remediation, Demolition and Decontamination, Footprint Reduction, etc.) begin, WM-DO must review (1) all characterization methodologies that were part of the planning stage and the preparation for waste disposition and (2) all requests for use of a DOE or LANL subcontractor that was not procured through [WM-DO](#) via e-mail.

Before generating regulated waste or commencing waste characterization activities, a Waste Generator must consult with their [Waste Management Coordinator \(WMC\)](#). TSFs must comply with their local-level procedures and the [LANL Hazardous Waste Facility Permit](#).

Waste Generators and TSFs must also meet the requirements of the LANL Pollution Prevention Program, which implements pollution minimization goals through Pollution Prevention Opportunity Assessments and other tools. The LANL Pollution Prevention Program requires Waste Generators and TSFs to identify potential alternatives to the generation of waste including use of less toxic materials, alternative processes, waste minimization techniques, and following the requirements [DOE O/M 435.1, Radioactive Waste Management/Manual](#) and [DOE O 436.1, Departmental Sustainability](#). In addition, TSFs must meet waste minimization requirements of the [LANL Hazardous Waste Facility Permit](#).

The Waste Certification Official (WCO) must be notified by the originating organization when a Nonconformance Report (NCR) or a Performance Feedback and Improvement Tracking System (PFITS) issue is entered into the system regarding regulated waste. WCO concurrence for corrective actions must be obtained by e-mail prior to closure.

### 3.2 Identifying Waste

Waste Generators must correctly identify their waste through waste characterization as specified below. If a Waste Generator needs assistance with and/or cannot identify the waste type, the worker must contact their WMC. In addition, if a LANL worker or subcontractor discovers a waste stream with no identifiable Waste Generator, the worker must contact their WMC. See [ADESH-TOOL-213, No Owner Waste](#).

"Office waste" refers to wastes generated in an office environment and can include solid waste (e.g., office paper, food waste, trash), recyclables (e.g., paper, cardboard, plastics), universal waste (e.g., batteries and fluorescent light bulbs) and hazardous waste (e.g., aerosol cans). [ADESH-TOOL-114, Office Waste Tool](#), [ADESH-TOOL-111, Waste Characterization](#), and [ADESH-TOOL-314, Radioactive Characterization](#), help Waste Generators quickly identify their regulated waste types and describe additional tools with requirements for their regulated waste types.

Project Management (PM) projects, Environmental Remediation (ER) or decontaminated and decommissioned must notify WM-DO via e-mail of upcoming waste generation projects and provide all pertinent planning documentation and characterization documentation for evaluation. Use of the Permits and Requirements Identification (PRID) system is required (see [PD400, Environmental Protection](#)).

#### 3.2.1 Waste Characterization

Waste Generators and TSFs are required to ensure that waste characterization is accurate, complete and up-to-date. Waste Generators must make a waste determination and characterize regulated waste by appropriate analytical testing or use of acceptable knowledge e.g., Material Safety Data Sheets (MSDSs), product labels, and historical data. TSFs must meet waste analysis plan requirements under the [LANL Hazardous Waste Facility Permit](#) prior to acceptance of the generator's waste for treatment or storage. If a Waste Generator does not supply complete and adequate waste characterization information, the TSF or off-site Treatment Storage and Disposal Facility (TSDF) may not accept the waste. Waste Generators and TSFs must ensure that waste characterization documentation is maintained, protected, controlled, and available for internal and/or any third party reviews.

**Note:** TSF workers become "Waste Generators" when activities at the TSF (e.g., repackaging, sorting, and segregation) lead to the generation of regulated waste or trigger re-characterization of the waste stream as described within this section.

Waste Generators must consult with their WMCs to start the waste characterization process, when working with a new process that may create a new regulated waste stream, or when waste processing has been modified. [ADESH-TOOL-111, Waste Characterization](#) and [ADESH-TOOL-314, Radioactive Characterization](#), help Waste Generators document and characterize regulated wastes, and describe additional tools with requirements for their regulated waste types. The Waste Generator must sign a Waste Stream Profile (WSP) Certification Statement in the [Waste Compliance and Tracking System \(WCATS\)](#), assuring that waste characterization is correct and meets applicable waste acceptance criteria. This certification attests to the accountability and legal defensibility of the waste characterization for internal or external third party reviews.

As part of the requirement to characterize regulated waste, the Waste Generator must

- submit a waste stream profile in WCATS for each waste stream;
- upload all waste characterization documentation into WCATS and ensure that all valid documentation is referenced in WCATS with a unique identifier;
- sign the WSP Certification Statement assuring accurate and complete characterization of the waste; and
- annually re-evaluate waste characterization for each WSP to verify accuracy of the waste characterization. For compliance purposes, this annual period is defined as less than one year since the original waste characterization or the last recharacterization.

After waste has been identified and entered into WCATS, the waste characterization will be reviewed by the WM-DO prior to a new waste stream identification number being activated. WM-DO screens documentation for LANL facilities that characterize waste streams by acceptable knowledge, process knowledge (or knowledge of process), historical knowledge, etc.

**Note:** If waste with no disposal path must be generated, the Waste Generator must contact [WM-DO](#) via e-mail for prior authorization.

TSFs must meet waste characterization requirements of the [LANL Hazardous Waste Facility Permit](#), including specifically the Waste Analysis Plan (WAP).

#### 3.2.1.a Waste Generator Recharacterization

Waste Generators must recharacterize and update waste characterization based on the following conditions if

- after an annual re-evaluation, there is any change to waste characterization information, including changes to the waste-generating process or operations;
- there is a change to the waste-generating processes or operations;
- analytical results indicate a change in the waste stream;
- new characterization information becomes available;
- a waste container is opened and secondary material is added to the container;
- waste is repackaged and secondary material is added during this process;
- there is a change in the ownership of a WSP; or
- the Waste Generator is notified that waste received at an off-site facility does not match a pre-approved waste analysis certification or accompanying shipping documentation.

**Note:** TSF workers may become Waste Generators when waste processing includes one of the activities described above.

The Waste Generators must contact the WM-DO in the event it is required to update waste characterization information described above. WM-DO will work through appropriate subject matter experts to assess the identified changes in the waste characterization and recommend actions.

#### 3.2.1.b *Recharacterization at Treatment and Storage Facilities (TSFs)*

Under the [LANL Hazardous Waste Facility Permit](#), TSFs must update their waste characterization when the following occurs:

- a Waste Generator determines one or more of the above conditions in Section 3.2.1.a has occurred;
- TSF workers have reason to believe that the process or operation generating the waste has changed;
- waste is repackaged and secondary material is added during this process;
- waste received at an off-site facility does not match a pre-approved waste analysis certification or accompanying shipping documentation; or
- an inspection reveals that the waste does not match the identity of the waste specified by the Waste Generator or a manifest on a shipping paper.

#### 3.2.2 **Waste Containing Potential Radioactive Contamination**

Potentially radioactive wastes (e.g., the waste or waste item was generated in a radiologically contaminated area) are summarized in [ADESH-TOOL-306](#), *Potentially Radioactive or Mixed Investigation-Derived Waste*. The Waste Generator is required to meet the actions specified in the tool.

If radioactive contamination is reasonably suspected to be present at a site (e.g., in wastes from potential release sites or poorly documented decontaminated and decommissioned sites), the waste must be characterized. See [ADESH-TOOL-314](#), *Radioactive Characterization*. The Authorized Release Limits Process is defined in [P411](#), *Authorized Release Limits Proposal Process* and is applicable only to materials that

- have residual radioactivity below the dose limits specified in [DOE O 458.1](#), *Radiation Protection of the Public and the Environment*; and
- do not contain [74-4-1 NMSA 1978](#), *Hazardous Waste Act* and [Resource Conservation and Recovery Act \(RCRA\)](#) constituents.

**Note:** For release of potentially activated metals previously stored in Radiation Control areas, see [RP-SOP-077.004](#), *LANSCe Metals Clearance Process* and [RP-SVS-RIC-TBD-03](#), *Technical Basis Documentation Regarding Health Physics Measurements for the Unrestricted Release of Metals from LANSCe*.

### 3.2.3 Waste Verification

To ensure compliance with DOE Directives, federal and state laws and regulations, [P930-1](#), *LANL Waste Acceptance Criteria*, and reporting requirements, WM-DO completes a verification checklist in accordance with [WM-PROG-QP-236](#), *Waste Certification Program Waste Verification*, and must verify accurate and thorough waste characterization. This includes the random or selected waste stream and can include the following (if applicable):

- a review of radiological assay;
- a visual examination of the waste;
- a sampling and chemical analysis of the waste;
- a verification that the waste has been properly characterized in accordance with applicable procedures, acceptable knowledge documentation, non-destructive assay records, chemical analysis documentation, and, if applicable, documentation of past visual examinations of the waste;
- a review of past verification results to determine the nature of any pre-existing problems; and
- a review of facility waste processes and procedures to verify operations meet waste certification requirements.

**Note:** The [LANL Hazardous Waste Facility Permit](#) requires an annual verification of the waste characterization of one percent of the total number of hazardous waste streams characterized solely by acceptable knowledge and managed at TA-54 in the previous calendar year.

### 3.3 Packaging Waste

Low-Level Waste (LLW) and Mixed Low-Level Waste (MLLW) must meet waste package certification requirements before the waste is disposed. Waste Generators of LLW and MLLW must make a request via e-mail to [WM-DO](#) to arrange for waste package certification. If there are specific waste issues regarding LLW and MLLW, the Waste Generator must contact the [WCO](#). To ensure compliance with federal and state laws, regulations and reporting requirements, the WCO will rely on established waste disposition requirements that are consistent with Waste Acceptance Criteria (WAC) requirements from the Nevada National Security Site (NNSS).

To prepare for waste disposition, the Waste Generator must refer to the [600 Series](#) FSDs, (*Transport of Waste*). All waste information regarding waste disposition must be documented in WCATS and a disposal request must be submitted through the WCATS system by the WMC. This will prompt WM-DO to initiate a waste shipment. WM-DO must be consulted on all specific waste issues as WM-DO is responsible for compliance with safe packaging and transportation requirements to off-site receiving facilities.

### 3.4 Storing Waste

Waste Generators and TSFs will store their waste in accordance with the requirements listed below.

#### 3.4.1 Waste Areas

Waste Generators are responsible for ensuring that on-site waste accumulation and temporary storage (e.g., less-than 90-day storage areas) are conducted in [Registered Waste Areas](#). For more detailed instruction see the following:

- [ADESH-TOOL-206](#), *Hazardous Waste*;

- [300 Series Tools](#), (Radioactive Waste);
- [400 Series Tools](#), (Universal Waste);
- [500 Series Tools](#), (NM Special Waste);
- [ADESH-TOOL-712](#), Polychlorinated Biphenyl (PCB) Waste; and
- [ADESH-TOOL-716](#), Used Oil for Recycle.

TSFs can meet the requirements in the [LANL Hazardous Waste Facility Permit](#) by operating to the [800 Series Tools](#), (Treatment, Storage, and Disposal Facilities).

The WMC must also certify waste protection and storage by evaluating the waste and using [ADESH-TOOL-300](#), General Radioactive Waste Management, and [P930-1](#), LANL Waste Acceptance Criteria.

#### **3.4.2 Site Treatment Plan (STP) for Mixed Transuranic (MTRU) and Mixed Low-Level Waste (MLLW) at TSFs**

In accordance with the Site Treatment Plan (STP), LANL must report to NMED all MTRU waste and MLLW that will be stored at the Laboratory after 1-year of its accumulation start date. For STP waste containers, the start date refers to the date of receipt for storage at the LANL TSF. The STP summarizes the status of the current inventory, describes the progress being made to dispose of the waste, identifies treatment and disposal options for addressing the STP inventory, and provides overall schedules for management and disposition of mixed waste to demonstrate compliance with Land Disposal Requirement storage prohibitions under the RCRA and demonstrates compliance with the Federal Facility Compliance Order issued by NMED under the New Mexico Hazardous Waste Act.

To meet these compliance requirements, Waste Generators must notify the [STP Manager](#) via e-mail at least three months prior to the waste exceeding its 1-year accumulation start date that their waste must be added to the STP. The Waste Generators must provide the following:

- for MLLW and MTRU waste, an explanation as to why the waste will exceed its 1-year accumulation start date; and
- for MLLW only, compliance milestone dates when waste will be shipped off-site for treatment and disposal.

#### **3.4.3 Radioactive Waste Management Basis**

For Radioactive Waste, the FOD or RLM must submit [Form 2107](#), *Radioactive Waste Management Basis Report Form* (RWMB) to WM-DO. The Waste Generator must submit an updated [RWMB](#) to WM when there are changes in facility operations or waste status. For assistance in completing the [RWMB](#), contact WM-DO. The LANL [RWMB](#) consists of

- identification of the generating process owner;
- identification of every area where radioactive waste is generated;
- identification of waste management activities;
- reference to documents that support the [RWMB](#);
- institutional documents applicable to waste management;
- waste authorization basis documents pertinent to the waste generating facility;
- waste management processes within the facility and their locations;

- waste matrix (solid or liquid);
- waste categories generated, i.e., LLW, MLLW, TRU, and MTRU;
- volumes of generated waste by matrix, category, and annual estimates;
- characterization methods for each waste stream;
- how waste certification is protected when waste is transported;
- how waste certification is protected during waste storage;
- how the waste management quality assurance program protects waste certification; and
- proposed disposition for each waste stream (reported under "Life-Cycle Waste Management").

WM-DO then reviews, edits, and forwards the RWMB to the DOE Field Element Manager for review and approval. WM-DO monitors compliance and is responsible for reporting the status of compliance to the DOE Field Element Manager. If WM-DO detects radioactive waste activities that were not included in the RWMB, WM-DO will notify the FOD or RLM to submit an updated [RWMB](#) with a description of the newly identified activities. DOE will not approve radioactive waste management activities that were not included in the RWMB, and may terminate the activities if not reported.

WM-DO may allow facilities to generate radioactive waste without continuous updates to the RWMB, e.g., remedial projects, superfund projects, etc., so long as

- the facilities (1) are performing work in accordance with [EP-DIR-SOP-10021](#), *Characterization and Management of Environmental Programs Waste* and (2) have provided WM-DO a completed and signed Waste Characterization Strategy Form (WCSF); and
- WM-DO has approved the work being performed at the facility and DOE concurrence has been obtained by WM-DO.

#### 3.4.3.a Storage Extension Requests

If a determination is made that radioactive waste cannot be shipped for final disposition within one year of waste generation, the FOD or RLM (or Facility Point of Contact) must submit a request for storage extension to WM-DO at least three months before exceeding the one year expiration of the date the container was sealed. The storage extension request must be submitted by e-mail an updated RWMB that contains

- a checked box, "Extension Request;"
- a specific description of the waste;
- a specific description of the location of the waste;
- the specific length of time it will take to dispose of the waste; and
- the reason the extension is needed.

After reviewing the request, WM-DO will send a letter to the DOE Field Element Manager at least 60 days prior to the storage expiration requesting DOE approval for continued storage. If DOE approval has not been received and the waste is nearing the storage expiration, the Waste Generator must notify [WM-DO](#) via e-mail at least three days prior to the expiration date that DOE approval has not been received. If approval for extension is not granted, DOE will provide direction back to WM-DO.

**Note:** If WM-DO discovers that an extension request was never submitted, WM-DO will initiate a PFITS issue in accordance with [P322-4](#), *Laboratory Performance Feedback and Improvement Process*.

#### **3.4.4 Processing Waste at Treatment and Storage Facilities (TSFs)**

Waste processing at TSFs is conducted within storage units and includes all activities that require opening of a container after it has been characterized and sealed, including but not limited to sorting, segregating, repacking, and resizing of waste. TSFs cannot engage in any sorting, segregating, repackaging, or resizing activities that involve the addition of any new material (e.g., sorbents, inert materials, secondary waste) or an activity that could potentially change the chemical or physical composition of the waste (i.e., that could constitute "waste treatment"). These activities at TSFs must be described in the [LANL Hazardous Waste Facility Permit](#) or a permit modification is required. If processing will require a change to the physical, chemical or biological character or composition of the waste, or any secondary material will be added to the waste, a permit modification may be required and Environmental Protection-Compliance Programs ([ENV-CP](#)) must be contacted via e-mail. Waste processing activities are conducted in the areas outlined in [ADESH-TOOL-810](#), *Waste Processing at Permitted Units*.

#### **3.4.5 Treating Waste**

Waste Generators and TSFs cannot engage in waste "treatment" activities unless one of two conditions exist

- the waste treatment is authorized under the [LANL Hazardous Waste Facility Permit](#); or
- the waste treatment is exempt from permitting requirements.

Waste treatment, as broadly defined, includes "any method ... or process ... designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize such waste, or so as to recover energy or material resources from the waste, or so as to render such waste nonhazardous; less hazardous; (or) safer to transport, store, or dispose of" ([40 CFR Section 260.10](#), *Hazardous Waste Management System: General, Definitions*). Waste treatment may be conducted under the [LANL Hazardous Waste Facility Permit](#) or interim status documents as outlined in the following:

- [ADESH-TOOL-903](#), *TA-55 Storage in Tanks and Treatment by Stabilization*;
- [ADESH-TOOL-904](#), *Treatment by Open Burning*; and
- [ADESH-TOOL-905](#), *Treatment by Open Detonation*.

All LANL workers and subcontractors must contact ENV-CP prior to engaging in an activity that may constitute waste treatment (e.g., addition of sorbents or evaporation). Requirements for other permit exempted treatment that do not have specific location requirements (i.e., Waste Generator areas or TSFs), are found in [ADESH-TOOL-901](#), *Elementary Neutralization* and [ADESH-TOOL-902](#), *Absorption without a Permit*.

#### **3.5 Shipping Waste**

Once the waste is ready for shipment, the Waste Generator must contact the [WCO](#), who serves as the LANL Point of Contact for the off-site receiving facility and the Los Alamos Field Office. The WCO reviews the appropriate documentation pertaining to the off-site receiving facility and/or the Los Alamos Field Office, such as the TSDF waste profiles, DOE profiles, subcontracts, etc.

### **3.5.1 Shipments of Radioactive Waste to Non-Department of Energy (DOE) Treatment, Storage, and/or Disposal Facilities (TSDFs)**

If a Waste Generator would like to send waste to a facility that is not owned or operated by DOE, the Laboratory must obtain an "exemption request for direct off-site shipment of Radioactive Waste to Non-DOE and TSDFs" (DOE O 435.1 Exemption Request). To obtain this exemption, the Waste Generator must send an e-mail to [WM-DO](#) identifying

- the specific waste stream with background description (including radioactivity);
- the exact location and volume of waste to be generated or placed in a container; and
- the length of time needed to complete the project's waste disposition.

WM-DO reviews the e-mail and coordinates the shipment with appropriate LANL workers, organizations and subcontractors. WM-DO and LANL's shipping subcontractor prepare the DOE O 435.1 Exemption Request, which includes a cost analysis and description of the Waste Generator's request. WM-DO then submits the final DOE O 435.1 Exemption Request to the DOE Los Alamos Field Office.

The DOE Los Alamos Field Office will review WM-DO's submittal and evaluate the request. If approved, the DOE Los Alamos Field Office will forward the request to DOE Headquarters. WM-DO will be notified if the request has been approved by DOE. If notification is not received within 15 working days from WM-DO's submittal to the DOE Los Alamos Field Office, WM-DO will contact the DOE Los Alamos Field Office for a documented response.

### **3.6 Disposing Waste**

LANL does not have on-site disposal capacity for RCRA, TRU, or MLLW wastes. LANL retains limited capacity for on-site disposal for LLW under special circumstances and with prior approval from [WM-DO](#). WM-DO will determine the optimal disposal path for each waste stream in consultation with its disposal subcontractor(s) and DOE and based on a cost benefit analysis of available options. Primary consideration will be given to off-site DOE TSDFs, commercial TSDFs approved by DOE, and on-site disposal respectively.

All waste shipments (on-site and off-site) must be coordinated through [WM-DO](#). This process supports waste certification to final TSDF destination.

### **3.7 LANL's Oversight of Waste Management**

Compliance oversight at LANL occurs throughout the life-cycle of waste planning, minimization, generation, characterization, accumulation, packaging, management and disposition. ENV-CP provides guidance on DOE Directives and State Regulatory requirements. Waste management operations, including waste certification, are conducted by WM-DO to meet additional requirements from DOE Directives. Internal assessments and external inspections are performed to ensure institutional waste management compliance is met and waste certification is maintained.

#### **3.7.1 Certification Assessments for All Waste Types**

To certify that facility waste operations are in accordance with [WM-PROG-QP-250](#), *Radioactive Waste Facility Certification*, and [ADESH-TOOL-300](#), *General Radioactive Waste Management*, WM-DO performs compliance assessments at a facility level against [DOE O 435.1](#), *Radioactive Waste Management*, [DOE M 435.1](#), *Radioactive Waste Management Manual*, RCRA regulations, and this document. These assessments are documented in an Independent Assessment report in

accordance with [P328-2, Independent Assessment](#), and distributed to the FOD, RLM and participants after the assessment has been completed.

Assessments include, but are not limited to

- an effectiveness evaluation to determine the nature of any pre-existing problems. When pre-existing problems are found, the assessment team reviews corrective actions that have been taken and determines whether the corrective actions are effective for continuous quality improvement;
- an evaluation of registered waste areas for waste certification compliance. RCRA corrective actions and opportunities for improvement must be reported to Environmental ENV-CP;
- an inspection of the registered waste area and review of the inspection records;
- a tracking and review of past corrective actions resulting from independent assessments conducted by other LANL organizations, DOE, or their contractors, if possible and;
- a review of nonconformance and corrective action documentation and, when appropriate, an action plan to periodically monitor facilities to ensure appropriate corrective actions are being taken.

WM-DO must notify the FOD and RLM in advance of upcoming site visits and assessments. Registered waste area information will be recorded and tracked in a database managed by ADESH.

### **3.7.2 LANL Self-Assessment**

DOE and NMED expect LANL to assess compliance of the Waste Generator's waste management activities and TSF permit compliance. Waste Generator assessments include but are not limited to, accumulation and registered waste areas, LANL inspection forms, containers or tanks, labels, time limits, worker health and safety practices, and the Waste Generator's records and training records. Compliance evaluations routinely include sites outside registered areas (see the ADESH-FSD for requirements on various registered waste areas including TSF requirements). Assessments of registered waste areas are performed by WM-DO and ENV-CP in addition to periodic Independent Assessments (see [P328-2, Independent Assessment](#)) and Management Assessments (see [P328-3, Management Assessment](#)).

Waste Generators and TSFs must retain waste documents and records in accordance with [PD1020, Document Control and Records Management](#).

### **3.8 Waste Certification**

The LANL Waste Certification Program was developed, documented and implemented to ensure that the waste acceptance requirements of off-site facilities receiving waste for storage, treatment, and disposal are met. LANL waste management components that are provided complex wide support waste certification.

Waste certification is a process by which a Waste Generator affirms that waste meets the waste acceptance criteria of the off-site facility to which the Waste Generator intends to transfer the waste for treatment, storage, and disposal. As such, LANL's Waste Certification Program includes the waste certifying process from generation to disposition (cradle-to-grave) for all regulated wastes. Identifying, characterizing and recharacterizing waste with consideration for associated hazards and signing the WSP certification statement is conducted by the Waste Generator and WMC. Assuring compliance performance includes waste verification, storage certification, packaging certification, data management, and STP and RWMB reporting. Finally, preparing waste for shipment, disposal acceptance, final disposition and on-going assessments completes LANL's Waste Certification Program.

Waste certification includes WM-DO providing oversight of Waste Generator activities to meet the requirements of this document and the waste acceptance criteria of the receiving TSDF. LANL's Waste Certification Program includes compliance for all waste types. Fig. 2 illustrates key components of LANL's Waste Certification Program.

Fig. 2. Key components of the LANL Waste Certification Program

#### 4.0 RESPONSIBILITIES

##### 4.1 Facility Operations Director (FOD)

- If needed, issues local-level procedures for waste management activities in accordance with Section 3.1.
- Routes local level procedures through review and approval process adopted by WM-DO.
- Ensures completion and management of their facility's *Radioactive Waste Management Basis Report* (RWMB [Form 2107](#), *Radioactive Waste Management Basis Report Form*).

##### 4.2 Responsible Line Manager (RLM)

- Participates and encourages others' participation in WM-DO's assessment for facility certification.
- Assists in the management and implementation of corrective actions, findings and opportunities for improvement regarding their facilities.
- Ensures waste management compliance at their facilities.

##### 4.3 Waste Management Division Leader

- Ensures waste management compliance processes are implemented across the Laboratory.
- Ensures waste management oversight processes are implemented.

- Acknowledges the process by which local waste management procedures are reviewed and approved before they are issued or implemented.
- Initiates the review of waste characterization documentation by subject matter experts when new information or discrepancies in waste characterization are discovered.
- Monitors work in progress and conducts effectiveness evaluations (i.e., through facility assessment and waste verification).
- Documents compliance or noncompliance with characterization/certification requirements.
- Identifies the facility's waste management quality assurance program and how it protects waste certification and the proposed disposition for each waste stream.
- Performs re-evaluation and verification of characterization information for facilities' waste generation operations.
- Evaluates corrective actions regarding waste management as timely or untimely.
- Reports corrective action regarding waste management adequacy to management.
- Provides notification to facility RLMS of the status and performance of activities under assessment.
- Documents facility waste certification reviews resulting from internal (e.g., Authorization Authority) or external (e.g., DOE) audits and assessments, tracking corrective actions and reporting observations to management.
- Determines whether waste management staging/storage facilities and systems are adequate to certify waste and to maintain waste certification until shipment.
- Ensures LLW/MLLW waste containers are certified by a qualified Waste Package Certifier (WPC).
- Completes receiving facility documentation and notifications for LANL.
- Maintains LANL facility operations certification and off-site receiving facility certification.
- Provides WCO disposition approval for final TSDF destination.
- Performs LANL Self Assessments of radioactive waste staging and storage areas in accordance with Section 3.7.2.
- Ensures that the WCO and designees certify waste for disposition to off-site TSDFs.
- Performs annual verification of the waste characterization of one percent of the total number of hazardous waste streams characterized solely by acceptable knowledge and managed at TA-54 in the previous calendar year.
- Provides notification and reporting to regulatory oversight bodies.
- Provides WMC qualification training.

#### **4.4 Waste Management Coordinators (WMCs)**

- Certify waste for storage in LANL's registered storage areas.
- Verify waste containers or tanks meet the requirements for transfer into storage at their facility or verify waste can be transferred to a TSF or TSDF.

- Ensure waste characterization and acceptable knowledge documentation is accurate, defensible, and complete.
- Ensure waste meets accepting facility WAC and follows the ADESH-FSD processes.
- Ensure the WSP is completed and submitted in WCATS.
- Support Waste Generators in internal assessments and external inspections.
- Ensure waste containers are closed in accordance with manufacturer's instructions prior to shipment.
- Ensure waste container or tank is adequate to protect the waste against external sources of contamination, and ensure waste management integrity and compatibility.

#### 4.5 Environmental Protection - Compliance Programs (ENV-CP) Group Leader

- Directs the waste management compliance process.
- Coordinates information and compliance requests and activities with regulators.
- Manages the ADESH-FSD collection.
- Receives information on RCRA corrective actions and opportunities for improvement from WM-DO's assessment of facility certification.
- Ensures that LANL Self Assessments in accordance with Section 3.7.2 are performed.
- Assists WM-DO by providing regulatory information and institutional guidance on waste management requirements.
- Maintains the [LANL Hazardous Waste Facility Permit](#) and is responsible for developing permit modification requests.

#### 4.6 Waste Generators

- Comply with the requirements in this document and other requirements documents referenced herein.
- Characterize waste pursuant to the requirements in this document and the ADESH-FSDs.
- Before waste is generated and/or packaged, conduct waste avoidance or minimization analysis in consultation with the WMC.
- Ensure adequacy of the documentation used for waste characterization (acceptable knowledge and physical/chemical analysis).
- Maintain registered waste areas within their span of control.
- Manage on-site storage as required in this document.
- Initiate the WSP.
- Notify the [STP Manager](#) via e-mail, at least three months prior to the waste exceeding its 1-year accumulation start date that their waste must be added to the STP.

#### 5.0 IMPLEMENTATION

The requirements in this document are effective on the issue date. All ADESH FSDs that are referenced in this document will be reviewed and updated by December 31, 2015, in accordance with [ADESH-AP-007, Document Control](#) and [PD311, Requirements System and Hierarchy](#). The FSDs will be reviewed and updated on a three year schedule beginning with the issue date of P409, Rev.5.

## 6.0 TRAINING

The training courses listed in this section are required for all workers who generate waste (except office trash) and workers who manage waste or work at TSFs. Workers must notify their managers of expired training. Unless specified, there is no grace period for the training requirements below; this training must be completed and kept current.

**Note:** Site-specific training may be required and directed by RLMs.

### 6.1 Waste Generators and WMCs must complete:

- [Course #23263](#), *Waste Generation Overview Live*; and
- [Course #21464](#), *Waste Generation Overview Refresher SS*, every three years.

### 6.2 Persons who work in, or are owners of, less-than-90-day waste accumulation areas must complete:

- [Course #7488](#), *RCRA Personnel Training*, and
- [Course #28582](#), *RCRA Refresher (Self-Study)*, every twelve months.

**Note:** The RCRA-related training listed above must be completed within six months of employment or new assignment; during this period, workers must work under the supervision of a trained worker.

### 6.3 Persons who work in TSFs must complete:

- [Course #7488](#), *RCRA Personnel Training*;
- [Course #28582](#), *RCRA Refresher (Self-Study)*, every twelve months; and
- [Course #23263](#), *Waste Generation Overview Live*.

**Note:** The RCRA-related training listed above must be completed within six months of employment; during this period, workers must work under the supervision of a trained worker.

### 6.4 Remediation Workers must complete:

- [Course #23263](#), *Waste Generation Overview Live*;
  - [Course #4464](#), *HAZWOPER: General Site Worker*, or [Course #4465](#), *HAZWOPER: Limited Site Worker*;
  - [Course #28652](#), *HAZWOPER: Refresher*, every twelve months;
  - [Course #7488](#), *RCRA Personnel Training*;
  - [Course #28582](#), *RCRA Refresher (Self-Study)*, every twelve months; and
- or other courses as assigned by the supervisor.

## 7.0 EXCEPTION OR VARIANCE

Changes in the processes conducted at the TSF or changes to the TSF structure must be reviewed by ENV-CP for necessary permit modifications. Hazardous waste treatment activities that are not authorized by the [LANL Hazardous Waste Facility Permit](#) or interim status documents must be reviewed by ENV-CP for regulatory compliance.

## **8.0 DOCUMENTS AND RECORDS**

### **8.1 Office of Record**

The Policy Office is the Laboratory Office of Record for this Institutional Document and maintains the administrative record.

### **8.2 Waste Management Records**

WM-DO and ENV-CP work with Waste Generators, FODs and RLMs to ensure that the following records and documentation are kept in accordance with [PD1020](#), *Document Control and Records Management*:

- WCATS for waste characterization
- [Form 2107](#), *Radioactive Waste Management Basis Report Form*
- *RWMB Storage Extension Request*
- DOE O 435.1, *Exemption Request*
- STP plan and correspondence to and from NMED
- Independent Assessment Reports
- Trend analysis on waste management data
- ADESH database containing [Registered Waste Area](#) information
- Inspection Forms

## **9.0 DEFINITIONS AND ACRONYMS**

### **9.1 Definitions**

See LANL [Definition of Terms](#) and [ADESH-TOOL-101](#), *Waste Management Glossary*

### **9.2 Acronyms**

See LANL [Acronym Master List](#).

ADESH	Associate Director for Environment, Safety, and Health
AP	Administrative Procedures
DEAR	Department of Energy Acquisition Regulation
DOE	Department of Energy

## 10.0 HISTORY

Revision History		
03/27/08	P409, Rev. 0	Initial Issue.  This document and its linked Waste Management Tools replaces and cancels the Laboratory Implementation Requirements (LIRs) and Laboratory Implementation Guidance (LIG) listed below. The LIRs will remain in force and effect for each nuclear facility until that facility completes the Unreviewed Safety Question (USQ) or Unreviewed Safety Issue (USI) review determinations. • LIG 404-00-02, <i>Acceptable Knowledge Guidance</i>

Revision History		
		<ul style="list-style-type: none"> <li>• LIR 404-00-02, <i>General Waste Management Requirements</i></li> <li>• LIR 404-00-03, <i>Hazardous and Mixed Waste Requirements</i></li> <li>• LIR 404-00-04, <i>Managing Solid Waste</i></li> <li>• LIR 404-00-05, <i>Managing Radioactive Waste</i></li> <li>• LIR 404-00-06, <i>Managing Polychlorinated Biphenyls</i></li> </ul>
05/22/08	P409, Rev. 1	Section 6.0 Training: Changed Waste Profile Form Signers to Waste Generators and removed Waste Documentation Forms from the Waste Generators list.
06/04/10	P409, Rev. 2	Extensive revision: Clarified training requirements and responsibilities, corrected links to tools, clarified tool creation process, and simplified the document.
03/19/12	P409, Rev. 3	<p>This document cancels RN0808, <i>Requirements for Recycling Metal from Areas posted for Radiological Hazards</i>.</p> <p>Section 6.0: Separated the third bullet into two bullets, reflecting the separate training requirements for persons who work in Treatment, Storage, and/or Disposal Facilities (TSDFs) and Remediation Workers, to align with the Laboratory's Hazardous Waste Permit. Added <a href="#">Course #23263, Waste Generation Overview Live</a>, as a training requirement for persons who work in TSDFs and Remediation Workers.</p>
04/10/13	P409, Rev. 4	<p>Removed references to cancelled Form 1346, <i>Waste Profile Form</i>, which has been replaced by the Waste Stream Profile (found in the <a href="#">Waste Compliance and Tracking System (WCATS)</a>).</p> <p>Section 5.0: Updated to reflect effective date of May 28, 2013 for applicable nuclear, high- and moderate-hazard facilities and accelerators.</p> <p>Performed three year review in accordance with <a href="#">PD311, Requirements System and Hierarchy</a>.</p> <p>Updated links, titles, and acronyms.</p>
07/30/15	P409, Rev. 5	<p>Performed three-year review in accordance with <a href="#">PD311, Requirements System and Hierarchy</a>.</p> <p>This document cancels P930-2, <i>Radioactive Waste Certification Program</i> and P930-3, <i>Off-Site Shipment of Chemical, Hazardous, or Radioactive Waste</i>. Although this is not "a new document," it is a complete re-write of P409, Rev. 4 as the requirements from P930-2 have been merged with this document. P409 title has also changed to "LANL Waste Management."</p>

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision # 1</b>		<b>Activity/Task Title:</b> FY AREA G, J, & L SNOW REMOVAL	
<b>Work Document: (WO#/Task)</b> 00496309-01		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/11.20.14 Revised by Daniel Roybal/181831/11-5-15	
<b>TA:</b> 54	<b>Building:</b> G, J & L	<b>Room:</b>	<b>Additional Location Description:</b> 54 areas G, J & L

**Activity Description/Overview:** This continuous work order includes snow removal: Sweep, shovel, addition of salt to salt bins, and use of heavy equipment for clearing snow. Clear all walk-ways, door entry on domes and stairways for personnel safety. If needed obtain snow shovels and brooms for manual removal.

**Revision 1:** Signatures Expired and updated IWD to new requirements.

**List Names of Hazard Analysis (HA) Team:** Alfredo Rodriguez, Orlando Archuleta, James Martinez, Robert Maes  
**Date HA Performed:** 10.16.15

**PRECAUTIONS/LIMITATIONS/PREREQUISITES:**

1. If steps cannot be completed as described, or if unforeseen situations occur, **PAUSE/STOP WORK**, stabilize the situation, contact your supervisor, and await further instructions before proceeding.
2. Work Package Tasks and Job Steps may be worked concurrently and/or Out-of-Sequence at the discretion of the Job Supervisor (PIC).
3. Have PIC verify with operations that no other activities are being conducted that could impact safe working conditions.
4. When leaving an RCA, tools and material need to be surveyed out by an RCT. Follow RCT's instructions.
5. At all times, within the posted boundary of a CRA, ordinary combustible materials, such as cardboard boxes, plastic bags, paper, rags, and PPE not in use, must be minimized. These combustibles should, to the maximum extent practical, be kept to less than 20 lb. weight.

**NOTE:**

***A FUEL PACKAGE is a package of combustible material, not including flammable liquid, which weighs 20 lb. or more.***

6. (\$) If greater than 20 lb. of combustible material is required or expected to be generated during the performance of the work, this **FUEL PACKAGE SHALL** be continuously **ATTENDED** by a person who has been trained to monitor fire hazards and to elicit an appropriate response in the case of a fire. **FUEL PACKAGES** in use **SHALL** be located not less than 9 feet from other **FUEL PACKAGES** and waste containers. [LCO 3.2.2]

**NOTE:**

***Flammable liquids are tracked by container and/or tank capacity. The total flammable liquid inventory includes the vehicle's fixed fuel tank capacity as well as any transported containers of flammable liquids.***

**NOTE:**

***Propane is not considered a liquid fuel and is excluded from the following.***

7. Before bringing a vehicle/equipment into a CRA, the total flammable liquid inventory on that vehicle **SHALL** be authorized by the TA-54 Area G Ops Center via phone or radio. Total flammable liquid inventory **SHALL** be less than or equal to 100 gallons. Once inside the CRA, vehicles and/or flammable liquids **SHALL** be continuously **ATTENDED**.
8. To every extent possible, vehicle/equipment should be parked outside the CRA boundary in a designated location.
9. PIC shall ensure workers shall have the appropriate training as identified below:
10. Training to perform maintenance work :
  - Curriculum ID 10968, WQ LOG Maintenance Worker
11. Training to enter/access Area G:
  - TP – 115, Rad Worker II or qualified escort
  - TP – 256, RCRA Hazardous/Mixed Waste Worker or qualified escort
  - TP – 5488, TA-54 Resident Employee or qualified escort

  - Curriculum ID 751 – WQ LOG Teamster – Heavy Equipment
  - Curriculum ID 754 – WQ LOG Teamster – Fuel Truck Driver

**GENERAL HAZARDS**

*(identify hazards and associated controls)*

The following PPE is required for all work: Additional PPE may be required in a specific work step:

- Safety Shoes
- Safety Glasses with Side shields
- Hardhats (when overhead hazards are present, wear as required)

Slips, Trips and Falls:

- Be aware of ground and floor conditions.
- Ensure work area is clean and clear of debris in order to prevent slips, trips and falls

Back Strains:

- Use proper lifting and bending technique at all times
- Utilize the “two person rule” when lifting greater than 50 pounds.

Hand injury caused from contact work:

- Wear hand protection commensurate to the job task i.e., leather, rubber, mechanic (M-Pact), water proof, puncture resistant, Kevlar, etc. for contact work. Gloves may be removed when manual dexterity is required (i.e., small screws, etc.) as long as injury to the hand is negligible.

Working with simple hand tools:

- Inspect all tools prior to use.
- Inspect tools prior to use. Use all tools properly and in accordance w/ safety standards.

Exposure to work hazards by tenants/adjacent personnel or public:

- Control access to work area with caution tape, barricades, and/or signs
- Barricades must be easily removed.
- In the event of an emergency, immediately stop, clear the work area and remove the tape barricades. Leave work area/equipment in safe condition if possible.

Excessive noise exposure:

- Areas with excessive noise levels (noise levels in the work area that cause workers to raise their voices when speaking) must be evaluated by qualified ESH personnel to evaluate possible engineering and administrative controls.
- Wear hearing protection if noise exposure is at or above the exposure limit.
- Areas with noise levels at or above the exposure limit must be posted with noise warning signs.
- Enroll affected personnel in a Hearing Conservation Program if the noise exposure is at or above ACGIH established exposure limits, i.e., an 8-hour time-weighted average (TWA) of 85 decibels (dB).

## FORM 2100-WC

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision # 1</b>		<b>Activity/Task Title:</b> FY AREA G, J, & L SNOW REMOVAL	
<b>Work Document: (WO#/Task )</b> 00496309-01		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/11.20.14 Revised by Daniel Roybal/181831/11-5-15	
<b>TA:</b> 54	<b>Building:</b> G, J & L	<b>Room:</b>	<b>Additional Location Description:</b> 54 areas G, J & L

Exposure to adverse weather conditions: Heat Stress; Dehydration, Heat stroke

- Monitor for early signs of the onset of heat stress while working. Any one sign of heat stress is: blurred vision, fainting, pale skin, profuse sweating, nausea, vomiting and headaches which may cause heat cramps, heat exhaustion (dehydration) and/or heat stroke.
- Ensure adequate breaks and fluids are taken

Exposure to adverse weather conditions: Cold stress, Frost bite, Hypothermia.

- Dress appropriately
- Monitor for early signs of the onset of hypothermia while working. Any one sign of hypothermia is: shivering, slurred speech, goose bumps, numbness, loss of feeling or prickly type discomfort in extremities which may cause frost bite, hypothermia and/or dehydration.
- Ensure adequate breaks are taken

Exposure to road/heavy equipment hazards by craft:

- Wear high-visibility vests when working in proximity to a roadway. That is where workers will be 15 feet or less from the road while conducting work.
- Wear high-visibility vests when working in proximity to heavy equipment. Equipment operators must be able to easily see workers on foot.

### Task 1: Preliminary Actions/Continuous Actions

**⚠ WARNING**

**Multiple uses of hand and power tools, (example: ATV's and snow throwers.  
Failure to follow proper PPE can cause serious harm.**

#### 1.1 SNOW REMOVAL

- Slips, Trips and Falls:
- Use proper PPE at all times.
- Assure that all guards and shields required by the Manufacturers are correctly in place.

### Task 2: Work steps

**⚠ WARNING**

**Refueling operations have the potential of explosive (combustible), skin/eye irritant and inhalation hazards.  
Failure to follow proper PPE can cause serious harm.**

#### 2.1 TEAMSTERS-REFUELING equipment: ATVs, snow blowers, tractors etc as required.

- Refuel in well-ventilated area to prevent vapor buildup and inhalation exposure.
- Engine shall be stopped and should be cooled before refueling.
- Avoid skin contact with fuel and wash area if contact happens.
- Maintain a 35 foot distance from any source of ignition.
- Fire extinguisher shall be present.
- Follow the PPE requirements of the SDS for gasoline/diesel.

**Reference:** SDS's for "Gasoline, diesel fuel, motor oil and hydraulic fluid"

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

<b>TA:</b> 54	<b>Building:</b> G, J & L	<b>Room:</b>	<b>Additional Location Description:</b> 54 areas G, J & L

**⚠ WARNING**

**Exposure to Ice Melt may cause skin irritation.**

**2.2 LABORERS, OPERATORS, TEAMSTERS REMOVE** snow and ice from sidewalks and stairways using snow shovels, ATV's, snow blowers, and riding tractors. APPLY de-icer on walkways and stairways as needed to mitigate hazard.

- Follow the PPE requirements of the SDS—Safety glasses, appropriate clothing to prevent prolong skin contact (i.e., gloves, long sleeve shirts)

**Reference:** SDS for “DE-Icer”

**⚠ WARNING**

**Heavy equipment operations pose crushing injury hazards; Struck by equipment, Roll over hazards, Fire in equipment, Backing Hazards, Equipment left unattended in an energized state, Backing Hazards**

**2.3 OPERATORS, TEAMSTERS REMOVE** snow and ice from roads and parking lots using heavy equipment.

- Heavy equipment hazards:
- Perform a pre-job inspection of the equipment to be used
- Operate in accordance with all applicable DOT and NM State traffic laws
- Set emergency brake when leaving vehicle unattended
- Use chocks when parked on an incline

**Vehicle/equipment hazards:**

- Backing accidents: Use a spotter when backing
- Communication is maintained with spotter while operating equipment
- Struck by heavy equipment, Use postings or wear bright colored vest
- Exercise care when moving around operating equipment
- Give room for vehicles and people
- Be aware of work area
- Obstructed views and overhead hazards; The equipment shall be positioned such that at least 10 feet is maintained from overhead lines

**Fire & sparks hazards:**

- A fire extinguisher, as required by OSHA and NFPA, shall be present. Ensure a 10 lb. fire extinguisher (minimum ) is present

**Spills/leak hazards:**

- Report any spills to supervision at time of spill;
- Hydraulic line leak-contact with chemicals

**Reference:** SDS's for “Gasoline, diesel fuel, motor oil and hydraulic fluid”

**Task: 3 Project Completion.**

**3.1 NO PMT REQUIRED FOR THIS WORK ORDER TASK.**

**3.2 DOCUMENT** lessons learned on AP-Work-002.11 form, Work Documentation Form and the apparent cause codes form.

**3.3 NOTIFY MSS-EWMO** superintendent of job completion. Complete Post Maintenance Work Package Review for final approvals for this work.

<b>Work Document: (WO#/Task )</b> 00496309-04		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/9.11.14 Revised by Daniel Roybal/181831/11-5-15	
<b>TA:</b> 54	<b>Building:</b> 0038	<b>Room:</b>	<b>Additional Location Description:</b> RANT

**GENERAL HAZARDS**

*(identify hazards and associated controls)*

The following PPE is required for all work: Additional PPE may be required in a specific work step:

- Safety Shoes
- Safety Glasses with Side shields
- Hardhats (when overhead hazards are present, wear as required)

Slips, Trips and Falls:

- Be aware of ground and floor conditions.
- Ensure work area is clean and clear of debris in order to prevent slips, trips and falls

Back Strains:

- Use proper lifting and bending technique at all times
- Utilize the “two person rule” when lifting greater than 50 pounds.

Hand injury caused from contact work:

- Wear hand protection commensurate to the job task i.e., leather, rubber, mechanic (M-Pact), water proof, puncture resistant, Kevlar, etc. for contact work. Gloves may be removed when manual dexterity is required (i.e., small screws, etc.) as long as injury to the hand is negligible.

Working with simple hand tools:

- Inspect all tools prior to use.
- Inspect tools prior to use. Use all tools properly and in accordance w/ safety standards.

Exposure to work hazards by tenants/adjacent personnel or public:

- Control access to work area with caution tape, barricades, and/or signs
- Barricades must be easily removed.
- In the event of an emergency, immediately stop, clear the work area and remove the tape barricades. Leave work area/equipment in safe condition if possible.

Excessive noise exposure:

- Areas with excessive noise levels (noise levels in the work area that cause workers to raise their voices when speaking) must be evaluated by qualified ESH personnel to evaluate possible engineering and administrative controls.
- Wear hearing protection if noise exposure is at or above the exposure limit.
- Areas with noise levels at or above the exposure limit must be posted with noise warning signs.
- Enroll affected personnel in a Hearing Conservation Program if the noise exposure is at or above ACGIH established exposure limits, i.e., an 8-hour time-weighted average (TWA) of 85 decibels (dB).

Exposure to adverse weather conditions: Heat Stress; Dehydration, Heat stroke

- Monitor for early signs of the onset of heat stress while working. Any one sign of heat stress is: blurred vision, fainting, pale skin, profuse sweating, nausea, vomiting and headaches which may cause heat cramps, heat exhaustion (dehydration) and/or heat stroke.
- Ensure adequate breaks and fluids are taken

- Refuel in well-ventilated area to prevent vapor buildup and inhalation exposure.
- Engine shall be stopped and should be cooled before refueling.
- Avoid skin contact with fuel and wash area if contact happens.
- Maintain a 35 foot distance from any source of ignition.
- Fire extinguisher shall be present.
- Follow the PPE requirements of the SDS for gasoline/diesel.

**Reference:** SDS's for "Gasoline, diesel fuel, motor oil and hydraulic fluid"

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision # 1</b>		<b>Activity/Task Title: FY 54-38 (RANT) SNOW REMOVAL</b>	
<b>Work Document: (WO#/Task )</b> 00496309-04		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/9.11.14 Revised by Daniel Roybal/181831/11-5-15	
<b>TA:</b> 54	<b>Building:</b> 0038	<b>Room:</b>	<b>Additional Location Description:</b> RANT

**⚠ WARNING**

**Exposure to Ice Melt may cause skin irritation.**

**2.2 LABORERS, OPERATORS, TEAMSTERS REMOVE** snow and ice from sidewalks and stairways using snow shovels, ATV's, snow blowers, and riding tractors. APPLY de-icer on walkways and stairways as needed to mitigate hazard.

- Follow the PPE requirements of the SDS—Safety glasses, appropriate clothing to prevent prolong skin contact (i.e., gloves, long sleeve shirts)

**Reference:** SDS for “DE-Icer”

**⚠ WARNING**

**Heavy equipment operations pose crushing injury hazards; Struck by equipment, Roll over hazards, Fire in equipment, Backing Hazards, Equipment left unattended in an energized state, Backing Hazards**

**2.3 OPERATORS, TEAMSTERS REMOVE** snow and ice from roads and parking lots using heavy equipment.

- Heavy equipment hazards:
- Perform a pre-job inspection of the equipment to be used
- Operate in accordance with all applicable DOT and NM State traffic laws
- Set emergency brake when leaving vehicle unattended
- Use chocks when parked on an incline

**Vehicle/equipment hazards:**

- Backing accidents: Use a spotter when backing
- Communication is maintained with spotter while operating equipment
- Struck by heavy equipment, Use postings or wear bright colored vest
- Exercise care when moving around operating equipment
- Give room for vehicles and people
- Be aware of work area
- Obstructed views and overhead hazards; The equipment shall be positioned such that at least 10 feet is maintained from overhead lines

**Fire & sparks hazards:**

- A fire extinguisher, as required by OSHA and NFPA, shall be present. Ensure a 10 lb. fire extinguisher (minimum ) is present

**Spills/leak hazards:**

- Report any spills to supervision at time of spill;
- Hydraulic line leak-contact with chemicals

**Reference:** SDS's for “Gasoline, diesel fuel, motor oil and hydraulic fluid”

**Task 3: Project Completion.**

**3.1 ENSURE** de-icer is applied on walkways and stairways as needed to mitigate slipping hazards.

**3.2 DOCUMENT** lessons learned on AP-Work-002.11 form, Work Documentation Form and the apparent cause codes form.

**3.3 NOTIFY MSS-EWMO** superintendent of job completion. Complete Post Maintenance Work Package Review for final approvals for this work.

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

<b>Revision #</b>		<b>Activity/Task Title: FY AREA G, J, &amp; L GROUNDS MAINTENANCE</b>	
<b>Work Document:</b> WO# 00520921-02		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/9.14.15	
<b>TA:</b> 54	<b>Building:</b> AREA G, L, J	<b>Room:</b> outside	<b>Building:</b>

**Activity Description/Overview:** Standing Work Order for TA54 Area G, L & J Cleanup Waste or Trash From Grounds and Containers and Move Dumpsters, Remove and Dispose Weeds, Grass, Leaves, Limbs, Brush, Trees, and Collect Wind Blown Debris.

**List Names of Hazard Analysis (HA) Team:** Alfredo Rodriguez, James Martinez, Paul Lietz, Robert Maes

**Date HA Performed:** 9/24/10 & 6.30.15

**Reference:** Applicable Excavation Permit, OSH-PLAN-001.1 Silica Hazard Control Plan, EP-AREAG-FO-DOP-1081

**PRECAUTIONS/LIMITATIONS/PREREQUISITES:**

*(include training/authorizations, approved permits, and area postings)*

1. If steps cannot be completed as described, or if unforeseen situations occur, **PAUSE/STOP WORK**, stabilize the situation, contact your supervisor, and await further instructions before proceeding.
2. Work Package Tasks and Job Steps may be worked concurrently and/or Out-of-Sequence at the discretion of the Job Supervisor (PIC).
3. Have PIC verify with operations that no other activities are being conducted that could impact safe working conditions.
4. When leaving an RCA, tools and material need to be surveyed out by an RCT. Follow RCT's instructions.
5. If materials are required to perform this work assure materials are available and/or staged **PRIOR** to commencing field work.

**NOTE:**

*A Combustible Restrictive Area (CRA) is an area identified by signage that encompasses the thermal separation boundary of Defined Area(s), alerting operators that TSR-driven combustible/flammable controls apply within the marked area. The CRA may be at the thermal separation boundary of a Defined Area or encompass thermal boundaries of multiple Defined Areas.*

6. At all times, within the posted boundary of a CRA, ordinary combustible materials, such as cardboard boxes, plastic bags, paper, rags, and PPE not in use, must be minimized. These combustibles should, to the maximum extent practical, be kept to less than 20 lb. weight. **Only in AREA G.**

**NOTE:**

*A FUEL PACKAGE is a package of combustible material, not including flammable liquid, which weighs 20 lb. or more.*

7. (\$) If greater than 20 lb. of combustible material is required or expected to be generated during the performance of the work, this **FUEL PACKAGE SHALL** be continuously **ATTENDED** by a person who has been trained to monitor fire hazards and to elicit an appropriate response in the case of a fire. **FUEL PACKAGES** in use **SHALL** be located not less than 9 feet from other **FUEL PACKAGES** and waste containers. [LCO 3.2.2] **Only in AREA G.**

**NOTE:**

*Flammable liquids are tracked by container and/or tank capacity. The total flammable liquid inventory includes the vehicle's fixed fuel tank capacity as well as any transported containers of flammable liquids.*

**NOTE:**

*Propane is not considered a liquid fuel and is excluded from the following.*

8. Before bringing a vehicle/equipment into a CRA, the total flammable liquid inventory on that vehicle **SHALL** be authorized by the TA-54 Area G Ops Center via phone or radio. Total flammable liquid inventory **SHALL** be less than or equal to 100 gallons. Once inside the CRA, vehicles and/or flammable liquids **SHALL** be continuously **ATTENDED**. **Only in AREA G.**
9. To every extent possible, vehicle/equipment should be parked outside the CRA boundary in a designated location. **Only in AREA G.**
10. PIC shall ensure workers shall have the appropriate training as identified below:

<b>TA:</b> <b>54</b>	<b>Building:</b> <b>AREA G, L, J</b>	<b>Room:</b> <b>outside</b>	<b>Building:</b>

11. The following trainings are required for the General Hazard Section:
12. Training to perform maintenance work :
  - Curriculum ID 10968, WQ LOG Maintenance Worker
13. Training to enter/access Area G
  - Curriculum ID 115, Rad Worker II or qualified escort
  - Curriculum ID 256, RCRA Hazardous/Mixed Waste Worker or qualified escort
  - Curriculum ID 5488, TA-54 Resident Employee or qualified escort
14. Training to perform Labor work:
  - Curriculum ID 645 – WQ LOG Labor.
  - Curriculum ID 744 – WQ LOG Labor – HAZWOPER
  - Curriculum ID 2869 – WQ LOG Labor– Traffic Control
  - Curriculum ID 7074 – WQ LOG Labor– Excavation/Fill/Soil Disturbance Activities
  - Curriculum ID 5819 – WQ LOG Labor– Respirator
  - Curriculum ID 750 – WQ LOG Labor– Tree Felling
15. Training for excessive noise exposure:
  - Curriculum ID – 2307, Hearing Conservation/Noise Training Requirement
16. Training to perform Fire Watch
  - Curriculum ID – 3065, Fire Extinguisher (Portable)
17. Training to perform Operator – Heavy Equipment work:
  - Curriculum ID 633 – WQ LOG Operator – Heavy Equipment.
18. Training to perform Heavy Equipment Mechanics work:
  - Curriculum ID 634 – WQ LOG Heavy Equipment Mechanic
  - Curriculum ID 740 – WQ LOG Heavy Equipment Mechanic – Fuel Truck/Service Truck
19. Training to Wear a respirator per the IH instructions:  
Curriculum ID – 2677, Respirators: **Air Purifying**

**ENTRY CONDITIONS**

- Ensure controls for equipment such as cranes, backhoes, and bucket trucks that are operating in the vicinity of switchyards or around transmission lines are included in the IWD.
- When working in remote areas and using outdoor power equipment, validate if it is endangered species season.
- When moving heavy equipment near energized electrical equipment, ensure there is a spotter.
- Be aware of weather conditions that could affect a spotter's visibility.
- Ensure water is available for workers in high temperature areas to prevent dehydration.
- Ensure appropriate controls and precautions are taken when exposure to respirable crystalline silica is caused by other activities in the work area. If needed contact IH for guidance.
- This standing work package has you working in a defined area. Make sure you understand the restrictions, limitations and requirements defined in the "Prerequisites" section of this IWD.
- Extreme weather conditions. Dress appropriately to avoid heat stress or hypothermia.

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision #</b>		<b>Activity/Task Title: FY AREA G, J, &amp; L GROUNDS MAINTENANCE</b>	
<b>Work Document: WO# 00520921-02</b>		<b>Planner/Preparer (Name/Z#/Date) Robert Maes/088731/9.14.15</b>	
<b>TA: 54</b>	<b>Building: AREA G, L, J</b>	<b>Room: outside</b>	<b>Building:</b>

**GENERAL HAZARDS**

*(identify hazards and associated controls)*

The following PPE is required for all work: Additional PPE may be required in a specific work step:

- Safety Shoes
- Safety Glasses with Side shields
- Hardhats (at the discretion of the PIC)
- High Visibility Vests

Hand injury caused from contact work:

- Wear hand protection commensurate to the job task i.e., leather, rubber, mechanic (M-Pact), water proof, puncture resistant, Kevlar, etc. for contact work. Gloves may be removed when manual dexterity is required (i.e., small screws, etc.) as long as injury to the hand is negligible.

Back Strains:

- Utilize the “two person rule” when lifting greater than 50 pounds.

Shock or electrocution during use of electric power tool

- Use GFCI or insulated power tools

Exposure to work hazards by tenants/adjacent personnel or public:

- Control access to work area with caution tape, barricades, and/or signs.

Exposure to adverse weather conditions: Heat Stress; Dehydration, Heat stroke

- Monitor for early signs of the onset of heat stress while working. Any one sign of heat stress is: blurred vision, fainting, pale skin, profuse sweating, nausea, vomiting and headaches which may cause heat cramps, heat exhaustion (dehydration) and/or heat stroke.
- Ensure adequate breaks and fluids are taken

Exposure to adverse weather conditions: Cold stress, Frost bite, Hypothermia.

- Dress appropriately
- Monitor for early signs of the onset of hypothermia while working. Any one sign of hypothermia is: shivering, slurred speech, goose bumps, numbness, loss of feeling or prickly type discomfort in extremities which may cause frost bite, hypothermia and/or dehydration.
- Ensure adequate breaks are taken

Wildlife and biological hazards:

- Wear Snake Gators or Chaps for snake bite protection.
- Personnel shall avoid animals (dead or alive). Notify the Operations Manager for removal of dead animals.
- Look for and avoid rodent droppings and nests. If droppings or nests must be disturbed to complete work, notify the Operations Manager for removal and disinfecting.
- Avoid creating dust in areas where rodent nests or droppings are observed.
- If exposure to potentially infected rodents is suspected, affected personnel should get medical attention as soon as possible.
- Watch for snakes and spiders especially in grassy areas.

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision #</b>		<b>Activity/Task Title: FY AREA G, J, &amp; L GROUNDS MAINTENANCE</b>	
<b>Work Document:</b> <b>WO# 00520921-02</b>		<b>Planner/Preparer (Name/Z#/Date)</b> <b>Robert Maes/088731/9.14.15</b>	
<b>TA:</b> <b>54</b>	<b>Building:</b> <b>AREA G, L, J</b>	<b>Room:</b> <b>outside</b>	<b>Building:</b>

**Continue on next page**

- If found, avoid contact and notify others.
- Do not disturb bee/wasp nests.
- Personnel shall notify the ESH staff, and PIC if allergic to bees/wasps.
- Personnel who are allergic to bee/wasp stings shall notify the PIC and carry the appropriate medication while at the worksite.

**Snakes, vermin, insects and other wildlife:**

- When working in areas where wildlife is potentially present pay attention to footing and surroundings at all times.
- If an encounter occurs, then back away slowly (DO NOT run).
- If a person is bitten
- Stop work
- Call 911, if required and prepare to transport employee to OCMED.
- Call OPS @ 665.2735
- Call Superintendent
- Notify the Superintendent as to what bit or stung the employee.

**Task 1: Preliminary Actions/Continuous Actions**

- 1.1 Multiple USES** of hand and power tools, (example: lawn mowers, trimmers, weed eaters, pruners wood chippers, chain saws, Zero turn mowers, etc, or the use of tying a metal rope or chain around heavy brush to the end of a truck hitch and pulling it out of the ground).
- Use proper PPE at all times.
  - Assure that all guards and shields required by the Manufacturers are correctly in place.
  - Follow the requirements of the applicable excavation permit

**WARNING**

**Disturbance of native soil may generate dust containing silica. Inhalation of respirable crystalline silica particles can result in silicosis.**

**NOTE:**

*Contact an Industrial Hygienist before commencing work for silica evaluation when using mowers, ATV's, trimmers, weed eaters, pruners, wood chippers, chain saws, winch's, tractors or heavy equipment that will generate dust from disturbance of soil.*

**1.2 Respiratory Protection**

- A Qualified IH must be consulted for assistance in respirator selection.
- In no case should we ever rely solely on a respirator to protect the workers. Some form of dust control or suppression should always be practiced. Where dust suppression or collection is insufficient to provide the required level of protection, then respiratory protection will be required.

**AP-WORK-002: Attachment 15**  
**FORM 2100-WC**

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision #</b>		<b>Activity/Task Title: FY AREA G, J, &amp; L GROUNDS MAINTENANCE</b>	
<b>Work Document:</b> WO# 00520921-02		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/9.14.15	
<b>TA:</b> 54	<b>Building:</b> AREA G, L, J	<b>Room:</b> outside	<b>Building:</b>

**Continue on next page**

- Dependent on the level of hazard present, a filtering face piece (N95 dust mask), half-face, or full-face respirator with P100 (particulate) cartridges may be specified. For maximum comfort during outdoor and long duration tasks the use of powered air purifying respirators (PAPR) with P100 cartridges should be considered.
- Respirator protection **shall not be required** when humidity level is verified to be in excess of 50% at the time of the activity per the guidance of OSH-PLAN-001.1 Silica Hazard Control Plan.
- Respirator protection **shall be required** when humidity level is verified below 50% at the time of the activity per the guidance of OSH-PLAN-001.1 Silica Hazard Control Plan

- 1.3 POST** notice/caution signage at entry points (facility and roads) to area where weed mitigation is to be performed. Signage shall be posted either the night before weed mitigation is to start or the morning of the activity (prior to starting work).

**Task 2: PERFORM Grounds Maintenance as Required**

**⚠ WARNING**

**Disturbance of native soil may generate dust containing silica. Cuts, lacerations, electrocution and amputation hazards**

**NOTE:**

*Contact an Industrial Hygienist before commencing work for silica evaluation when using mowers, ATV's, trimmers, weed eaters, pruners, wood chippers, chain saws, winch's, tractors or heavy equipment that will generate dust from disturbance of soil.*

- 2.1 PERFORM** grounds maintenance activities at various locations in Area G via weed cutting around buildings and walkways with gas powered hand tools and ATV attached mowers. Mow areas as needed using a farm tractor w/ mower attachment. landscape within various locations using hand tools, Zero turn mowers, ATV's trimmers, weed eaters pruners, wood chippers, chain saws, winch, herbicides (such as Roundup), with hand sprayer, etc. Follow the requirements of **EP-AREAG-FO-DOP-1081** and the applicable excavation permit.

**⚠ WARNING**

**DO NOT** trim branches that are hung up in overhead power lines. Maintain a safe distance between power lines and pruning equipment at all times.

**General controls for all activities:**

- Crew shall walk down area before weed mitigation begins.
- Ensure work area is appropriately, marked and/or barricaded to notify co-located workers of mowing/weed clearing hazards.
- Use caution when operating equipment and hand tools
- Perform daily inspections
- Read, understand, and acknowledge familiarity with equipment and operators manual
- Operator's manuals are available at Roads and Grounds or Heavy Equipment.
- Maintain a 10 lb ABC fire extinguisher in the immediate work area.
- Use all tools properly and safely.
- Do not set hot equipment down in grass areas or where combustible materials are in close proximity.

# AP-WORK-002: Attachment 15

## FORM 2100-WC

 <b>Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)</b>			
<b>Revision #</b>		<b>Activity/Task Title: FY AREA G, J, &amp; L GROUNDS MAINTENANCE</b>	
<b>Work Document:</b> WO# 00520921-02		<b>Planner/Preparer (Name/Z#/Date)</b> Robert Maes/088731/9.14.15	
<b>TA:</b> 54	<b>Building:</b> AREA G, L, J	<b>Room:</b> outside	<b>Building:</b>

### Continue on next page

- Wear hearing protection while operating gas powered tools.
- Wear protective clothing that covers all skin to prevent contact with hot surfaces.
- Do not wear loose fitting clothing or hanging items.
- Conduct a work-rest cycle at 45 minutes of work and 15 minutes of break during each hour. During the break make sure to rest in a shaded area and to hydrate with water during this 15 minute break.
- Minimize the use of weed eaters. Use brush mowers in flat areas and areas less than 20 degrees slope. Only use weed eaters in areas where nothing else would work (i.e. along fence lines and along building edges).

### NOTE:

*Contact an Industrial Hygienist before commencing work for silica evaluation when using mowers, ATV's, trimmers, weed eaters, pruners, wood chippers, chain saws, winch's, tractors or heavy equipment that will generate dust from disturbance of soil.*

### Chain saw usage controls:

- Use normal PPE along with safety glasses with side shields under face shields and Kevlar chaps, long sleeves, and hearing protection.
- Ensure that all guards are in place and utilized when in use.

### Mower usage controls: Operator of mower *shall* wear the following:

- Tyvek coveralls
- Dependent on the level of hazard present, a filtering face piece (N95 dust mask), half-face, or full-face respirator with P100 (particulate) cartridges may be specified. For maximum comfort during outdoor and long duration tasks the use of powered air purifying respirators (PAPR) with P100 cartridges should be considered.
- Wear face shield with safety glasses and side shields when not wearing respirators.

### Weed eater usage: Maintain work area awareness and work in a clear area giving room for vehicles and people.

Do not place hands/limbs or anything else in area where objects are moving.

### Operator of weed eater *shall* wear the following:

- Tyvek coveralls
- Dependent on the level of hazard present, a filtering face piece (N95 dust mask), half-face, or full-face respirator with P100 (particulate) cartridges may be specified. For maximum comfort during outdoor and long duration tasks the use of powered air purifying respirators (PAPR) with P100 cartridges should be considered.
- Wear face shield with safety glasses and side shields when not wearing respirators.

### NOTE:

*Teamster will be used for fire mitigation, vegetation control (which will include operating a tank trailer), hydro-seeder, or water trailer as needed-for laborer work a teamster will ONLY be used for fire mitigation on a LANL fire danger rating at very high or above.*

### Gas Powered Tools:

- Use 2-man rule.
- Ensure when using gas power tools that worker is in an area that is well ventilated.
- Wear hearing protection while operating gas powered tools.
- Let tool cool down before touching motor, storing or re-fueling.
- Wear face shield with safety glasses and side shields when not wearing respirators.

### All Tractor/Mower Operations:

- Aware of work area, work in a clear area giving room for vehicles and people.
- Properly maintain all vehicles.
- Face mower cutting direction/discharge opposite of windows/vehicles when able to do so safely.

**AP-WORK-002: Attachment 15**

<b>TA:</b> 54	<b>Building:</b> AREA G, L, J	<b>Room:</b> outside	<b>Building:</b>

**Continue on next page**

- STOP mowing when pedestrians and vehicles are going by mowing area.
- Do not place hand or anything else in area where objects are moving or rotating.
- A worker or signs will be used as to warn of mowers in area.
- Have a fire watch and follow fire protection guidelines.
- Operator of mower shall wear Tyvek coveralls and full face respirator with P100 cartridge while operating mower.
- Stop cutting operations when pedestrians are in close proximity to mower or mower discharge.

**NOTE:** Leave all weeds and grass where it falls after cutting.

**⚠ CAUTION**

**Contact with chemicals, flammable and environmental contamination hazards**

**2.2 REFUELING** of lawn mowers, trimmers, weed eaters, pruners, wood chippers and chain saws as needed.

**NOTE:** *If refueling is required for any equipment while working in Area G, refuel in established refueling area only*

- When refueling equipment, wear proper PPE identified in SDS.
- Ensure adequate ventilation.
- Do not have spark & flame producing devices with 50ft of the refueling truck or refueling operations.
- All personnel except the qualified operator of the refueling truck are to stand clear while refueling equipment.
- Allow equipment to cool before refueling.
- Refueling may be done with a spark arrested can.
- Have a 10 ABC fire extinguisher present if one is not already on fuel truck.
- If spill occurs, isolate and contain if possible. Operations center must be notified of ALL Spills (even small spills).
- Contact TA-54 Operations Center @ 665.2735 & EM&R @ 667-6211 if a large (greater than 1 gal) fuel spill occurs or if workers are uncomfortable or unfamiliar with the material. Report spill to supervisor once TA-54 Operations Center & EM&R is contacted.
- Review SDS and product labels for specific PPE and Safety requirements.
- AREA G – refuel only in the area designed for fueling per Fire Protection Program TSR 5.6.4.

List Names of HA Team (Attach sheet if necessary): Robyn Petersen

Date HA Performed: August 21, 2014

The RLM approval indicates Integrated Work Management (IWM) has been applied appropriately, work is authorized, workers are qualified, work will be performed in accordance with Environment, Safety, Health, and Quality (ESH&Q)/Security and Safeguards (S&S) requirements and the IWD, and facility safety basis, aggregate hazards, and collocated hazards were appropriately included in the hazard analysis. RLM acknowledges completion of a peer review.

RLM (Signature/Z#/Date) Required: [Signature] 100844 3/4/2016

The Facility Operator Director (FOD) approval on Form 2100 indicates work is appropriate to be conducted in this facility (the activity is within the Authorization Basis [AB] and the work is appropriate for the facility), and facility safety basis, aggregate hazards, and collocated hazards will be managed.

Work activities in multiple FOD jurisdictions, e.g., additional facility safety envelopes, require FOD or Representative approval.

FODs or FOD Representatives (Signature/Z#/Date/TA) Required: [Signature] 3.7.16 114849 54

Subject Matter Exper(s) (SME[s]) Review (Signature/Z#/Date) If Required:

SH [Signature] 211337 March 2 2016

## Hazard Determination by Hazard Grading Table

- ☐ Low-Hazard  
☒ Moderate-Hazard  
☐ High-hazard/Complex  
 IWD Type:  
☐ Standing IWD ☒ Standard IWD

Expiration Date: March 01, 2017

RLM and FOD or FOD Representative reapproval is required.

Annual Review Completed (RLM Initial/Date): RCS 3/4/2016

Name of Primary Person in Charge (PIC) (Print): Robyn Petersen

Name of Alternate PIC: David Williams

Name of Alternate PIC:

Classification review completed, if required.

Reviewer Signature/Z#/Date

## Work Tasks/Steps

Identify work steps/tasks in sequence when such sequencing contributes to safety, security, and/or environmental protection.

## Hazards, Concerns, and Potential Accidents/Incidents

Identify both activity and work-area hazards for each task/step.

## Controls, Preventive Measures, and Bounding Conditions

Specify preventive measures, controls for each hazard (e.g., lockout/tagout points, specific Personal Protective Equipment [PPE], Tamper Indicating Devices [TIDs], alarms, safes, recycle, waste minimization).

## Reference Documents

List permits, operating manuals, security plans, and other reference procedures.

## Training

List training and qualification requirements. (P300, [Integrated Work Management, Section 6.1](#))

Use [Form 2100 Continuation Page](#) for additional Tasks/Steps (if needed) or attach pages to clearly communicate ESH&S/S&S hazards and associated controls.

| <input checked="" type="checkbox"/> Other Bounding Conditions: <u>FOLLOW ALL POSTINGS</u> |   |

**Additional Comments (refer to Job Hazard Analysis [JHA] Tool Facility Notes)**

If training requirements are not met, then an escort is required. All work must be coordinated with Operations Center before work is authorized.

**Instructions:** In the block below, identify work-area hazards that could potentially affect the worker(s) or others. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the site hazards as well as any special training required.

ESH/S&S WORK AREA HAZARDS & CONTROLS				
Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	Work Area Hazard Present	Facility Controls/ Preventive Measures/ Bounding Conditions Specify preventive measures, controls and bounding conditions for each site hazard	Reference Documents List permits, operating manuals, and other reference procedures	Training and Qualification List training requirements ( <a href="#">P300, Integrated Work Management, Section 6.1</a> )
<input type="checkbox"/> <b>No Work Area Hazards</b>				
<b>Ionizing Radiation</b> Work in posted radiological areas, work with radioactive materials, or work on or near radiation producing devices. <b>Specify Hazard:</b>	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Areas are posted as radiological areas.	Current RWP	RadWorker II, Dosimetry, Site Specific training(if not escorted)

ESH/S&S WORK AREA HAZARDS & CONTROLS				
Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	Work Area Hazard Present	Facility Controls/ Preventive Measures/ Bounding Conditions Specify preventive measures, controls and bounding conditions for each site hazard	Reference Documents List permits, operating manuals, and other reference procedures	Training and Qualification List training requirements ( <a href="#">P300, Integrated Work Management, Section 6.1</a> )
<b>Worker Exposure</b> Working near non-ionizing radiation, beryllium, noise, chemicals, hazardous biological materials, lead, asbestos, temperature/humidity extremes, or high explosives. <b>Specify Hazards:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Energized and Operative Systems</b> Working near energized electrical parts, pressure systems, steam lines; near unprotected belts, pulleys, chains or rotating equipment; fuel fired equipment other than vehicles; or spark or flame producing operations. <b>Specify Hazards:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Confined Spaces</b> Entry into tanks, manholes, cooling towers, sumps, or any other area with potentially low oxygen concentration or other hazards such as toxic vapors or engulfment. <b>Specify Hazards:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Elevated Work Surface</b> Elevated work when fall protection is not provided by conventional handrail systems or required per <a href="#">P101-20, Fall Protection Program</a>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Environmental Impact</b> Activities conducted in areas containing potential release site, contaminated soil, sensitive species, watercourse wetlands, floodplain, historical/archeological sites, or other work area condition that can be impacted by or can impact the environment. <b>Specify Hazards:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Security Requirements</b> <b>Specify:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			
<b>Other Hazards</b> <b>Specify:</b>	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No			

I have verified that the hazards identified above adequately identify the area hazards and that the IWM process has been applied appropriately.

FOD or Representative (Signature/Z #/Date) Approval Required

Master  
3.7.16 to 3.7.17

Form 2103

**Integrated Work Document (IWD) Part 3,  
Validation and Work Release**

IWD # DSESH-EWMO-WMC IWD

Revision #: 3 Work Release

By signing below, I verify this activity is compatible with current facility configuration and operating conditions.

**FOD designated Ops Mgr or other facility point-of-contact for work area**

Signature/Z#/Date (If required by FOD): [Signature] 114849 3.7.16

Note: For Standing IWD, release may be given concurrently with signatures on Part 2.

By signing below, I have verified the following:

- I have verified authorization by ensuring approval signatures of the RLM and FOD.
- I have jointly conducted a validation walkdown with workers to confirm the IWD can be performed as written, required initial conditions and other prerequisites are in-place.
- The assigned workers are authorized and are qualified to perform the work in a safe, secure, and environmentally responsible manner.
- I have conducted the pre-job briefing, and all workers (including support workers) have been briefed.
- I have ensured coordination with any required FOD work-area representatives (e.g., area work coordinators).

**Primary PIC (Signature/Z#/Date) Required:** [Signature] 086572 3-8-16

Alternate PIC Signatures **acknowledges** PIC authority is assumed for the first time (Note: Alternate PICs are required to sign only once, but formal handoff includes conferring with previous PIC to obtain all required information associated with the handoff).

**Alternate PIC (Signature/Z#/Date) Required:** [Signature] 284036, 3/7/16

**Alternate PIC (Signature/Z#/Date) Required:** \_\_\_\_\_

**Pre-Job Brief Content**

- What are the critical steps or phases of this activity?
- How can we make a mistake at that point?
- What is the worst thing that can go wrong?
- What controls, preventive measures, and bounding conditions are needed?
- What work permits are required and how will we meet their requirements?
- What are the handoffs and coordination requirements among workers and multiple PICs?
- Are there hold-points including those that require sign-offs?
- What are the pause/stop work responsibilities and expectations (e.g. for unanticipated conditions or hazards)?
- How would we respond to alarms and emergencies?
- Are there lessons learned from previous similar work?
- Is other information needed to perform this activity in a safe, secure, and environmentally responsible manner?
- Does everyone agree to the work tasks/steps, hazards, and controls and commit to follow them?

**Pre-Job Brief Attendance Roster**

By signing below **as required**, I agree to the following:

- I agree to follow the work steps and implement the controls as written as applicable to my work assignments.
- I agree to pause/stop work when conditions or hazards change or when I encounter unexpected conditions during the execution of work, or when work cannot be performed as written, or instructions become unclear during execution.
- I confirm that I am authorized, qualified, and fit to perform the work.

<b>Worker (Signature/Z#/Date)</b>	<b>Worker (Signature/Z#/Date)</b>
<b>Worker (Signature/Z#/Date)</b>	<b>Worker (Signature/Z#/Date)</b>
<b>Worker (Signature/Z#/Date)</b>	<b>Worker (Signature/Z#/Date)</b>
<b>Worker (Signature/Z#/Date)</b>	<b>Worker (Signature/Z#/Date)</b>

**Integrated Work Document (IWD) Part 4,  
Feedback/Post Job Reviews**IWD #: DSESH-EWMO-WMC-IWD Revision #: 3

Feedback of ongoing activities/post job review with the workers and Person in Charge (PIC) should include the following:

- identify inefficiencies, problems during the activity, coordination issues, unanticipated conditions, near misses; and
- develop recommendations for improvement.

A post-job review with the workers and PIC should include the following:

- verify that the activity is complete and make notifications in accordance with Facility Operations Director (FOD) requirements; and
- ensure that follow-through actions (e.g., clean-up, recycle, waste disposal, equipment removal, and secure storage) are completed.

Lessons learned; safety, security, and environmental issues; coordination issues; and unexpected conditions.

Suggested improvements to enter into the Job Hazard Analysis (JHA) Tool, FootPrints, or other Integrated Work Control data bases supported by [Lessons Learned](#).

Other recommendations for improvements to performing this activity. State the positive attributes of this activity.

**Completion Statement**

	UNREVIEWED SAFETY QUESTION SCREENING WORKSHEET
USQ Number: : EWMO-16-054-S	Date: 3/9/2016

## Description of Proposed Change:

This USQ screens the changes proposed by DSESH-EWMO-WMC-IWD, R3. This document is a list of daily activities for the Waste Management Coordinator. The specific change is the addition of a row in the table called Container Movements. This row defines the movements, types of material in the containers and states that the Handling/transport of MAR is only performed per applicable procedures by trained and qualified operators.

<b>Is the change completely enveloped by a previous USQD?</b>  If "Yes", identify the previous USQD and the approval date, and provide a basis below. Check the box indicating that the issue does not require a USQD and sign the form.  USQD Number: _____ Approval Date: _____	<b>Yes</b>  <input type="checkbox"/>	<b>No</b>  <input checked="" type="checkbox"/>
<b>Does the Proposed change involve:</b> 1. A temporary or permanent change in the facility as described in the existing documented safety analysis? 2. A temporary or permanent change in the procedures as described in the existing documented safety analysis? 3. A new test, experiment, or operation not described in the existing documented safety analysis?	<b>Yes</b>  <input type="checkbox"/>  <input type="checkbox"/>  <input type="checkbox"/>	<b>No</b>  <input checked="" type="checkbox"/>  <input checked="" type="checkbox"/>  <input checked="" type="checkbox"/>

- ☐ The issue requires a USQ determination.
- ☒ The issue does not require a USQ determination.

## Basis:

In accordance with SBP-112-3-R1.2 (C.3) "Guidance for Answering the Questions" the following applicable questions are described:

**Does the proposed activity involve a temporary or permanent change in the facility as described in the existing documented safety analysis?**

No; this document change adds container movements to the list of activities for the Waste Management Coordinator. The change states that the movement of containers containing MAR is only to be performed using applicable procedures and trained and qualified operators. No change is made by this document to any of the facilities. Thus, this document change is not a temporary or permanent change to the facilities as described in the existing DSAs.

**Does the proposed activity involve a temporary or permanent change in the procedures as described in the existing documented safety analysis?**

No; the addition of Container Movement to the list of Waste Management Coordinator activities does not make any changes to the approved operating procedures which are to be used to perform the movements. Container movements are described in the existing DSAs and this change does not affect any of the operating procedures. Thus, this document change is not a temporary or permanent change to the procedures as described in the existing DSAs.

	UNREVIEWED SAFETY QUESTION SCREENING WORKSHEET
USQ Number: : EWMO-16-026-S	Date: 2/9/2016

**Does the proposed activity involve a new test or experiment not described in the existing documented safety analysis?**

No; the EWMO BIOs and TSRs describe container movements. Thus, the implementation of DSESH-EWMO-WMC-IWD, R3 is not new test, experiment, or operation.

**Integrated Work Document (IWD) Part 1, Activity Specific Information**

IWD #: 001	Revision #: 0	Activity/Task Title
Work Document #		Conduct DEP related activities associated with EWMO compliance.
DESHS-EWMS 08-16		Planner/Preparer (Name/Z #/Date)
		Paul Martin/ 205838/ 05/12/2016
TA	Building	Room
54	Outside	NA
Other Location(s)(TA) as required		
TA50 WCRRF outside, TA63 TWF outside, and adjacent portions of TA-18, TA-36, TA-51		

**Activity Description/Overview:**

Hazard Analysis (HA) Method Used: ☒ Brainstorming ☐ Other:

List Names of HA Team (Attach sheet if necessary): Paul Martin, David Shrock,

Date HA Performed: 8/14/2016

Conducting DEP related activities associated with EWMO compliance in accordance with the SPCC, MSGP (IP and CGP), RCRA, LANL Hazardous Waste Permit. DEP stormwater activities are limited incidental or emergency activities that can be completed by one or two persons in 30 minutes or less. This work includes Best Management Practices (BMPs) maintenance, installation or repair throughout TA54, TA50 WCRRF, and TA63 TWF. Stormwater BMPs include but not limited to: Berms, Eco-Blok, bar ditches, swales, rock check dams, ponds (e.g., retention and detention), sediment traps, Turf Reinforcement Mats (TRM), wattle/Pro-wattle, and silt/S-Fencing. Also sediment control activities will be conducted at stormwater outfall locations that extend beyond TA54 into TAs 18, 36, and 51. Work also includes RCRA on-the-spot corrections (e.g., rehang signs and postings) and adding additional BMP examples to the existing stormwater list (sandbags, tarps and covers, debris removal, and tightening/reassembling loose fitting stormwater dissipaters).

The RLM approval indicates Integrated Work Management (IWM) has been applied appropriately, work is authorized, workers are qualified, work will be performed in accordance with Environment, Safety, Health, and Quality (ESH&Q)/Security and Safeguards (S&S) requirements and the IWD, and facility safety basis, aggregate hazards, and collocated hazards were appropriately included in the hazard analysis. RLM acknowledges completion of a peer review.

**RLM** (Signature/Z#/Date) Required: David Shrock / 205838 / 8/29/2016

The Facility Operator Director (FOD) approval on Form 2100 indicates work is appropriate to be conducted in this facility (the activity is within the Authorization Basis [AB] and the work is appropriate for the facility), and facility safety basis, aggregate hazards, and collocated hazards will be managed.

Work activities in multiple FOD jurisdictions, e.g., additional facility safety envelopes, require FOD or Representative approval.

**FODs or FOD Representatives** (Signature/Z#/Date/TA) Required: D.A. Sours 218703 8/30/2016

**Subject Matter Expert(s) (SME[s]) Review** (Signature/Z#/Date) If Required: Thanker Taylor 203034 8/29/16

**Hazard Determination by Hazard Grading Table**

- ☐ Low-Hazard  
☒ Moderate-Hazard  
☐ High-hazard/Complex

**IWD Type:**

- ☒ Standing IWD ☐ Standard IWD

Expiration Date: 8/31/2017  
 RLM and FOD or FOD Representative reapproval is required.

**Annual Review Completed** (RLM Initial/Date):

Name of Primary Person in Charge (PIC) (Print): Paul Martin 205838

Name of Alternate PIC: Dave Schroeder 232597

Name of Alternate PIC:

Classification review completed, if required.

## Integrated Work Document (IWD) Part 3, Validation and Work Release

IWD # \_\_\_\_\_ Revision #: \_\_\_\_\_ Work Release

By signing below, I verify this activity is compatible with current facility configuration and operating conditions.

**FOD designated Ops Mgr or other facility point-of-contact** for work area

Signature/Z#/Date (If required by FOD): \_\_\_\_\_

Note: For Standing IWD, release may be given concurrently with signatures on Part 2

By signing below, I have verified the following:

- I have verified authorization by ensuring approval signatures of the RLM and FOD.
- I have jointly conducted a validation walkdown with workers to confirm the IWD can be performed as written, required initial conditions and other prerequisites are in-place.
- The assigned workers are authorized and are qualified to perform the work in a safe, secure, and environmentally responsible manner.
- I have conducted the pre-job briefing, and all workers (including support workers) have been briefed.
- I have ensured coordination with any required FOD work-area representatives (e.g., area work coordinators).

**Primary PIC** (Signature/Z#/Date) Required: \_\_\_\_\_

Alternate PIC Signatures **acknowledges** PIC authority is assumed for the first time (Note: Alternate PICs are required to sign only once, but formal handoff includes conferring with previous PIC to obtain all required information associated with the handoff).

**Alternate PIC** (Signature/Z#/Date) Required: \_\_\_\_\_

**Alternate PIC** (Signature/Z#/Date) Required: \_\_\_\_\_

### Pre-Job Brief Content

- What are the critical steps or phases of this activity?
- How can we make a mistake at that point?
- What is the worst thing that can go wrong?
- What controls, preventive measures, and bounding conditions are needed?
- What work permits are required and how will we meet their requirements?
- What are the handoffs and coordination requirements among workers and multiple PICs?
- Are there hold-points including those that require sign-offs?
- What are the pause/stop work responsibilities and expectations (e.g. for unanticipated conditions or hazards)?
- How would we respond to alarms and emergencies?
- Are there lessons learned from previous similar work?
- Is other information needed to perform this activity in a safe, secure, and environmentally responsible manner?
- Does everyone agree to the work tasks/steps, hazards, and controls and commit to follow them?

### Pre-Job Brief Attendance Roster

By signing below **as required**, I agree to the following:

- I agree to follow the work steps and implement the controls as written as applicable to my work assignments.
- I agree to pause/stop work when conditions or hazards change or when I encounter unexpected conditions during the execution of work, or when work cannot be performed as written, or instructions become unclear during execution.
- I confirm that I am authorized, qualified, and fit to perform the work.

## **I. THREATENED AND ENDANGERED SPECIES HABITAT MANAGEMENT PLAN GENERAL OVERVIEW**

### **1.0 INTRODUCTION**

Los Alamos National Laboratory's (LANL) Threatened and Endangered Species Habitat Management Plan (HMP) was prepared to fulfill a commitment made in the U.S. Department of Energy's (DOE) "Final Environmental Impact Statement for the Dual-Axis Radiographic Hydrodynamic Test Facility Mitigation Action Plan" (DOE 1996). The HMP received concurrence from the U.S. Fish and Wildlife Service (USFWS) in 1999 (USFWS consultation numbers 2-22-98-I-336 and 2-22-95-I-108). In this 2014 update, we retained the management guidelines from the 1999 HMP for listed species, updated some descriptive information, and added the Jemez Mountains salamander (*Plethodon neomexicanus*), which was federally listed in September 2013 (USFWS consultation number 02ENNM00-2014-I-0014).

### **2.0 ROLE OF SITE PLANS IN THE HMP**

The purpose of the HMP is to provide a management strategy for the protection of threatened and endangered species and their habitats on LANL property. The HMP consists of site plans for federally listed threatened or endangered species with a moderate or high probability of occurring at LANL. The following federally listed threatened or endangered species currently have site plans at LANL: Mexican Spotted Owl (*Strix occidentalis lucida*), Southwestern Willow Flycatcher (*Empidonax traillii extimus*), and the Jemez Mountains salamander. Site plans provide guidance to ensure that LANL operations do not adversely affect threatened or endangered species or their habitats.

### **3.0 DESCRIPTION OF AREAS OF ENVIRONMENTAL INTEREST**

Suitable habitats for federally listed threatened and endangered species have been designated as Areas of Environmental Interest (AEIs). AEIs are geographical units at LANL that are managed for the protection of federally listed species and consist of core habitat areas and buffer areas. The purpose of the core habitat is to protect areas essential for the existence of the specific threatened or endangered species. This includes the appropriate habitat type for breeding, prey availability, and micro-climate conditions. The purpose of buffer areas is to protect core areas from undue disturbance and habitat degradation.

Site plans identify restrictions on activities within the AEIs. Allowable activities are activities that the USFWS has reviewed and provided concurrence that these activities are not likely to adversely affect federally listed species. Activities discussed in site plans include day-to-day activities causing disturbance (hereafter referred to as "disturbance activities"), such as access into an AEI, and long-term impacts, such as habitat alteration.

#### **3.1 Definition and Role of Developed Areas in AEI Management**

**Summary:** Habitat alteration is not restricted in developed areas unless it impacts undeveloped core areas of an AEI (e.g., noise and light impacts on a core area). Current ongoing disturbance activities are not restricted in developed areas. Disturbance activities not currently ongoing are

restricted when impacts occur to undeveloped core areas of an AEI that are occupied by a threatened or endangered species.

Developed areas include all building structures, paved roads, improved gravel roads, paved and unpaved parking lots, and firing sites. The extent of developed areas in each AEI was determined using two methods. First, LANL geographic information system (GIS) analysts placed a 15 m (49 ft) border around all buildings and parking lots. For paved and improved gravel roads, the developed area was defined as the area to a roadside fence, if one exists within 9 m (30 ft) of the road, or 5 m (15 ft) on each side of the road, if there is no fence within 9 m (30 ft). If an area of highly fragmented habitat was enclosed by roads, a security fence, or connected buildings, that area was also classified as developed. Developed areas at firing sites were defined as a circle with a 91-m (300-ft) radius from the most centrally located firing pad. Second, LANL GIS analysts overlaid scanned orthophotos onto a map of the Los Alamos area and digitized all areas that appeared developed. These two information sources were overlaid and combined, so that areas classified as developed by either method were considered developed in final maps and analyses. Some areas were confirmed by ground surveys, such as the firing sites. Developed areas are contained in the HMP GIS database.

Developed areas are located in the core and/or buffer of some AEIs. However, developed areas do not constitute suitable habitat for federally listed species. Current ongoing activities in developed areas constitute a baseline condition for the AEIs and are not restricted. New activities including further development within already existing developed areas are not restricted unless they impact undeveloped portions of an AEI core. For example, if light or noise from a new office building in a developed area were to raise levels in an undeveloped core area, those light and noise levels would be subject to the guidelines on habitat alterations. If a proposed action within a developed area does not meet site plan guidelines, it must be individually reviewed for compliance with the Endangered Species Act of 1973 (ESA).

Building a new structure or clearing land within a previously designated developed area in an AEI core does not add to the size of the developed area. New structures in core areas will not be given any developed-area border unless they are individually reviewed for ESA compliance.

Development occurring in the developed area in an AEI buffer can be given a 15 m (49 ft) developed-area border at the discretion of the project leader or facility manager. To expand the size of a developed area in a buffer based on new developments, please contact a LANL biological resources subject matter expert (SME) (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

### **3.2 General Description of Buffer Areas and Allowable Buffer Area Development**

**Summary:** Limited future development is allowed in the currently undeveloped DOE-controlled buffer area under the guidelines of this HMP as long as it does not alter habitat in the undeveloped AEI core (including light and noise guidelines). Development beyond the cap established for each AEI, or greater than 2 ha (5 ac) in size including the developed-area border, requires independent review for ESA compliance.

The purpose of buffer areas is to protect core areas from undue disturbance or habitat degradation. The current levels of development in buffer and core areas represent baseline conditions for this

HMP. No further development is allowed in the core area under the guidelines of this HMP. A limited amount of development is allowed in buffer areas. Under the guidelines of this HMP, individual development projects are limited to 2 ha (5 ac) in size, including a 15 m (49 ft) developed-area border around structures and a 5 m (15 ft) developed-area border around paved and improved gravel roads. Projects greater than 2 ha (5 ac) in area require individual review for ESA compliance (see exceptions for fuels management activities and utility corridor maintenance). New development projects in AEI buffer areas must be reported to LANL biological resources SMEs for tracking (<http://int.lanl.gov/environment/bio/controls/index.shtml>). Descriptions of each of the AEIs give the total area in each buffer area available for development.

### 3.3 Emergency Actions

**Summary:** Contact DOE and LANL biological resources SMEs as soon as possible.

If safety and/or property is immediately threatened by something occurring within an AEI (for example, wildfire, water line breakage, etc.) managers may activate emergency actions. Contact a LANL biological resources SME (<http://int.lanl.gov/environment/bio/controls/index.shtml>), the Environmental Stewardship Group (1-505-665-8855), or the DOE Los Alamos Field Office (Field Office; 1-505-667-6819) as soon as possible. If the emergency occurs outside of regular business hours, contact the Emergency Management Office (1-505-667-6211). This office will then communicate with the appropriate LANL and DOE Field Office personnel.

## 4.0 IMPLEMENTATION OF SITE PLANS

### 4.1 Roles and Responsibilities

**Summary:** LANL's facility managers and operational staff are responsible for ensuring that activities are reviewed for compliance with all applicable site plans. Figure 1 illustrates the process for utilizing site plans. If activities follow approved guidance, there is no requirement for additional ESA regulatory compliance. However, additional National Environmental Policy Act (NEPA), cultural resources, wetlands, or other regulatory compliance actions may be required.

If an activity or project occurs outside of all LANL AEIs and will not impact habitat within an AEI, it does not have to be reviewed for ESA compliance, unless it is a large project. Projects that are larger than 2 ha (5 ac) or cost more than \$5 million require an individual ESA compliance review, even if they are not located within an AEI.

LANL's facility managers are responsible for determining if operations within their geographic and/or programmatic area of responsibility comply with the guidelines in these site plans. Submission of a Permits and Requirements Identification (PR-ID) for a new or modified project is required under Program Description 400 (LANL 2013) and allows managers to identify the requirements within their project area. Deployed environmental professionals and core LANL biological resources SMEs are available to support facility managers. If activities follow site plan guidelines, they do not require any additional ESA regulatory compliance action. However, NEPA, cultural resources, wetlands, or other regulatory compliance actions are not addressed in site plans and additional compliance actions may be required. It is the responsibility of the project leader or facility management staff to ensure that all requirements are satisfied. If you have

questions, contact biological, cultural, NEPA, or other environmental SMEs. Contacts can be found at <http://int.lanl.gov/environment/compliance/ier/index.shtml>.

A single facility may have one or more AEIs within its boundary and the AEIs may be for different species. Some AEIs overlap. In areas where overlap occurs, project managers must follow the guidelines for AEIs of all involved species.

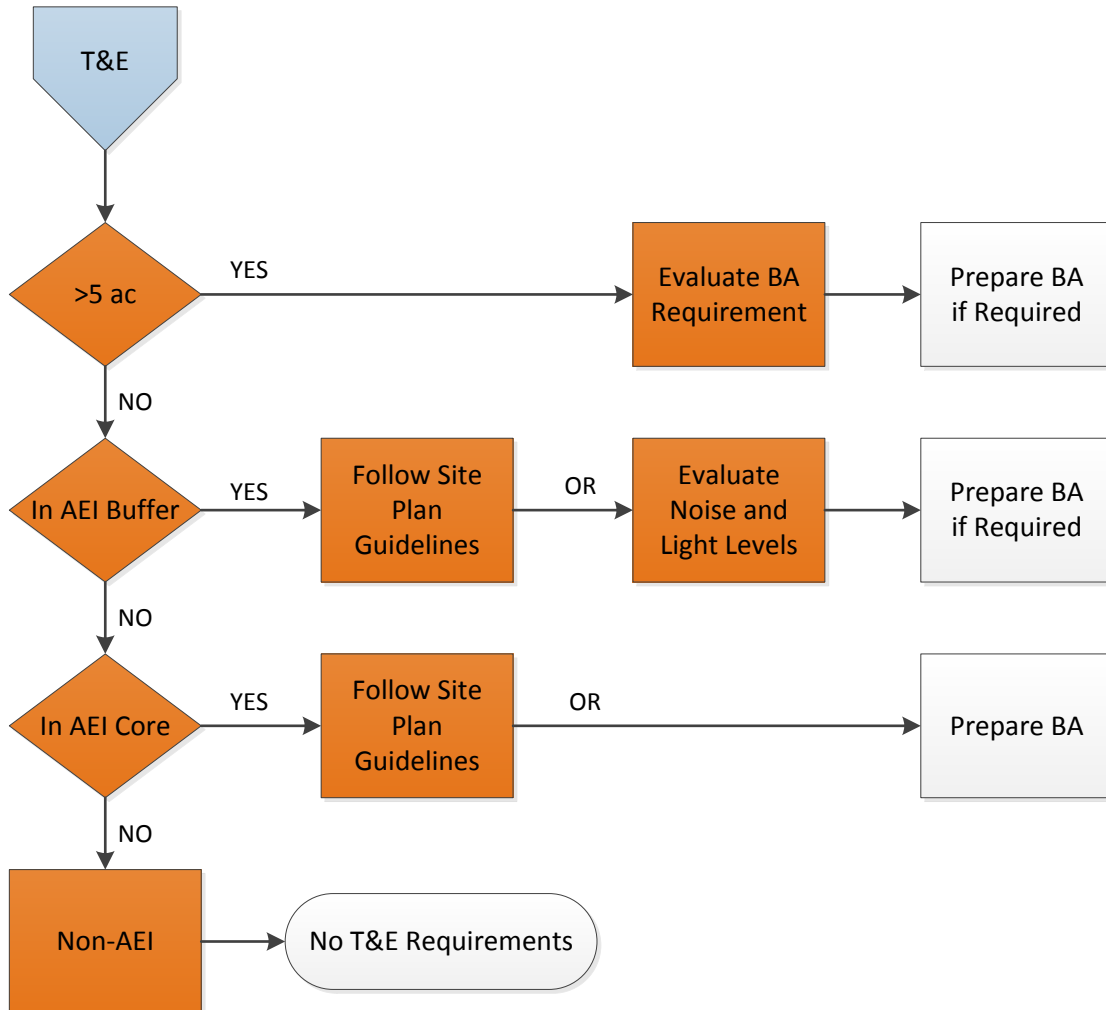

Figure 1. Process flowchart for determining site plan requirements.

## 4.2 If an Activity Does Not Meet Site Plan Guidelines

**Summary:** Activities or projects that do not meet all applicable site plan guidelines must be evaluated individually for compliance with the ESA.

If a project reviewer determines that an activity or project cannot meet the guidelines in applicable site plans, LANL biological resources SMEs evaluate that activity individually for compliance with the ESA. Results of the evaluation of potential impacts allow LANL biological resources SMEs to make recommendations to the DOE Field Office Biological Resources Program Manager

regarding the need for USFWS consultation. An evaluation may result in 1) a DOE Field Office determination that there is no possibility of adverse effects and the activity can proceed, 2) a DOE Field Office suggestion for modifications of the action to avoid adverse effects so that it can proceed, or 3) a DOE Field Office decision to prepare a biological assessment (BA) for the activity and submit it to the USFWS for concurrence. Fieldwork and preparation of a BA can take a few months with an additional 2 to 12 months for DOE Field Office review and then final USFWS concurrence.

### **4.3 Dissemination of Information**

Although information about threatened and endangered species is not classified, it is considered sensitive information. It is in the best interest of threatened and endangered species to restrict specific knowledge about their locations. Habitat locations of threatened and endangered species are not considered sensitive.

## **5.0 CHANGES IN THE HMP SINCE IMPLEMENTATION**

The HMP received concurrence from USFWS and was first implemented in 1999. Since that time, both the Peregrine Falcon (*Falco peregrinus*) and the Bald Eagle (*Haliaeetus leucocephalus*) have been delisted. Site plans for those species have been removed from LANL's HMP. Both species are protected at LANL under the Migratory Bird Treaty Act, and the Bald Eagle is also protected under the Bald and Golden Eagle Protection Act.

The black-footed ferret (*Mustela nigripes*) is federally listed as endangered. However, no sightings of black-footed ferrets have been reported in Los Alamos County for more than 50 years. In addition, no large prairie dog towns, which are prime habitat for black-footed ferrets, have been observed on DOE property around LANL. Therefore, there is no site plan for this species.

In 2005, the USFWS concurred with DOE's proposal for new Mexican Spotted Owl habitat boundaries based on a revised analysis of Mexican Spotted Owl habitat quality within DOE property around LANL (USFWS consultation number 22420-2006-I-0010).

In 2012, the USFWS concurred with DOE's proposal to modify the habitat boundaries for the Los Alamos Canyon Mexican Spotted Owl AEI due to changes from the fire response activities after the Las Conchas wildfire (USFWS consultation number 02ENNM00-2012-IE-0088).

In 2013, the USFWS concurred with the DOE's new site plan for the Jemez Mountains salamander and its addition to LANL's HMP (USFWS consultation number 02ENNM00-2014-I-0014).

## **6.0 DATA MANAGEMENT**

The data used in the implementation of the HMP is stored in a GIS database at LANL.

## II. AREA OF ENVIRONMENTAL INTEREST SITE PLAN FOR THE MEXICAN SPOTTED OWL

### 1.0 SPECIES DESCRIPTION—MEXICAN SPOTTED OWL

#### 1.1 Status

In 1993, the USFWS determined the Mexican Spotted Owl to be a threatened species under the authority of the ESA, as amended (58 Federal Register [FR] 14248). In 1995, the USFWS released its final recovery plan for the owl (USFWS 1995), which was revised in 2012 (USFWS 2012). The USFWS most recently designated critical habitat for Mexican Spotted Owl in 2004 (69 FR 53181).

#### 1.2 General Biology

The Mexican Spotted Owl is found in northern Arizona, southeastern Utah, and southwestern Colorado south through New Mexico, west Texas, and into Mexico. It is the only subspecies of Spotted Owl recognized in New Mexico (USFWS 1995).

The Mexican Spotted Owl generally inhabits mixed conifer and ponderosa pine (*Pinus ponderosa*; Lawson & C. Lawson) - Gambel oak (*Quercus gambelli*; Nutt.) forests in mountains and canyons. High canopy closure, high stand diversity, multilayered canopy resulting from an uneven-aged stand, large, mature trees, downed logs, snags, and stand decadence as indicated by the presence of mistletoe are characteristic of Mexican Spotted Owl habitat. Some owls have been found in second-growth forests (i.e., younger forests that have been logged); however, these areas were found to contain characteristics typical of old-growth forests. Mexican Spotted Owls in the Jemez Mountains seem to prefer cliff faces in canyons for their nest sites (Johnson and Johnson 1985). The recovery plan for the Mexican Spotted Owl recommends that mixed conifer and pine-oak woodland types on slopes greater than 40 percent be protected for the conservation of this owl.

A mated pair of adult Spotted Owls may use the same home range and general nesting areas throughout their lives. A pair of owls requires approximately 800 ha (1,976 ac) of suitable nesting and foraging habitat to ensure reproductive success. Incubation is carried out by the female. The incubation period is approximately 30 days, and most eggs hatch by the end of May. Most owlets fledge in June, 34 to 36 days after hatching (USFWS 1995). The owlets are “semi-independent” by late August or early September, although juvenile begging calls have been heard as late as September 30. Young are fully independent by early October. The non-breeding season runs from September 1 through February 28. Although seasonal movements vary among owls, most adults remain within their summer home ranges throughout the year.

The diet of Mexican Spotted Owls nesting in canyons consists primarily of woodrats (*Neotoma* spp.) and mice (*Peromyscus* spp.) with lesser amounts of rabbits, birds, reptiles, and arthropods (Willey 2013). The relative abundance of prey types in Mexican Spotted Owl pellets collected at LANL are listed in Table A-1 in the Appendix. Ganey and Balda (1994) found core areas of individuals (i.e., where owls spent 60 percent of their time) averaged 134 ha (331 ac), and core areas for pairs averaged 160 ha (395 ac).

## **1.3 Threats**

The Mexican Spotted Owl was listed as threatened because of destruction and modification of habitat caused by timber harvest and fires, increased predation on owls associated with habitat fragmentation, and a lack of adequate protective regulations.

## **2.0 IMPACT OF HUMAN ACTIVITIES**

### **2.1 Introduction**

The primary threats to Mexican Spotted Owls on DOE property around LANL property are 1) impacts to habitat quality from LANL operations and 2) disturbance of nesting owls. This section provides a review and summary of scientific knowledge of the effects of various types of human activities on the Mexican Spotted Owl and provides an overview of the current levels of activities at LANL.

### **2.2 Impacts on Habitat Quality**

#### **2.2.1 Development**

The type of habitat used by Mexican Spotted Owls, late seral stage forests with large trees, are usually not found in large quantities near developed areas or near areas that have had recent agricultural or forest product extraction land uses. Therefore, Mexican Spotted Owls are generally not found near developments. Whether it is the development itself or a lack of suitable habitat that discourages colonization of these areas by Mexican Spotted Owls is unknown.

Areas of LANL vary from remote undeveloped areas to heavily developed and/or industrialized facilities. Most LANL facilities are situated atop mesas, primarily in the northern and western portion of the DOE property. LANL is bounded by developed residential, industrial, and retail areas along its northern boundary (the town of Los Alamos) and by residential and retail development along a portion of its eastern boundary (the town of White Rock). Three major paved roads traverse LANL from northeast to southwest. Sandia, Pajarito, and Los Alamos canyons have paved roads within AEIs, and several AEIs have dirt roads along at least a portion of the canyon bottom. AEIs containing paved or dirt roads in the canyon bottoms have not been occupied at LANL (Hathcock et al. 2010).

#### **2.2.2 Ecological Risk**

There is no specific information on the impact of chemicals on the Mexican Spotted Owl, although experience with other raptor species suggests that exposure to polychlorinated biphenyls (PCBs), dichloro-diphenyl-trichloroethane (DDT) and its derivatives, and other organophosphate or organochlorine pesticides would probably be harmful. Exposure to other chemicals could also be harmful (Cain 1988).

LANL completed three ecological risk assessments that included the Mexican Spotted Owl between 1997 and 2009. The ecological risk assessment process involves using computer modeling to assess potential effects to animals from chemicals of potential concern (COPCs) that have been detected in the environment. All of the following ecological risk assessments concluded that, on average, no appreciable impact is expected to Mexican Spotted Owls from COPCs (Gallegos et al. 1997; Gonzales et al. 2004; Gonzales et al. 2009).

### **2.2.3 Disturbance**

#### **2.2.3.1 Pedestrians and Vehicles**

Based on work with other raptors, LANL biological resources SMEs assume that Mexican Spotted Owls would likely be disturbed by the approach of either pedestrians or vehicles. At an equal distance, pedestrians are frequently more disturbing to raptors than vehicles (Grubb and King 1991). Brown and Stevens (1997) reported that during surveys in Grand Canyon National Park, 22 times more Bald Eagles were found in canyon reaches with low human recreational use compared to reaches with moderate to high human recreational use. Human activity 100 m (328 ft) from Bald Eagle nests in Alaska caused clear and consistent changes in behavior of breeding eagles (Steidl and Anthony 2000).

Swarthout and Steidl (2001) found that both juvenile and adult roosting Mexican Spotted Owls were unlikely to alter their behavior in the presence of a single hiker at distances greater than 55 m (180 ft). Swarthout and Steidl (2003) concluded that cumulative effects of high levels of short-duration recreational hiking near Mexican Spotted Owl nests may be detrimental.

Many canyon bottoms and mesa tops at LANL have dirt roads traversing them. Most of these roads are gated. However, these roads are accessible to LANL employees and some of them are accessible to the public on foot or by bike. LANL biological resources SMEs have found that AEIs are occupied less often if there is recreational access into a canyon (Hathcock et al. 2010).

#### **2.2.3.2 Aircraft**

Ground-based disturbances appear to impact raptor reproductive success more than aerial disturbances (Grubb and King 1991). Grubb and Bowerman (1997) concluded that an exclusion of aircraft within 600 m (1,968 ft) of Bald Eagle nest sites would limit Bald Eagle response frequency to 19 percent.

Delaney et al. (1999) found for Mexican Spotted Owls that chainsaws consistently elicited higher response rates than helicopters at similar distances. Owl flush rates did not differ between nesting and non-nesting seasons. No owls flushed when noise stimuli (helicopter or chainsaws) were at distances greater than 105 m (344 ft). Distance was generally a better predictor of owl response to helicopter overflights than sound level.

LANL is restricted airspace, and planes infrequently fly less than 609 m (2,000 ft) above ground level. The County of Los Alamos operates an airport along the northern edge of LANL. The airport is located on the southern rim of Pueblo Canyon. Most flights approach and depart to the east of the airport, over the Rio Grande.

#### **2.2.3.3 Explosives**

There is no specific information on the reaction of Mexican Spotted Owls to explosives detonation currently available. Explosive blasts set off 120 to 140 m (393 to 459 ft) from active Prairie Falcon (*Falco mexicanus*) nests caused perched Prairie Falcons to flush from perches 79 percent of the time, and, in 26 percent of the cases, caused incubating Prairie Falcons to flush from nests. Measured sound levels at aerie entrances during blasts ranged from 129 to 141 decibel (dB) (Holthuijzen et al. 1990). Explosives blasting for dam construction 560 to 1,000 m (1,837 to 3,280 ft) from active Prairie Falcon nests caused a change in behavior 26 percent of the time, and

birds flushed in 17 percent of all cases. No incubating birds flushed (Holthuijzen et al. 1990). Brown et al. (1999) found little activity change in roosting or nesting Bald Eagles and no population-level impacts from weapons detonations at the Aberdeen Proving Ground. Holthuijzen et al. (1990) found that a 167-g (5.89-oz) charge of Kinestik produced noise levels between 138 and 141 dB at 100 m (328 ft), and that a 500-g (17.6-oz) charge of TNT produced noise levels between 144 and 146 dB at 100 m (328 ft). A 20-kg (44-lb) charge of TNT produced noise levels that measured 163 dB at 100 m (328 ft) (Paakkonen 1991).

Measurements of noise levels during explosives testing were conducted at three locations at LANL using quantities of high explosives ranging from 4.5 to 67.5 kg (10 to 148 lb) of TNT during six shots. Noise levels increased during the test from a background level of 31 dB(A)<sup>1</sup> to a range between 64 and 71 dB(A) during shots at a distance of 1.8 km (1.1 mi). At a distance of 4.3 km (2.67 mi), noise levels rose from a background range of 35 to 64 dB(A) to a range of 60 to 63 dB(A) (Vigil 1995). At a distance of 6.7 km (4.16 mi), noise levels rose from a background range of 38 to 51 dB(A) to a range of 60 to 71 dB(A) (Burns 1995). LANL biological resources SMEs estimated that the noise from a shot at the Dual-Axis Radiographic Hydrodynamic Test (DARHT) Facility would be 150 dB(A) at the source and 80 dB(A) at 400 m (1,312 ft) (Keller and Risberg 1995). LANL biological resources SMEs found that Mexican Spotted Owl AEIs located within the explosives testing buffer area were occupied more frequently than AEIs in other locations (Hathcock et al. 2010). This is likely due to the strict access control in explosives areas which limit human activity and development in the canyon bottoms.

#### **2.2.3.4 Other Sources of Noise**

Major noise-producing activities at LANL include automobile and truck traffic and noise associated with office buildings, construction activities, a live-fire range, and explosives testing. Also, there is noise associated with aircraft traffic at the Los Alamos County airport. Construction and maintenance activities involved with operations at LANL are fairly common. In addition, implementation of the 2005 Compliance Order on Consent (NMED 2005) issued by the New Mexico Environmental Department (NMED) has resulted in an increased frequency of drilling groundwater monitoring wells in protected habitat at LANL. Also, forest fuels management operations use chainsaws, chippers, and other noise-generating equipment. The 2010 National Pollutant Discharge Elimination System (NPDES) Individual Permit (EPA 2010) issued by the Environmental Protection Agency (EPA) requires sediment control features such as berms and small rock check dams to be installed at various sites with stormwater runoff; these are sometimes installed in protected habitat. LANL biological resources SMEs conducted a study of noise levels in canyons and found that the primary sources of noise exceeding 55 dB(A) were cars and trucks. Readings taken near flowing water were up to 11 dB(A) higher than readings taken elsewhere. The average dB(A) in canyons near paved roads ranged from 41 to 62, with maximum values ranging from 62 to 74. Away from paved roads 1.6 km (1 mi) or more, average dB(A) in canyons ranged from 37 to 50, with all but one average below 45. Maximum dB(A) away from paved roads ranged from 38 to 76 [76 dB(A) was measured during a thunder clap] (Huchton et al. 1997).

---

<sup>1</sup> Sound can be measured as decibels (dB), C-weighted dB [dB(C)], or A-weighted dB [dB(A)]. The dB(A) measurement best resembles the response of the human ear by filtering out lower and higher frequency sound not normally heard by the human ear.

Noise measurements were conducted by LANL biological resources SMEs at the Los Alamos County airport and in Bayo and Pueblo canyons, including the Los Alamos County Sewage Treatment Facility, in December 1997. Sound levels near the airport runway during the maximum use time (6:30 to 7:30 am) had background values averaging 54 dB(A). Noise during plane arrivals ranged from 47 to 63 dB(A). No measurements were collected during plane take-off. Sound measurements conducted in the bottoms of Pueblo and Bayo canyons ranged from 37 to 40 dB(A) in most areas of the canyon. At the sewage treatment facility parking lot during a working day, the average dB(A) during a three-minute period was 46 (range 45 to 49). At the intersection of the road going into Pueblo Canyon with State Road 502, the average dB(A) during a three-minute period was 60 (range 41 to 70).

LANL biological resources SMEs conducted sound measurements at successive distances from an industrial area near a canyon rim, into the canyon, and to the opposite rim, using a C-weighted decibel scale (Keller and Foxx 1997). Measurements of noise levels using the C-weighted decibel scale are greater than if measured using A-weighted decibels. The average background noise on the mesa was 65.8 dB(C) [with a range of 43–81 dB(C)]. The average background noise in the canyon bottom was 62.3 dB(C) [with a range of 54–78 dB(C)]. The average background noise at the bottom of the north-facing slope was 53.8 dB(C) [with a range of 48–64 dB(C)]. Measurements were taken mid-day.

LANL biological resources SMEs measured sound levels from various pieces of construction equipment used at project sites at LANL over 5-minute intervals at distances of 6 to 31 m (20 to 100 ft) (Knight and Vrooman 1999). Average values ranged from 58.5 dB(A) to 80.9 dB(A). Peak values ranged from 75.7 to 155.4 dB(A). Additional data were collected by other LANL operators on specific pieces of construction equipment and on the Security Computer Complex construction site fence perimeter at Technical Area 3 before and during construction (Knight and Vrooman 1999). The average noise levels before construction began was 56.6 dB(A), and the average during construction was 82.1 dB(A).

LANL biological resources SMEs conducted a series of sound measurements at LANL to investigate background noise levels around AEIs (Vrooman et al. 2000). Background noise levels were significantly higher in daytime than in nighttime. AEIs with greater than 10 percent developed area in their buffers had significantly higher levels of background noise than undeveloped AEIs. Mean background sound levels were 51.3 dB(A) in developed AEIs and 39.6 dB(A) in undeveloped AEIs. The LANL biological resources project review process uses the individual AEI background measurements from Vrooman et al. (2000) to screen project activities for increases more than 6 dB(A) above background.

LANL biological resources SMEs took sound level measurements of heavy equipment use associated with concrete recycling on Sigma Mesa at LANL in 2004 (Hansen 2004). At this location, background noise levels at two different locations were 55.2 and 58.8 dB(A). Operation of a dump truck hauling and dumping concrete increased noise levels above background by a mean of 22.7 dB(A) at 30 m (98 ft) and 2.4 dB(A) at 80 m (262 ft). Additional sound level measurements were taken in the same general area on Sigma Mesa in 2005 as part of a BA for the operation of an asphalt batch plant (Hansen 2005). Measurements were taken on the north rim of Mortandad Canyon (south of the asphalt batch plant at distances of approximately 30 to 122 m (100 to 400 ft), at the bottom of Mortandad Canyon, approximately 183 to 244 m (600 to 800 ft) from the asphalt

batch plant, and on the south rim of Mortandad Canyon approximately 305 m (1,000 ft) from the asphalt batch plant. Background noise levels at the various locations ranged from 41.1 to 48.7 dB(A). The only locations with increases greater than 3 dB(A) during operation of the asphalt batch plant were the locations on the north rim of Mortandad Canyon, within 122 m (400 ft) of the asphalt batch plant. Noise from the operation of the asphalt batch plant was not detected in the bottom of Mortandad Canyon or on the south rim.

LANL biological resources SMEs took sound level measurements around the LANL Biosafety Level 3 (BSL-3) Laboratory with the heating, ventilation, and air conditioning (HVAC) system on and with it off (Hansen 2009). The area to the north of the BSL-3 is developed, the area to the south is not. Background noise levels north of the facility ranged from 53.6 to 57.6 dB(A). Background noise levels south of the facility ranged from 41.6 to 49.7 dB(A). Noise from the HVAC system was detected at 25 m (82 ft) from the facility on both sides, but was not detected at 81 m (266 ft) on the north side, or at 107 m (351 ft) on the south side.

Overall, these studies appear to show that areas adjacent to or within developed areas or paved roads are likely to have daytime average background noise levels between 45 and 63 dB(A). Less disturbed areas are likely to have average background noise levels between 37 and 50 dB(A).

#### **2.2.3.5 Artificially Produced Light**

There is no information available on the effects of artificially produced light on Mexican Spotted Owls. Under the Los Alamos County Code, commercial site development plans are reviewed to ensure that lighting serves the intended use of the site while minimizing adverse impacts to adjacent residential property (Section 16-276). Section 16-276 of the County Code includes light source measurement limitations by zoning district. The code allows off-site light to be 0.5 foot candles (fc) in residential areas. By comparison, full moonlight measures 0.1 fc, and a crescent moon was measured at 0.01 fc. Table A-2 in the Appendix presents preliminary light measurements in fc.

Preliminary surveys were conducted for light levels within Los Alamos Canyon at the Omega Reactor (Keller and Foxx 1997). The Omega Reactor was brightly lit for purposes of security; therefore, total light intensity was greater than the average street lighting. Measurements were conducted at a light pole with an open parking lot at the reactor as the source. Trees did not obscure the area. Using the relationship of light intensity reducing as a square of the distance, calculations using the field data indicated that at 30 m (98 ft) from the source the light levels would be equivalent or nearly equivalent to full moonlight.

### **3.0 AEI GENERAL DESCRIPTION FOR MEXICAN SPOTTED OWL**

An AEI consists of two areas—a core and a buffer. The core of the habitat is defined as suitable canyon habitat from rim to rim and 100 m (328 ft) out from the top of the canyon rim. The buffer area is 400 m (1,312 ft) wide extending outward from the edge of the core area. Although adult Mexican Spotted Owls may be found within their home range anytime throughout the year, the primary threat from disturbance to the owls is during the breeding season when owl pairs are tied to their nest sites. Therefore, management of disturbance in Mexican Spotted Owl AEIs is concentrated on the breeding season.

### **3.1 Method for Identifying a Mexican Spotted Owl AEI**

The original location of each Mexican Spotted Owl AEI was identified using a habitat model developed by Johnson (1998) that classified nesting and roosting habitat for Mexican Spotted Owls using topographic characteristics and vegetative diversity. LANL biological resources SMEs compared the results from the Johnson (1998) model to a different model identifying slopes >40 percent in mixed conifer and ponderosa pine cover types at LANL. Areas identified from the Johnson (1998) model application to LANL that were over five contiguous 30 × 30 m (97 × 98 ft) pixels in size, were above 1,980 m (6,496 ft) in elevation, and that had mixed conifer or ponderosa pine forest cover, were considered suitable Mexican Spotted Owl habitat. Where suitable habitat was identified, AEI core area boundaries were established to include the canyons and 100 m (328 ft) outward from the canyon rims.

A new Mexican Spotted Owl habitat model was developed and refined for application on LANL following the Cerro Grande wildfire (Hathcock and Haarmann 2008). This model incorporated finer-scale vegetation characteristics into the Mexican Spotted Owl habitat quality assessment. This model was used to redelineate the boundaries of the Mexican Spotted Owl AEIs at LANL in 2005 following wildfire, drought, and a regional bark beetle outbreak (USFWS consultation number 22420-2006-I-0010).

The new core boundaries were delineated with an area approximately 0.4 km (0.25 mi) from the edge of the nearest suitable habitat, up and down canyon. Core boundaries were established along readily recognizable geologic features or anthropogenic features in the terrain wherever possible to facilitate the ease of identification of core boundaries when in the field.

### **3.2 Location and Number of Mexican Spotted Owl AEIs**

There are currently five Mexican Spotted Owl AEIs on LANL, each encompassing one or more canyons. In general, the AEI cores are centered in canyons on the western side of LANL. The canyons with AEIs are Cañon de Valle, Water, Pajarito, Los Alamos, Sandia, Mortandad, and Three-Mile. AEI boundaries are maintained in the LANL biological resources program GIS database.

## **4.0 AEI MANAGEMENT**

### **4.1 Overview**

This AEI management section provides guidelines for LANL operations to reduce or eliminate the threats to Mexican Spotted Owls from 1) habitat alterations that reduce habitat quality and 2) disturbance of breeding or potentially breeding owls. Habitat alterations are considered for all AEIs and for both core and buffer areas. Disturbance activities to owls are considered only for occupied AEIs and only for impacts on core areas. Developed areas (see Part I, Section 3.1) that have ongoing baseline levels of activities and are not suitable habitat for Mexican Spotted Owls have different restrictions than undeveloped core or buffer areas. Therefore, the location of the disturbance activity within the AEI, the occupancy status of the AEI, and the type of activity all affect whether or not the activity is allowable. AEIs for different species may overlap, and an activity must meet the guidelines of all applicable site plans to be allowable.

## 4.2 Definition and Role of Occupancy in AEI Management

**Summary:** The occupancy status of an AEI affects what disturbance activities are allowable in different areas (core, buffer, developed) of the AEI. All Mexican Spotted Owl AEIs are considered occupied during March 1 through August 31 or until surveys show the AEI to be unoccupied. See the Activity Table (Table 1, Section 4.5.2) for restrictions on occupied undeveloped core and buffer areas, and Part I, Section 3.1 for restrictions on developed areas.

Occupancy simply refers to whether or not an AEI is occupied during a species' period of sensitivity. For Mexican Spotted Owls, LANL is primarily concerned with protecting the owls from disturbance during the breeding season. Because individuals may colonize suitable habitat, all Mexican Spotted Owl AEIs are treated as though they are occupied from March 1 through August 31 or until surveys show an AEI to be unoccupied. Mexican Spotted Owl surveys are conducted from late March through June. In general, surveys in areas with ongoing or proposed projects are completed by May 15. If a nest is located during surveys, then the AEI can be treated as unoccupied except for the area within a 400 m (1,312 ft) radius of the nest site. Because owls are not as sensitive to disturbance during the non-breeding season, Mexican Spotted Owl AEIs are treated as unoccupied from September 1 to February 28.

The occupancy status of an AEI affects what activities are allowable in the AEI. Although activities causing habitat alterations are restricted in all AEIs, disturbance activities are restricted only in occupied AEIs. The Activity Table (Table 1, Section 4.5.2) provides dates and levels of allowable disturbance activities within occupied Mexican Spotted Owl AEIs under the guidelines of this site plan. Contact a LANL biological resources SME to find out the current occupancy status of an AEI (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

## 4.3 Introduction to AEI Management Guidelines

**Summary:** The habitat alterations section and the activities section give the guidelines for habitat alteration and disturbance activities, respectively, for Mexican Spotted Owl AEIs. The flow chart (see Figure 1) provides a quick reference to determine what, if any, guidelines need to be consulted for a specific activity. Protective measures give management practices that should be applied when working or considering work in AEIs. LANL biological resources SMEs are available to answer questions and provide advice (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

Sections 4.4 and 4.5 provide the guidelines for habitat alterations and allowable activities in AEI core and buffer areas. Section 4.4 describes what and where habitat alterations are allowed under the guidelines of this site plan. Section 4.5 describes what, when, and where disturbance activities are allowed in occupied AEIs under the guidelines of this site plan. If an activity does not meet the restrictions given in the guidelines, the activity must be individually reviewed for ESA compliance. This site plan only provides guidelines for Mexican Spotted Owl AEIs. If an activity is desired in an area with overlapping AEIs, all applicable site plans must be consulted. AEI maps show the location of all AEIs in an area. Section 4.6 describes management practices that should be applied when working or considering work in an AEI. LANL biological resources SMEs are available to answer questions and provide advice (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

## **4.4 Definition of and Restrictions on Habitat Alterations**

### **4.4.1 Definition of Habitat Alterations**

Habitat alteration includes any action that alters the soil structure, vegetative components necessary to the species, prey quality and quantity, water quality, hydrology, or noise or light levels in undeveloped areas of an AEI. Long-term means the alteration lasts for more than one year. For physical disturbances, in general, any activity that can be accomplished by one person with a hand tool is generally not considered habitat alteration; any activity that requires mechanized equipment on a landscape is habitat alteration. An actual activity may take place outside of the AEI and will be considered habitat alteration if consequences of the activity have effects inside the AEI core.

The habitat components most important to Mexican Spotted Owls include vegetative structure, food quality and quantity, and disturbance levels, including noise and light. The forest structure within a canyon designated as a Mexican Spotted Owl AEI is important because it provides roost sites and a suitable habitat for nesting and foraging. Trees along the canyon rim are used for foraging and territorial calling, and they shelter the canyon interior from light and noise disturbances.

A long-term change in light or noise levels within the undeveloped core of an AEI is considered to be a habitat alteration if it increases average noise levels by  $\geq 6$  dB(A) during any portion of the 24-hour day, or it increases average light levels by  $\geq 0.05$  fc at night. Changes in noise and light levels are measured at the core area boundary if the source is outside the core area, or at 10 m (33 ft) from the source if the source is inside the undeveloped core area. Impacts of changes in developed areas on undeveloped cores are measured at the developed area boundary if it is within the core, or at the core area boundary if the developed area is outside of the core.

### **4.4.2 Fuels Management Practices to Reduce Wildfire Risk**

The recovery plan for the Mexican Spotted Owl lists stand-replacing wildfires as a primary threat to their habitat and encourages land managers to reduce fuel levels and abate fire risks in ways compatible with owl presence on the landscape (USFWS 1995). Within undeveloped core areas, on slopes  $>40$  percent, in the bottoms of steep canyons, and within 30 m (100 ft) of a canyon rim, thinning of trees  $<22$  cm (9 in) diameter at breast height, treatment of fuels, and prescribed and natural prescribed fires are allowed. Exceptions allowing trees  $>22$  cm (9 in) to be thinned within 30 m (100 ft) of buildings are granted to protect facilities. Large logs ( $>30$  cm [11.8 in] midpoint diameter) and snags should be retained. Thinning within core areas not meeting the characteristics listed above, and in buffer areas, may include trees of any size to achieve 8 m (25 ft) spacing between tree crowns. However, clear cutting is not allowed in undeveloped core areas.

For health and safety reasons, any trees within 30 m (100 ft) of buildings, but outside a developed area, may be thinned to achieve 8 m (25 ft) spacing between crowns. Habitat alterations including thinning are not restricted in developed areas. However, LANL biological resources SMEs encourage the retention of trees and snags along canyon rims if the rim is in a developed area. Because of the extreme fire danger associated with firing sites and the potential impact of a fire on Mexican Spotted Owl habitat, firing sites and burn areas are treated separately for the purposes of fuels management. Trees within 380 m (1,246 ft) of firing sites and burn areas in both core and

buffer areas may be thinned to a 15 m (49 ft) spacing between trees everywhere except on slopes >40 percent or in the bottoms of steep canyons. Any tree over 22 cm (9 in) diameter at breast height within 380 m (1,246 ft) of a firing site may be delimbed to a height of 2 m (6 ft) to help prevent crown fires.

In historically occupied core areas, fuels treatment may not exceed 10 percent of the undeveloped core area and is not allowed within 400 m (1,312 ft) of nesting areas. In occupied core areas, forest management activities must take place during the nonbreeding season (September 1 to February 28) (USFWS 1995). Fuels management activities that are allowable in core areas have to be reported to LANL biological resources SMEs for tracking.

#### **4.4.3 Utility Corridors**

Habitat alterations such as cutting down trees that threaten power lines are allowed within 8 m (26 ft) of either side of an existing utility line in all areas of an AEI (Trujillo and Racinez 1995). New utility lines and utility lines requiring clearance of a right-of-way greater than 16 m (52 ft) total must be individually reviewed for ESA compliance. Disturbance activities must follow the guidelines given in the Activities Table (Table 1, Section 4.5.2) for occupied AEIs.

#### **4.4.4 Restrictions on Habitat Alterations**

**Summary:** Habitat alterations other than fuels management practices and utility corridor maintenance are not allowed in undeveloped core areas. Habitat alterations in buffer areas are restricted to 2 ha (5 ac) per project, with a maximum cap on development in the buffer for each AEI. Habitat alterations other than fuels management and utility corridor maintenance must be reported to LANL biological resources SMEs for tracking (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

Habitat alterations other than the fuels management practices and utility corridor maintenance described above are not allowed in undeveloped core areas under the guidelines of this site plan. If a project or activity is planned that would alter habitat in an undeveloped core area, it must be individually evaluated for ESA compliance. Habitat alterations in undeveloped buffer areas other than the fuels management activities and utility corridor maintenance described above are restricted to 2 ha (5 ac) in area per project and are subject to other restrictions including light and noise effects in the core (see Section 2.2.3). Projects in the buffer over 2 ha (5 ac) in size will require individual ESA compliance review.

Habitat alterations in a buffer area other than the fuels management and utility corridor maintenance described above must be reported to LANL's biological resources SMEs for tracking (<http://int.lanl.gov/environment/bio/controls/index.shtml>). There is a cumulative maximum area that can be developed in each AEI's buffer. Once that cumulative area is reached, all habitat alterations in a buffer will require individual ESA reviews for compliance.

### **4.5 Definition of and Restrictions on Disturbance Activities**

#### **4.5.1 Definitions of Disturbance Activities**

LANL biological resources SMEs considered six categories of activities that might cause disturbance in an AEI. Most of the categories were first identified in the document "Peregrine

Falcon Habitat Management in the National Forests of New Mexico,” prepared for the United States Forest Service (Johnson 1994). LANL biological resources SMEs added explosives detonation, other light production, and other noise production to provide the most comprehensive list of activities possible, thereby reducing the need for individual review of activities for ESA compliance. The categories of activities are people, vehicles, aircraft, other light production, other noise production, and explosives detonation. LANL biological resources SMEs have defined low, medium, and high levels of impact for these activities except for explosives detonation. Activity levels for explosives detonation have been designed to follow the guidelines agreed upon by LANL, DOE, and USFWS in the DARHT BA (Keller and Risberg 1995). Restrictions on explosives detonation are described in the definition of the activity, but are not included in the Activity Table (Table 1, Section 4.5.2). These six categories of activities are restricted only in AEIs that are classified as occupied.

**People**—includes any entry of people into an AEI on foot.

- Low impact is the presence of three or fewer people per project and duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of people or the duration criteria.
- High impact is the exceedance of both the number of people and the duration criteria.

**Vehicles**—includes the entry of any two-axle highway vehicle, all-terrain vehicle, or motorized machinery into an AEI by any route other than a paved road or an improved gravel road.

- Low impact is the presence of two or fewer vehicles per project and duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of vehicles or the duration criteria.
- High impact is the exceedance of both the number of vehicles and the duration criteria.

**Aircraft**—includes the operation of any aircraft below an elevation of 600 m (2,000 ft) above the highest ground level in the local vicinity.

- Low impact is the presence of one single-engine airplane and the duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of aircraft or the duration criteria.
- High impact is the exceedance of both the number of aircraft and the duration criteria.

Any use of helicopters, jet airplanes, and propeller airplanes with two or more engines is classified as medium impact or above, depending on duration.

**Other Light Production**—includes any activity not previously listed that causes additional light to occur in an AEI core area. For example, plans for construction of a new building at the edge of a developed area may call for lighting at night to facilitate nighttime work that impacts an undeveloped core area.

- Low impact is the increase of light intensity by  $\leq 0.05$  fc and a duration of one night or less per project per breeding season.
- Medium impact is the exceedance of either the intensity or duration criteria.
- High impact is the exceedance of both the intensity and duration criteria.

Measurements for increases in light are taken at the AEI core area boundary closest to the light source if the source is outside the core and at 10 m (33 ft) from the source if the source is inside the core. Light measurements for developed areas are taken at the edge of the developed area if the developed area is within an AEI core or at the closest core boundary if the developed area is outside of an AEI core.

**Other Noise Production**—includes any activity not previously listed except for explosives detonation that causes additional noise to occur in an AEI. For example, operation of machinery creates noise.

- Low impact is increasing noise levels in an AEI core by 6 dB(A) or less for one day or less per project per breeding season.
- Medium impact is the exceedance of either the level or the duration criteria.
- High impact is the exceedance of both the level and the duration criteria.

Measurements for increases in noise are taken at the AEI core boundary closest to the noise source if the source is outside the core and at 10 m (33 ft) from the source if the source is inside the core. Noise measurements for developed areas are taken at the edge of the developed area if the developed area is within an AEI core or at the closest core boundary if the developed area is outside of an AEI core.

**Explosives Detonation**—includes the use of high explosives for any purpose. LANL biological resources SMEs did not define low, medium, and high levels of this activity because of the difficulty of determining levels for a shot before actually doing the shot. For the purpose of explosives detonation near Mexican Spotted Owl AEIs, occupied habitat is defined as the area within 400 m (1,312 ft) of the current year's nest/roost sites or the previous year's nest site if a current site has not been identified. No explosives detonation will take place within 400 m (1,312 ft) of nest/roost sites in occupied habitat between March 1 and August 31. Explosives detonation at night at sites within 400 to 800 m (1,312 to 2,624 ft) of a nest site in occupied habitat is restricted to once a month from March 1 and August 31. There are no restrictions on daytime explosives testing between 400 and 800 m (1,312 to 2,624 ft). There are no restrictions between September 1 and February 28 or in unoccupied habitat. Explosives detonation adjacent to AEIs that have not previously been recorded by LANL as occupied will have no restrictions unless surveys detect Mexican Spotted Owls. Explosives tests not allowed under the guidelines of this site plan must be individually reviewed for ESA compliance.

#### **4.5.2 Activity Table**

The dates shown in the Activity Table (Table 1) are the dates between which the activity in the row is restricted under the guidelines of this site plan. All AEIs are considered occupied from March 1 to August 31 or until surveys show an AEI to be unoccupied. If owls are detected, AEIs

are considered occupied until August 31 within 400 m (1,312 ft) of the nest site. Consult with LANL biological resources SMEs to find out occupancy status of AEIs and what locations are within 400 m (1,312 ft) of nest sites (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

**Table 1. Restrictions on Activities in Undeveloped Occupied Mexican Spotted Owl AEIs**

	<b>Core</b>	<b>Buffer</b>
<i>People</i>		
Low	No Restrictions*	No Restrictions
Medium	March 1 to August 31	No Restrictions
High	March 1 to August 31	No Restrictions
<i>Vehicles</i>		
Low	No Restrictions	No Restrictions
Medium	March 1 to August 31	No Restrictions
High	March 1 to August 31	No Restrictions
<i>Aircraft</i>		
Low	March 1 to August 31	No Restrictions
Medium	March 1 to August 31	March 1 to May 15
High	March 1 to August 31	March 1 to August 31
<i>Other Light Production</i>		
Low	March 1 to August 31	No Restrictions**
Medium	March 1 to August 31	No Restrictions**
High	March 1 to August 31	No Restrictions**
<i>Other Noise Production</i>		
Low	March 1 to August 31	No Restrictions**
Medium	March 1 to August 31	No Restrictions**
High	March 1 to August 31	No Restrictions**
<i>Explosives Detonation (see text in Section 4.5.1)</i>		

\*Entry is restricted in core areas that are occupied within 400 m (1,312 ft) of the nest site from March 1 to August 31. If the current nest has not been located, entry is restricted within 400 m (1,312 ft) of the previous year's nest site.

\*\*Noise or light production in the buffer is restricted if the activity would violate core area restrictions on noise or light.

## 4.6 Protective Measures

**Summary:** This section provides a list of management practices to apply in Mexican Spotted Owl AEIs.

- Timing of projects must take into account that projects in core areas or projects that violate restrictions for occupied buffer areas must stop on February 28 each year until occupancy status of the AEI is determined.
- Every reasonable effort should be made to reduce the noise from explosives testing within 800 m (2,624 ft) of occupied habitat. Methods to reduce noise could include contained shots, noise shields in the direction of AEI cores, etc. For night shots, every reasonable effort should be made to limit the amount of light directed into AEI core areas.

- Put signs on dirt roads and trails leading into AEIs labeling them as restricted access areas and providing a number to contact for access restrictions.
- Keep disturbance and noise to a minimum.
- Avoid unnecessary disturbance to vegetation (e.g., excessive parking areas or equipment storage areas, off-road travel, materials storage areas, crossing of streams or washes).
- Avoid removal of vegetation along drainage systems and stream channels.
- Avoid all vegetation removals not absolutely necessary.
- Appropriate erosion and runoff controls should be employed to reduce soil loss. The controls must be put in place and periodically checked throughout the life of projects.
- All exposed soils must be revegetated as soon as feasible after construction to minimize erosion.
- In the Los Alamos Canyon AEI, development should be focused away from undeveloped areas on the western end of the AEI.

## 5.0 LEVELS OF DEVELOPMENT IN AEI CORE AND BUFFERS

### 5.1 Allowable Habitat Alteration in the Buffer Areas

The following quantifications of development and guidance for allowable habitat alteration in buffer areas were published and consulted on in the 1999 version of the HMP. Most AEIs changed in dimensions during the 2005 redelination of the habitats, and many have experienced additional development. Development in buffer habitat was not addressed during the 2005 consultation. Many projects were reviewed and received USFWS concurrence between 1999 and 2014.

LANL biological resources SMEs have provided the current development status for each of the AEIs at the end of each paragraph. The percent developed numbers were derived with the original size of the AEIs.

***Cañon de Valle***—In 1999, 16.3 ha (40.3 ac, 2.9 percent) of the core was developed and 52.2 ha (129 ac, 6.8 percent) of the DOE-controlled buffer was developed. For this AEI, it was recommended that only an additional 25.30 ha (62.5 ac) of the AEI buffer be developed. The 1999 HMP stated that once this cap is reached or a large-scale project is proposed, additional consultation with USFWS would be required. By 2011, 28 ha (69.2 ac) of the core and 84 ha (207.5 ac) of the buffer had been developed.

***Pajarito***—In 1999, there were 6.7 ha (16.5 ac, 5.5 percent) of the core developed and 75.1 ha (186.5 ac, 16.7percent) developed in the buffer. LANL biological resources SMEs recommended only an additional 35 ha (86.4 ac) of the buffer be developed before additional USFWS consultations take place. The 1999 HMP stated that once the cap is reached or a single large-scale project is proposed, additional consultation would be required. By 2011, 27 ha (66.7 ac) of the core and 89 ha (220 ac) of the buffer had been developed.

***Los Alamos***—In 1999, there were 77.16 ha (190 ac) of the core developed and 167.2 ha (413.1 ac) developed in the buffer. For this AEI, LANL biological resources SMEs recommended only an

additional 28.6 ha (70.6 ac, 5.9 percent) of the DOE-owned buffer be developed before additional USFWS consultations take place.

Because this AEI is so heavily developed, additional development was restricted to a few selected areas within the buffer. Development outside of these areas requires individual review for ESA compliance. A large percentage of this AEI was removed in the 2005 and 2013 BAs. By 2011, 94 ha (232.2 ac) of the core and 181 ha (447.3 ac) of the buffer had been developed.

***Sandia-Mortandad***—In 1999, 98.4 ha (243.2 ac) of this AEI on DOE lands were developed, including 29 ha (71.7 ac, 10.7 percent) of the core and 75.1 ha (185.6 ac, 16.7 percent) of the buffer. For this AEI, LANL biological resources SMEs recommended only an additional 38.1 ha (94.1 ac) of the buffer be developed before additional USFWS consultations take place. Once this cap is reached or a single large-scale project is proposed, additional consultation will be required. By 2011, 45 ha (111.2 ac) of the core and 83 ha (205.1 ac) of the buffer had been developed.

***Three Mile***—In 1999, 25.3 ha (62.5 ac) of this AEI on DOE lands were developed, including 3.8 ha (9.4 ac, 2.8 percent) of the core and 21.5 ha (51.1 ac, 7.3 percent) of the buffer. For this AEI, LANL biological resources SMEs recommended only 64.3 ha (158.8 ac) additional area of buffer be developed before additional USFWS consultations take place. Once this cap is reached or a single large-scale project is proposed, additional consultation will be required. By 2011, 12 ha (29.6 ac) of the core and 37 ha (91.4 ac) of the buffer had been developed.

### **III. AREA OF ENVIRONMENTAL INTEREST SITE PLAN FOR THE SOUTHWESTERN WILLOW FLYCATCHER**

#### **1.0 SPECIES DESCRIPTION—SOUTHWESTERN WILLOW FLYCATCHER**

##### **1.1 Status**

In 1995, the USFWS designated the Southwestern Willow Flycatcher as a federally endangered species (60 FR 10693). The USFWS most recently designated critical habitat for the Southwestern Willow Flycatcher in 2005 (70 FR 60885). The most recent recovery plan was published for Southwestern Willow Flycatcher in 2002 (USFWS 2002).

##### **1.2 General Biology**

The Southwestern Willow Flycatcher is one of four subspecies of the Willow Flycatcher. The historic range of the Southwestern Willow Flycatcher included Arizona, California, Colorado, New Mexico, Texas, Utah, and Mexico. Currently, this flycatcher breeds in riparian habitats from southern California to Arizona and New Mexico, plus southern Colorado, Utah, Nevada, and far western Texas. In winter it is found in southern Mexico, Central America, and northern South America (USFWS 2002).

Southwestern Willow Flycatchers are present in New Mexico from early May through mid-September and breed from late May through late July (Finch and Kelly 1999; USFWS 2002; Yong and Finch 1997). The flycatcher's nesting cycle is approximately 28 days. Three or four eggs are laid at one-day intervals, and incubation begins when the clutch is complete. The female incubates eggs for approximately 12 days, and the young fledge about 13 days after hatching.

Southwestern Willow Flycatchers typically raise one brood per year (USFWS 2002). Because arrival dates vary, northbound migrant Willow Flycatchers (of all subspecies) pass through areas where Southwestern Willow Flycatchers have already begun nesting. Similarly, southbound migrants (of all subspecies) in late July and August may occur where Southwestern Willow Flycatchers are still breeding. Therefore, it is only during a short period of the breeding season (approximately June 15 through July 20) that one can assume that a Willow Flycatcher seen within Southwestern Willow Flycatcher range is probably of that subspecies (USFWS 2002).

The Southwestern Willow Flycatcher only nests along rivers, streams, and other wetlands. It is found in close association with dense stands of willows (*Salix* spp.), arrowweed (*Pluchea* spp.), buttonbush (*Cephalanthus* spp.), tamarisk (*Tamarix* spp.), Russian olive (*Eleagnus angustifolia* L.), and other riparian vegetation, often with a scattered overstory of cottonwood (*Populus* spp.) (USFWS 2002). The size of vegetation patches or habitat mosaics used by Southwestern Willow Flycatchers varies considerably and ranges from as small as 0.8 ha (1.9 ac) to several hundred hectares (Hatten and Paradzick 2003). The Southwestern Willow Flycatcher nests in thickets of trees and shrubs approximately 2 to 15 m (6 to 49 ft) tall, with a high percentage of canopy cover and dense foliage from 0 to 4 m (0 to 13 ft) above ground. Regardless of the plant species composition or height, occupied sites always have dense vegetation in the patch interior (Allison et al. 2003; USFWS 2002).

The Southwestern Willow Flycatcher is an insectivore. It forages within and occasionally above dense riparian vegetation, taking insects on the wing and gleaning them from foliage. The flycatcher's prey includes flies, bees, wasps, ants, beetles, moths, butterflies, grasshoppers, crickets, dragonflies, damselflies, and spiders (Durst et al. 2008; Wiesenborn and Heydon 2007).

### **1.3 Threats**

The current population of Southwestern Willow Flycatchers in the United States is estimated at 1,214 territories (Durst et al. 2006). The distribution of breeding groups is highly fragmented, with groups often separated by considerable distances. This subspecies has suffered declines attributed to extensive loss of its cottonwood-willow habitat and to poor productivity resulting from brood parasitism by Brown-headed Cowbirds (*Molothrus ater*) (USFWS 2002).

## **2.0 IMPACT OF HUMAN ACTIVITIES**

### **2.1 Introduction**

The primary threats to the Southwestern Willow Flycatcher on LANL property are 1) impacts on habitat quality from LANL operations and 2) disturbance of nesting flycatchers. This section includes a review and summary of the known effects of various types of human activities to the Southwestern Willow Flycatcher and an overview of the current levels of activities at LANL within species habitat.

### **2.2 Impacts on Habitat Quality**

#### **2.2.1 Development**

Throughout the Southwest, riparian habitats are rare and tend to be small and separated by vast expanses of arid lands. The Southwestern Willow Flycatcher has experienced extensive loss and

modification of its habitat resulting from urban and agricultural development, water diversion and impoundment, channelization of waterways, livestock grazing, off-road vehicle and other recreational uses, and hydrological changes resulting from these and other land uses (USFWS 2002). River and stream impoundments, groundwater pumping, and overuse of riparian areas have altered as much as 90 percent of the Southwestern Willow Flycatcher's habitat (USFWS 2002). Loss of cottonwood-willow riparian forests has had widespread impact on the distribution and abundance of bird species associated with that forest. Development itself may be tolerated if the habitat is left intact.

Because watercourses at LANL tend to be intermittent to ephemeral, riparian habitat is uncommon. There has been extensive degradation of the riparian zone along the Rio Grande caused by feral cattle grazing and flood control operations of Cochiti Lake. There are other riparian/wetland areas on LANL associated with canyon bottoms, the most significant one being Pajarito wetlands in the lower end of Pajarito Canyon. A major paved road traverses the wetlands area in Pajarito Canyon.

### **2.2.2 Ecological Risk**

There is no specific information on the impact of chemicals on Southwestern Willow Flycatcher.

#### **2.2.2.1 Ecorisk Assessment**

LANL completed two ecological risk assessments that included the Southwestern Willow Flycatcher between 1997 and 2009. The ecological risk assessment process involves using computer modeling to assess potential effects to animals from COPCs that have been detected in the environment. The ecological risk assessments concluded that, in general, there is a small potential for effects to Southwestern Willow Flycatcher from COPCs (Gonzales et al. 1998; Gonzales et al. 2009).

An ecotoxicological risk assessment for the Southwestern Willow Flycatcher, centered on the Pajarito wetlands, found that between 7 and 16 percent of 100 hypothetical nest sites examined had hazard indices  $>1.0$  and  $<10.0$ , depending on the foraging scenario (Gonzales et al. 1998). This indicates a small potential for impacts from chemicals. The primary chemicals driving the risk scenario were pentachlorophenol, aluminum, radium-226, calcium, and thorium-228. Aluminum, radium, and thorium are naturally occurring substances in northern New Mexico.

### **2.2.3 Disturbance**

#### **2.2.3.1 Pedestrians and Vehicles**

There is no specific information on the reactions of Southwestern Willow Flycatchers to pedestrians and vehicles available. The recovery plan for the Southwestern Willow Flycatcher recommends providing protected areas, reducing unpredictable activities providing visual barriers, and reducing noise disturbance (USFWS 2002).

#### **2.2.3.2 Aircraft**

There is no specific information on the reaction of Southwestern Willow Flycatchers to aircraft available.

LANL lies within restricted airspace and planes infrequently fly less than 609 m (2,000 ft) above ground level. The County of Los Alamos operates an airport along the northern edge of LANL. The airport is located on the southern rim of Pueblo Canyon. Most flights approach and depart to the east of the airport, over the Rio Grande.

### **2.2.3.3 Explosives**

There is no specific information on the reaction of Southwestern Willow Flycatchers to explosives detonation available. The Southwestern Willow Flycatcher AEI is not located close to any explosives testing sites at LANL.

### **2.2.3.4 Other Sources of Noise**

LANL biological resources SMEs do not have good information on the effects of noise, including machinery operation, on Southwestern Willow Flycatchers. However, Southwestern Willow Flycatchers are probably not as sensitive to disturbance as some other threatened or endangered species (USFWS 2002). For a description of noise levels at LANL, see Part I, Section 2.2.3.

### **2.2.3.5 Artificially Produced Light**

There is no information on the effects of artificially produced light on Southwestern Willow Flycatchers available. Under the Los Alamos County Code, commercial site development plans are reviewed to ensure that lighting serves the intended use of the site while minimizing adverse impacts to adjacent residential property (Section 16-276). Section 16-276 of the County Code includes light source measurement limitations by zoning district. The code allows off-site light to be 0.5 fc in residential areas. By comparison, full moonlight measures 0.1 fc, and a crescent moon was measured at 0.01 fc.

## **3.0 AEI GENERAL DESCRIPTION FOR SOUTHWESTERN WILLOW FLYCATCHER**

The AEI consists of two types of areas—core and buffer. Core areas represent wetland areas with suitable vegetation for nesting, primarily dense willows. The buffer area is the area within 100 m (328 ft) of core areas. The Southwestern Willow Flycatcher AEI on LANL consists of two separate core areas. For purposes of this site plan, both core areas and associated buffers are considered one AEI unit.

### **3.1 Method for Identifying the Southwestern Willow Flycatcher AEI**

The core areas were defined by the presence of riparian habitat and suitable wetland vegetation. These areas were identified in 1994 during a survey of wetlands at LANL and mapped using a global positioning system receiver. Wetlands without stands of dense willows at least 2 m (7 ft) tall and 30 m (98 ft) wide were not included in the AEI. The buffer area is the area within 100 m (328 ft) of the core areas.

### **3.2 Location of the Southwestern Willow Flycatcher AEI**

LANL has one AEI for Southwestern Willow Flycatcher. It is composed of two core areas with associated buffers. The AEI core areas are located in the bottom of Pajarito Canyon, on the eastern side of LANL adjacent to Pajarito Road and State Road 4. The boundaries of the Southwestern

Willow Flycatcher AEI are maintained in the biological resources program GIS database at LANL.

## **4.0 AEI MANAGEMENT**

### **4.1 Overview**

This AEI management section provides guidelines for LANL operations to reduce or eliminate the threats to the Southwestern Willow Flycatcher from 1) habitat alterations that reduce habitat quality and 2) disturbance of breeding or potentially breeding flycatchers. Habitat alterations are considered for all AEIs and for both core and buffer areas. Disturbance activities to flycatchers are considered only for occupied AEIs and only for impacts on core areas. Developed areas (see Part I, Section 2.3) with ongoing baseline levels of activities and are not suitable habitat for Southwestern Willow Flycatchers have different restrictions than undeveloped core or buffer areas. Therefore, the location of the disturbance activity within the AEI, the occupancy status of the AEI, and the type of activity all affect whether or not the activity is allowable. AEIs for different species may overlap, and an activity must meet the guidelines of all applicable site plans to be allowable. Protective measures are described as management practices that should be followed when working in AEIs.

### **4.2 Definition and Role of Occupancy in AEI Management**

**Summary:** The occupancy status of an AEI affects what disturbance activities are allowable in different areas (core, buffer, developed) of the AEI. The Southwestern Willow Flycatcher AEI is considered occupied during May 15 through September 15 or until the surveys show the AEI to be unoccupied. See the Activity Table (Table 2, Section 4.5.2) for restrictions on occupied undeveloped core and buffer areas, and Part I, Section 2.3 for restrictions on developed areas.

Occupancy simply refers to whether or not an AEI is occupied during a species' period of sensitivity. For Southwestern Willow Flycatchers, LANL biological resources SMEs are primarily concerned with protecting the birds from disturbance during the breeding season. Because individuals may colonize suitable habitat, the Southwestern Willow Flycatcher AEI is treated as though it is occupied from May 15 through September 15 or until surveys show an AEI to be unoccupied. Southwestern Willow Flycatcher surveys are conducted during May, June, and July. Because Southwestern Willow Flycatchers migrate south for the winter, the AEI is treated as unoccupied from September 16 to May 14.

The occupancy status of an AEI affects what activities are allowable in the AEI. Although activities causing habitat alterations are always restricted, disturbance activities are restricted only in occupied AEIs. Table 2 provides dates and levels of disturbance activities allowable in the occupied Southwestern Willow Flycatcher AEI under the guidelines of this site plan. The dates in Table 2 indicate the time period during which the activity is restricted. Contact a LANL biological resources SME to find out the current occupancy status of an AEI (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

### **4.3 Introduction to AEI Management Guidelines**

**Summary:** The habitat alterations section (Section 4.4) and the activities section (Section 4.5) gives the guidelines for habitat alteration and disturbance activities, respectively, for the

Southwestern Willow Flycatcher AEI. The flow chart (see Figure 1) provides a quick reference to determine what, if any, guidelines need to be consulted for a specific activity. Protective measures give management practices that should be applied when working or considering work in AEIs. LANL biological resources SMEs are available to answer questions and provide advice (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

Sections 4.4 and 4.5 provide the guidelines for habitat alterations and allowable activities in AEI core and buffer areas. The flow chart (see Figure 1) provides a quick reference that should be used to determine whether a project or activity will affect an AEI and what sections of the site plan need to be consulted. The section on habitat alterations (Section 4.4) describes what and where habitat alterations are allowed under the guidelines of this site plan. The section and table on allowable activities (Section 4.5 and Table 2) describe what, when, and where disturbance activities are allowed in occupied AEIs under the guidelines of this site plan. If an activity does not meet the restrictions given in the guidelines, the activity must be individually reviewed for ESA compliance. This site plan only provides guidelines for the Southwestern Willow Flycatcher AEI. If an activity is desired in an area with overlapping AEIs, all applicable site plans must be consulted. Section 4.6 describes management practices that should be applied when working or considering work in an AEI. LANL biological resources SMEs are available to help interpret site plans and answer questions (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

#### **4.4 Definition of and Restrictions on Habitat Alterations**

##### **4.4.1 Definition of Habitat Alterations**

Habitat alteration includes any action that alters over the long-term the soil structure, vegetative components necessary to the species, prey quality and quantity, water quality, hydrology, or noise or light levels in undeveloped areas of an AEI. Long-term means the alteration lasts for more than one year. Habitat alteration includes any activity that removes vegetative components important to the Southwestern Willow Flycatcher (primarily trees and shrubs). An actual activity may take place outside of the AEI and will be considered habitat alteration if consequences of the activity have effects inside the AEI core.

The habitat components most important to flycatchers include vegetative structure, food quality and quantity, and disturbance levels, including noise and light. The thickets of certain trees and shrubs along wetlands are important because they provide roost sites and a suitable habitat for nesting and foraging.

##### **4.4.2 Fuels Management Practices to Reduce Wildfire Risk**

Thinning within undeveloped buffer areas may include trees of any size to achieve 7.6 m (25 ft) spacing between tree crowns. However, clear cutting is not allowed in undeveloped buffer areas. No fuels management practices are allowed in core areas. Habitat alterations including thinning are not restricted in developed areas. All fuels management activities in developed and buffer areas must follow the guidelines in the Activity Table (Table 2, Section 4.5.2) if the AEI is occupied.

##### **4.4.3 Utility Corridors**

Habitat alterations such as cutting down trees that threaten power lines are allowed within 8 m (26 ft) of either side of an existing utility line in all areas of an AEI (Trujillo and Racine 1995).

New utility lines and utility lines requiring clearance of a right-of-way greater than 16 m (52 ft) total must be individually reviewed for ESA compliance. Disturbance activities must follow the guidelines given in the Activities Table for occupied AEIs.

#### **4.4.4 Restrictions on Habitat Alterations**

**Summary:** Habitat alterations other than the utility corridor maintenance described above are not allowed in undeveloped core areas under the guidelines of this site plan. Habitat alteration in buffers is limited. If a project or activity is planned that would alter habitat in an undeveloped core area, it must be individually evaluated for ESA compliance. Habitat alterations in a buffer area other than fuels management activities or utility corridor maintenance must be reported to a LANL biological resources SME for tracking (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

### **4.5 Definition of and Restrictions on Disturbance Activities**

#### **4.5.1 Definition of Disturbance Activities**

LANL biological resources SMEs considered five categories of activities that might cause disturbance in an AEI. Most of the categories were first identified in the document “Peregrine Falcon Habitat Management in the National Forests of New Mexico” prepared for the U.S. Forest Service (Johnson 1994). Other light production and other noise production were included to provide the most comprehensive list of activities possible, reducing the need for individual review of activities for ESA compliance. The categories of activities are people, vehicles, aircraft, other light production, and other noise production. The impact of explosives detonation on this species is not considered here because there are no explosives testing sites within 2 km (1.25 mi) of potential nesting habitat. Low, medium, and high levels of impact for these activities are considered here. The following categories of activities are restricted only in AEIs that are classified as occupied.

**People**—includes any entry of people into an AEI on foot.

- Low impact is the presence of three or fewer people per project and duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of people or the duration criteria.
- High impact is the exceedance of both the number of people and the duration criteria.

**Vehicles**—includes the entry of any two-axle highway vehicle, all-terrain vehicle, or motorized machinery into an AEI by any route other than a paved road or an improved gravel road.

- Low impact is the presence of two or fewer vehicles per project and duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of vehicles or the duration criteria.
- High impact is the exceedance of both the number of vehicles and the duration criteria.

**Aircraft**—includes the operation of any aircraft below an elevation of 600 m (2,000 ft) above the highest ground level in the local vicinity.

- Low impact is the presence of one single-engine airplane and duration of one day or less during a breeding season.
- Medium impact is the exceedance of either the number of aircraft or the duration criteria.
- High impact is the exceedance of both the number of aircraft and the duration criteria.

Any use of helicopters, jet airplanes, and propeller airplanes with two or more engines is classified as medium impact or above, depending on duration.

**Other Light Production**—includes any activity not previously listed that causes additional light to occur in an AEI core area (e.g., plans for construction of a new building at the edge of a developed area may call for lighting at night to facilitate nighttime work that impacts an undeveloped core area).

- Low impact is the increase of light intensity by up to 0.05 fc and a duration of one night or less per project per breeding season.
- Medium impact is the exceedance of either the intensity or duration criteria.
- High impact is the exceedance of both the intensity and duration criteria.

Measurements for increases in light are taken at the AEI core area boundary closest to the light source, if the source is outside the core, and at 10 m (33 ft) from the source if the source is inside the core. Light measurements for developed areas are taken at the edge of the developed area if the developed area is within an AEI core, or at the closest core boundary, if the developed area is outside of an AEI core.

**Other Noise Production**—includes any activity not previously listed except for explosives detonation that causes additional noise to occur in an AEI. For example, operation of machinery causes noise.

- Low impact is increasing noise levels in an AEI core by 6 dB(A) or less for one day or less per project per breeding season.
- Medium impact is the exceedance of either the level or the duration criteria.
- High impact is the exceedance of both the level and the duration criteria.

Measurements for increases in noise are taken at the AEI core boundary closest to the noise source if the source is outside the core, and at 10 m (33 ft) from the source if the source is inside the core. Noise measurements for developed areas are taken at the edge of the developed area if the developed area is within an AEI core, or at the closest core boundary if the developed area is outside of an AEI core.

#### **4.5.2 Activity Table**

Disturbance activities are of concern only when Southwestern Willow Flycatchers occupy an AEI. The AEI is always considered occupied between May 15 and September 15, or until surveys show the AEI to be unoccupied. The Southwestern Willow Flycatcher AEI is always considered unoccupied between September 16 and May 14, when flycatchers have migrated for the winter.

For occupancy status of an AEI after completion of surveys, contact a LANL biological resources SME (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

**Table 2. Restrictions on Activities in Undeveloped Occupied Southwestern Willow Flycatcher AEI**

	<b>Core</b>	<b>Buffer</b>
<b><i>Restrictions on Occupied Habitat</i></b>		
<i>People</i>		
Low	No Restrictions	No Restrictions
Medium	May 15 to August 15	No Restrictions
High	May 15 to September 15	No Restrictions
<i>Vehicles</i>		
Low	May 15 to September 15	No Restrictions
Medium	May 15 to September 15	No Restrictions
High	May 15 to September 15	No Restrictions
<i>Aircraft</i>		
Low	No Restrictions	No Restrictions
Medium	May 15 to August 15	May 15 to August 15
High	May 15 to September 15	May 15 to August 15
<i>Other Light/Noise Production</i>		
Low	May 15 to September 15	No Restrictions*
Medium	May 15 to September 15	No Restrictions*
High	May 15 to September 15	No Restrictions*

\*Noise or light production in the buffer is restricted if the activity would violate core area restriction on noise or light.

## 4.6 Protective Measures

**Summary:** This section provides a list of management practices to apply in the AEI.

- No wetland vegetation will be removed outside of developed areas.
- Appropriate erosion and runoff controls should be employed to reduce soil loss.
- Avoid unnecessary disturbance to vegetation (e.g., excessive parking areas or equipment storage areas, off-road travel, materials storage areas, crossing of streams or washes).
- Avoid removal of vegetation along drainage systems and stream channels.
- Avoid all vegetation removals not absolutely necessary.
- Appropriate erosion controls must be put in place and periodically checked throughout the life of any projects.
- All exposed soils must be revegetated as soon as feasible after disturbance to minimize erosion.

## **5.0 SOUTHWESTERN WILLOW FLYCATCHER AEI DESCRIPTION**

### **5.1 Pajarito Canyon Southwestern Willow Flycatcher AEI**

#### **5.1.1 Allowable Habitat Alteration in the Buffer Area**

Since the purpose of the buffer area is to help maintain the core area as suitable Southwestern Willow Flycatcher habitat, habitat alteration in the buffer area will be extremely limited. There are two areas in which restrictions on habitat alteration are relaxed.

1. The mesa top of Mesita del Buey. This mesa top can be developed as long as restrictions on impacts to the core area are met.
2. Pajarito Road within the AEI. Mowing of upland vegetation is allowed up to 5 m (15 ft) from Pajarito Road, or to the fence, if the fence is within 9 m (30 ft). Vegetation must cover the roadsides to prevent sediment runoff, so mowed plants should be at least 5 cm (2 in) high. LANL biological resources SMEs encourage the growth of willow throughout the AEI—even the area along Pajarito Road—to enhance habitat. If, within this area, it is absolutely necessary to remove new willow growth (i.e., to improve visibility for human safety), LANL biological resources SMEs recommend that only willows at or above the level of the roadway surface be mowed.

## **IV. AREA OF ENVIRONMENTAL INTEREST SITE PLAN FOR THE JEMEZ MOUNTAINS SALAMANDER**

### **1.0 SPECIES DESCRIPTION—JEMEZ MOUNTAINS SALAMANDER**

#### **1.1 Status**

The Jemez Mountains Salamander (*Plethodon neomexicanus*) was listed in New Mexico as endangered under the Wildlife Conservation Act of New Mexico in 2006 (NMDGF 2006). In September 2012 the USFWS proposed the Jemez Mountains Salamander as endangered under the ESA (FR 2012) and the final listing as endangered was on 10 September 2013 (FR 2013a)

#### **1.2 General Biology**

The Jemez Mountains Salamander is endemic to the Jemez Mountains of north-central New Mexico and is found in Los Alamos, Rio Arriba, and Sandoval counties (Stebbins and Rierner 1950). It is one of two endemic plethodontid salamanders that occur in New Mexico. It occurs predominantly at elevations between 2,130 to 3,430 m (6,988 to 11,254 ft) in mixed-conifer forest with greater than 50 percent canopy cover consisting mainly of Douglas fir (*Pseudotsuga menziesii* [Mirb.] Franco), blue spruce (*Picea pungens* Engelm.), Engelmann spruce (*Picea engelmannii* Parry ex Engelm.), white fir (*Abies concolor* [Gord. & Glend.] Lindl. ex Hildebr.), limber pine (*Pinus flexilis* James), ponderosa pine, and quaking aspen (*Populus tremuloides* Michx.). The ground surface in forest areas has (a) moderate to high volumes of large fallen trees and other woody debris, especially coniferous logs at least 25 cm (10 in) in diameter, particularly Douglas fir, which are in contact with the soil in varying stages of decay from freshly fallen to nearly fully decomposed; or (b) structural features, such as rocks, bark, and moss mats that provide

the species with food and cover. Underground habitat in forest or meadow areas contains interstitial spaces provided by (a) igneous rock with fractures or loose rocky soils, (b) rotted tree root channels, or (c) burrows of rodents or large invertebrates (Degenhardt et al. 1996; FR 2013b).

Plethodontid salamanders, which lack both lungs and gills, breathe through the mucous membranes in their mouth and throat and through their moist skin. The Jemez Mountains Salamander is completely terrestrial and does not use standing surface water for any life stage (FR 2012). Present in its habitat year-round, the Jemez Mountains Salamander spends most of its life underground, but can be found on the surface when conditions are warm and wet, approximately July through October. During this time, the Jemez Mountains Salamander can be found under rocks, bark, and moss mats and inside and under logs (Ramotnik 1986, Everett 2003). The Jemez Mountains Salamander eats invertebrates, including ants, mites, and beetles, and is thought to lay its eggs underground (FR 2013b).

### **1.3 Threats**

Principal threats to habitat include historical fire exclusion and suppression and severe wildland fires; forest composition and structure conversions; post-fire rehabilitation; forest and fire management; roads, trails, and habitat fragmentation; recreation; and disease (FR 2012).

## **2.0 IMPACT OF HUMAN ACTIVITIES**

### **2.1 Introduction**

Primary threats to the Jemez Mountains Salamander on LANL property are impacts to habitat quality or destruction of individual salamanders caused by LANL or Los Alamos County operations. Forested LANL property is also subject to impacts from severe wildland fire and wildfire suppression.

### **2.2 Impacts on Habitat Quality**

#### **2.2.1 Development**

Property at LANL varies from remote isolated land to heavily developed and/or industrialized. Most of the large developed areas at LANL are found on mesa tops, generally in the northern and western portion of LANL. The areas of Jemez Mountains Salamander habitat currently most impacted by development occur in Los Alamos Canyon. There is a secondary paved road (West Road) in the bottom of the canyon that exits the canyon on the north-facing slope through Jemez Mountains Salamander habitat. The canyon bottom also contains a recreational ice rink operated by Los Alamos County on an inholding owned by Los Alamos County. Development that reduces the occurrence of primary constituent elements of Jemez Mountains Salamander in core habitat would likely have a negative impact on the species.

#### **2.2.2 Pedestrians and Vehicles**

Many canyon bottoms and mesa tops at LANL have dirt roads traversing them. Most of these roads are gated; however, many of these roads are accessible to LANL employees and the public on foot or by bike. Some areas, such as Los Alamos Canyon, are frequently used by hikers and dog owners on active and historic trails which traverse the canyon, through Jemez Mountains

Salamander habitat in places. Maintenance of roads and trails in the habitat may have a negative impact on the species.

### **2.2.3 Severe Wildland Fire and Wildfire Suppression**

Stand-replacing wildfires significantly change forest composition and structure, and reduce canopy cover. Even ground wildfires may reduce the volume of fallen logs and large woody debris. Large areas of historic Jemez Mountains Salamander habitat have been impacted by stand-replacing wildfires associated with current forest stocking conditions, drought, and high temperatures (FR 2012). Forested habitats on LANL are also subject to severe wildland fires. To mitigate wildfire risks, some areas of LANL have been treated for fuels reduction and creation of fuel breaks both pre-emptively and during active wildfire suppression. Both wildfires and wildfire suppression activities can negatively impact the primary constituent elements of Jemez Mountains Salamander core habitat.

## **2.3 Impacts on Individual Salamanders**

### **2.3.1 Disease**

The amphibian pathogenic fungus *Batrachochytrium dendrobatidis* (Bd) was found in a wild-caught Jemez Mountains Salamander in 2003 (Cummer et al. 2005) on the east side of the species' range and again in another Jemez Mountains Salamander in 2010 on the west side of the species' range (FR 2012). Bd causes the disease chytridiomycosis, whereby the Bd fungus attacks keratin in amphibians. In adult amphibians, keratin primarily occurs in the skin. The symptoms of chytridiomycosis can include sloughing of skin, lethargy, morbidity, and death. Chytridiomycosis has been linked with worldwide amphibian declines, die-offs, and extinctions, possibly in association with climate change (Pounds et al. 2006). Chytridiomycosis may be a threat to the Jemez Mountains Salamander because this disease is a threat to many other species of amphibians and the pathogen has been detected in the Jemez Mountains Salamander (FR 2012).

As part of a cooperative study with the New Mexico Department of Game and Fish between 2007 and 2013, various amphibian species including the canyon tree frog (*Hyla arenicolor*), western chorus frog (*Pseudacris triseriata*), Woodhouse's toad (*Anaxyrus woodhousii*), tiger salamander (*Ambystoma tigrinum*), and Jemez Mountains Salamander were tested for Bd infection at LANL. To date, all sampling has been negative for Bd infection (Fresquez et al. 2013).

### **2.3.2 Destruction of Individual Salamanders**

During periods of the year when Jemez Mountains Salamander are on the soil surface, when conditions are warm and wet (generally July to October), they are vulnerable to injury and mortality from soil-disturbing activities, including operation of heavy equipment in core habitat. They also are at risk to be found and collected by people.

## **3.0 AEI GENERAL DESCRIPTION FOR JEMEZ MOUNTAINS SALAMANDER**

The AEI consists of two areas, a core area and a buffer area. The core habitat is defined as suitable habitat where the Jemez Mountains Salamander occurs or may occur at LANL. The core habitat consists of sections of north-facing slope that contain the required micro-habitat to support Jemez

Mountains Salamander. The buffer area is 100 m (328 ft) wide extending outward from the edge of the core area.

### 3.1 Method for Identifying a Jemez Mountains Salamander AEI

The first step in identifying potential Jemez Mountains Salamander at LANL was to use a GIS to model habitat. Early modeling efforts by Hathcock (2008) identified areas of potential habitat and that model was further refined. The following parameters were modeled in the GIS:

- Elevation: 7,000 ft (2,150 m) and above
- Slope: Greater than 20 degrees
- Aspect: north-facing +/- 20 degrees
- Land cover: Mixed conifer
- Land use: Undeveloped
- Modeled habitat is only selected if it is greater than five contiguous 30 × 30 m (98 × 98 ft) pixels in size

Once this habitat layer was developed, a second layer was modeled that examined the level of shade in the habitat, also known as an illumination index. Since the Jemez Mountains Salamander needs cool moist conditions, an illumination index model would further highlight areas where this habitat type may occur or further reinforce the areas selected by the GIS modeling. The illumination index describes the amount and extent of solar radiation reaching the Earth's surface at a given point. This takes into account the topography that may cast shadows. The illumination model was developed using the 5 m (16 ft) resolution digital elevation model hillshade and using the Surface toolbox in ArcToolbox (Environmental Science Research Institute, Redlands, California) using the highest height of the sun on June 21 at 1:00 pm, altitude of 74.4 and Azimuth of 178.4, when the sun would be at its maximum height. These procedures were based on work done by Reilly et al. (2009).

Once this modeling was complete, LANL biological resources SMEs performed field validation to verify the suitability of the modeled habitat. The goal was to verify that mixed conifer was still the dominant cover class in the selected area. The GIS analysis used data from a landcover map created by McKown et al. (2003). There have been changes in habitat since this landcover map was published from fire and extreme drought effects. Since LANL is on the extreme edge of Jemez Mountains Salamander lower elevational range, a key component in this part of its range is soil moisture content. During field validation, evidence of a moist mixed conifer habitat versus a dry mixed conifer habitat was noted. One of the key indicators used to delimit areas of moist versus dry mixed conifer during the field validation was the presence of white fir (Evans et al. 2011) combined with a high canopy cover.

Field validation of the model occurred in May 2013, or decisions were based on earlier field visits to the sites from other projects. Each field validation consisted of LANL biological resources SMEs walking down all of the modeled habitat polygons to look for the presence of indicator features. If a polygon of modeled habitat contained white fir, indicating a moist wet conifer type habitat, a high canopy closure, and other signs of high habitat quality such as dead logs, moss or

other areas that could be used as cover by the Jemez Mountains Salamander, then the polygon was marked for retention in the final core habitat. Polygons that did not contain the necessary habitat requirements were omitted.

After the field validation was complete, the final core habitat boundaries that LANL would recognize were hand digitized using ArcGIS (Environmental Science Research Institute, Redlands, California) by LANL biological resources SMEs in and around the validated modeled polygon and areas between polygons if appropriate. The final identified core habitat at LANL occurs on the north-facing slopes of canyons. Toward the rim of the canyon the core boundaries end where the mixed conifer ends. In the canyon bottoms the core boundary extends to the edge of the stream channel. The upstream and downstream core boundaries end where the mixed conifer ends. A buffer habitat was extended around the core to a distance of 100 m (328 ft) outward. The LANL Fenton Hill satellite facility in the Jemez Mountains off of New Mexico Highway 126 is on land leased to DOE by the Santa Fe National Forest. The entire footprint is considered to be developed core habitat for the Jemez Mountains Salamander, since proposed critical habitat is adjacent to the facility.

### **3.2 Location and Number of Jemez Mountains Salamander AEIs**

The identified Jemez Mountains Salamander core habitats were grouped by canyon system into AEIs, which contain contiguous and noncontiguous habitat areas. The largest contiguous section of habitat at LANL is in Los Alamos Canyon. There are two noncontiguous areas of habitat in Two-mile Canyon, four in Pajarito Canyon, one contiguous area in Cañon de Valle, and the entire Fenton Hill facility.

## **4.0 AEI MANAGEMENT**

### **4.1 Overview**

This AEI management section provides guidelines for LANL operations to reduce or eliminate the threats to the Jemez Mountains Salamander from habitat alterations that reduce habitat quality. Habitat alterations are considered for all AEIs and for both core and buffer areas. Developed areas that have ongoing baseline levels of activities and are not suitable habitat for Jemez Mountains Salamander have different restrictions than undeveloped core or buffer areas. AEIs for different species may overlap, and an activity must meet the guidelines of all applicable site plans to be allowable. Protective measures are described as management practices that should be followed when working in AEIs.

### **4.2 Definition and Role of Occupancy in AEI Management**

Occupancy simply refers to whether or not an AEI is occupied by the Jemez Mountains Salamander. The Los Alamos Canyon AEI is known to be occupied based on past surveys. Surveys for the Jemez Mountains Salamander are known to have a very low detection rate for occupied areas, so at LANL all AEIs are assumed to be occupied at all times. If needed, site-specific surveys will be conducted by federally permitted LANL biological resources SMEs.

### **4.3 Definition and Role of Developed Areas in AEI Management**

Developed areas include all building structures, paved roads, improved gravel roads, and paved and unpaved parking lots. The majority of Jemez Mountains Salamander core habitat is in undeveloped areas, except for the satellite facility at Fenton Hill and a small amount of habitat in Los Alamos Canyon where West Road crosses the habitat. Generally, developed areas will not have restrictions; however, some of the undeveloped sections within the footprint of Fenton Hill may have restrictions because they may contain Jemez Mountains Salamanders when they move to the surface between July and October. Any project that occurs within developed core habitat will be evaluated by LANL biological resources SMEs for ESA compliance.

### **4.4 General Description of Core and Buffer Areas and Allowable Area Development**

The purpose of buffer areas is to protect core areas from habitat degradation. The current levels of development in buffer and core areas represent baseline conditions for this site plan. No further development is allowed in the core area under the guidelines of this site plan. Any development in a buffer area will be reviewed by LANL biological resources SMEs to ensure that there are no impacts to the core habitat.

### **4.5 Emergency Actions**

If safety and/or property are immediately threatened by something occurring within an AEI (for example, wildfire, water line breakage, etc.) please contact a LANL biological resources SME (1-505-665-3366) as soon as possible. If the emergency occurs outside of regular business hours, contact the Emergency Management Office (1-505-667-6211). This office will then communicate with the appropriate LANL personnel.

### **4.6 Introduction to AEI Management Guidelines**

Section 4.7 provides the guidelines for habitat alterations and allowable activities in AEI core and buffer areas. It describes what and where habitat alterations are allowed under the guidelines of this site plan. If an activity does not meet the restrictions given in the guidelines, the activity must be individually reviewed for ESA compliance. This site plan only provides guidelines for the Jemez Mountains Salamander AEIs. If an activity is desired in an area with overlapping AEIs, all applicable site plans must be consulted. AEI maps show the location of all AEIs in an area. LANL biological resources SMEs are always available to help interpret site plans and answer questions (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

### **4.7 Definition of and Restrictions on Habitat Alterations**

#### **4.7.1 Definition of Habitat Alterations**

Habitat alteration includes any action that alters the soil structure, vegetative components necessary to the species, water quality, or hydrology in undeveloped areas of an AEI. An actual activity may take place outside of the AEI and will be considered habitat alteration if consequences of the activity have effects inside the AEI core. Habitat alterations would also include soil pits for soil samples deeper than 15 cm (6 in) using either hand or mechanized augers. Any activity that might disturb the soil will need to be reviewed by LANL biological resources SMEs.

The habitat components most important to the Jemez Mountains Salamander include soil structure and vegetative structure. The forest structure within an area designated as a Jemez Mountains Salamander AEI is important because it provides the necessary moist, cool microclimate.

#### ***4.7.2 Fuels Management Practices to Reduce Wildfire Risk***

One of the primary threats to the Jemez Mountains Salamander is wildfire (FR 2012), but they also require habitat with a high canopy cover which makes fuels reduction challenging. Within undeveloped core areas, thinning trees to a level of 80 percent canopy cover or higher is approved. Trees may not be thinned below 80 percent canopy cover without further ESA review by LANL biological resources SMEs. Large logs on the ground should be left in place and not chipped. Understory thinning that does not reduce total canopy cover below 80 percent is permitted. Large trees that are felled should be left as large logs on the ground. Smaller trees and understory shrubs that may be thinned should be dispersed and left on-site to aid in soil moisture retention. Thinning activities should not occur during the rainy season between July to October (or when freezing temperatures begin, whichever comes first) when the Jemez Mountains Salamander is found on the surface.

In buffer areas, thinning of trees can occur to the current LANL-approved prescription level (LAAO 2000). LANL biological resources SMEs are available to provide guidance and mark trees for thinning (<http://int.lanl.gov/environment/bio/controls/index.shtml>).

#### ***4.7.3 Utility Corridors***

Habitat alterations such as cutting down trees that threaten power lines are allowed within 8 m (26 ft) of either side of an existing electrical utility line at LANL under existing guidelines and engineering controls (Hathcock 2013). This level is approved in all areas of an AEI. New utility lines and utility lines requiring clearance of a right-of-way greater than 16 m (52 ft) total in core habitat must be individually reviewed for ESA compliance.

#### ***4.7.4 Restrictions on Habitat Alterations***

Habitat alterations other than the fuels management practices and utility corridor maintenance described above are not allowed in undeveloped core areas under the guidelines of this site plan. If a project or activity is planned that would alter habitat in an undeveloped core area, it must be individually evaluated for ESA compliance. Habitat alterations in buffer areas must be reviewed by LANL biological resources SMEs to ensure that there are no impacts to core habitat.

## Project Description

NAME

MSGP TA-54 Facilities

PROJECT CODE

MGYAW-OJOTF-DIJE0-ZGXLF-BYW60E

LOCATION

Los Alamos County, New Mexico

DESCRIPTION

No description provided

## U.S. Fish & Wildlife Contact Information

Species in this report are managed by:

**New Mexico Ecological Services Field Office**

2105 Osuna Road Ne

Albuquerque, NM 87113-1001

(505) 346-2525

# Endangered Species

Proposed, candidate, threatened, and endangered species that are managed by the [Endangered Species Program](#) and should be considered as part of an effect analysis for this project.

This unofficial species list is for informational purposes only and does not fulfill the requirements under [Section 7](#) of the Endangered Species Act, which states that Federal agencies are required to "request of the Secretary of Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action." This requirement applies to projects which are conducted, permitted or licensed by any Federal agency.

A letter from the local office and a species list which fulfills this requirement can be obtained by returning to this project on the IPaC website and requesting an Official Species List from the regulatory documents section.

## Amphibians

### Jemez Mountains Salamander *Plethodon neomexicanus*

**Endangered**

#### CRITICAL HABITAT

There is **final** critical habitat designated for this species.

<https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=D019>

## Birds

### Mexican Spotted Owl *Strix occidentalis lucida*

**Threatened**

#### CRITICAL HABITAT

There is **final** critical habitat designated for this species.

<https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=B074>

### Southwestern Willow Flycatcher *Empidonax traillii extimus*

**Endangered**

#### CRITICAL HABITAT

There is **final** critical habitat designated for this species.

<https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=B094>

### Yellow-billed Cuckoo *Coccyzus americanus*

**Threatened**

#### CRITICAL HABITAT

There is **proposed** critical habitat designated for this species.

<https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=B06R>

## Mammals

### New Mexico Meadow Jumping Mouse *Zapus hudsonius luteus*

**Endangered**

#### CRITICAL HABITAT

There is **proposed** critical habitat designated for this species.

<https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=A0BX>

## Critical Habitats

Potential effects to critical habitat(s) within the project area must be analyzed along with the endangered species themselves.

There is no critical habitat within this project area

# Migratory Birds

Birds are protected by the [Migratory Bird Treaty Act](#) and the Bald and Golden Eagle Protection Act.

Any activity which results in the take of migratory birds or eagles is prohibited unless authorized by the U.S. Fish and Wildlife Service ([1](#)). There are no provisions for allowing the take of migratory birds that are unintentionally killed or injured.

You are responsible for complying with the appropriate regulations for the protection of birds as part of this project. This involves analyzing potential impacts and implementing appropriate conservation measures for all project activities.

<b>Bald Eagle</b> <i>Haliaeetus leucocephalus</i>	<b>Bird of conservation concern</b>
Season: Wintering <a href="https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=B008">https://ecos.fws.gov/speciesProfile/profile/speciesProfile.action?spcode=B008</a>

## Refuges

Any activity proposed on [National Wildlife Refuge](#) lands must undergo a 'Compatibility Determination' conducted by the Refuge. If your project overlaps or otherwise impacts a Refuge, please contact that Refuge to discuss the authorization process.

There are no refuges within this project area

# Wetlands

Impacts to [NWI wetlands](#) and other aquatic habitats from your project may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal Statutes.

Project proponents should discuss the relationship of these requirements to their project with the Regulatory Program of the appropriate [U.S. Army Corps of Engineers District](#).

## DATA LIMITATIONS

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

## DATA EXCLUSIONS

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tubercid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

## DATA PRECAUTIONS

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

There are no wetlands identified in this project area

Cons. #02ENNM00-2014-I-0014

Geoffrey L. Beausoleil, Acting Manager  
National Nuclear Security Administration, Los Alamos Field Office  
Department of Energy  
Los Alamos, New Mexico 87544

Dear Mr. Beausoleil:

Thank you for your biological assessment entitled, "Biological Assessment of the Effects of Implementing the Jemez Mountains Salamander Site Plan on Federally Listed Threatened and Endangered Species at Los Alamos National Laboratory" (BA); the request for informal consultation and conferencing received on July 25, 2013 and supplemental information supplied in the "Jemez Mountains Salamander (*Plethodon neomexicanus*) Los Alamos National Laboratory (LANL) Site Plan" (Site Plan); and emails dated November 19 and December 3, 2013. The Department of Energy (DOE) requested concurrence with the determination of effects for the endangered Jemez Mountains salamander (*Plethodon neomexicanus*) (salamander) pursuant to Section 7(a)(2) of the Endangered Species Act of 1973 (ESA), as amended (16 U.S.C. § 1531 *et seq.*). Your proposed action consists of implementing the Site Plan, and includes of the incorporation of this Site Plan into LANL's Habitat Management Plan (HMP). The HMP was consulted upon in 1999 (Consultation #2-22-981-336) as the primary mechanism to ensure compliance with the ESA at LANL. The actions described in the Site Plan and analyzed in the BA, and supplemental emails are hereby incorporated by reference. You determined that implementing the Site Plan "may affect, is not likely to adversely affect" the salamander, and includes placing restrictions on certain types of work in areas identified as core habitat for the salamander on LANL property with the purpose of ensuring that effects to the salamander from those actions identified in the Site Plan are insignificant and discountable.

The Site Plan does not include any areas within designated salamander critical habitat, indicating that no critical habitat will be affected. The Site Plan has modeled and field validated the model to identify the areas on LANL property with the highest potential to be occupied by salamanders based on habitat features for the salamander. Each area identified by the modeling is termed "Area of Environmental Interest" (AEI) and consists of a "core area" and a "buffer area". The core area habitat is defined as suitable habitat where the salamander occurs or may occur at LANL. The core area habitat consists of sections of north-facing slope that contain the required

micro-habitat to support salamanders. The buffer area is 328 feet (100 meters) wide extending outward from the edge of the core area. Only the Los Alamos Canyon AEI is known to be occupied based on surveys. Surveys for the salamander are known to have a very low detection rate for occupied areas and DOE has assumed that all AEIs at LANL are occupied at all times by the salamander.

Within the Site Plan, DOE has assessed activities that could cause habitat alteration and includes any action that alters the soil structure, vegetative components necessary to the species, water quality, or hydrology in undeveloped areas of an AEI. If an activity were to take place outside of the AEI the activity will be assessed if it will have effects inside the AEI core. Within the core areas, only activities specified within the Site Plan and those that have no effect in the core areas (e.g. no habitat alterations or effects within the core areas) will be conducted without further consultation with the Service. Habitat alterations also include soil pits for soil samples deeper than 6 inches (15.2 centimeters) using either hand or mechanized augers. Within the Site Plan, DOE is proposing fuels management practices to reduce wildfire risk and maintenance of utility corridors within the AEIs. The likelihood that salamanders may be affected by the actions in the Site Plan is very low. To ensure that effects to the salamander are insignificant and discountable, the Site Plan incorporates the following conservation measures as restrictions to the identified work:

#### Fuels Management Practices to Reduce Wildfire Risk

- a. Within undeveloped core areas, thinning trees to a level of 80% canopy cover or higher may occur; tree thinning below 80% canopy cover is not part of the action under this consultation.
- b. Large logs on the ground will be left in place and not chipped.
- c. Large trees that are felled will be left as large logs on the ground
- d. When appropriate, smaller trees and understory shrubs that may be thinned will be dispersed and left on-site to aid in soil moisture retention.
- e. In buffer areas, thinning of trees may occur to the current LANL-approved prescription level; clear-cutting will not occur.
- f. Thinning activities will not occur during the rainy season when salamanders are surface active, between July 1 – October 31. Thinning activities may occur earlier in October if freezing temperatures are present.
- g. In the unlikely event that a salamander is observed surface active during thinning activities, all activities shall cease, and the Service will be notified.

#### Utility Corridors

- a. Cutting trees that threaten power lines may occur within 26 feet (8 meters) of either side of an existing utility line at LANL
- b. New utility lines and utility lines requiring clearance of a right-of-way greater than 52 feet (16 meters) total in core habitat is not part of the action under this consultation.

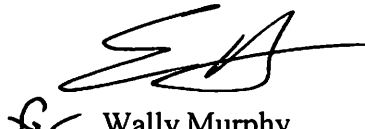

Habitat alterations other than the fuels management practices and utility corridor maintenance described above will not occur in undeveloped core areas under the guidelines of the Site Plan or this consultation. The Service concurs with DOE's determination regarding the salamander for the following reasons:

Within the Site Plan, DOE has placed the above detailed restrictions to ensure that any effects to the salamander and its habitat remain insignificant and discountable. Canopy cover will remain at 80% or greater in undeveloped core areas and fire management actions will occur outside of the salamander surface activity period. Maintaining utility line corridors in areas with existing infrastructure (the utility lines) by removing individual hazard trees is not expected to have any measurable effect on salamanders or their potential habitat. Consequently, we concur that potential effects to the salamander from the proposed action will be insignificant and discountable.

This concludes section 7 consultation regarding the proposed action. If monitoring or other information results in modification or the inability to complete all aspects of the proposed action, consultation should be reinitiated. Please contact the Service if: 1) future surveys detect listed, proposed or candidate species in habitats where they have not been previously observed; 2) the proposed action changes or new information reveals effects of the proposal to listed species that have not been considered in this analysis; or 3) a new species is listed or critical habitat designated that may be affected by the action.

Thank you for your concern for endangered and threatened species and New Mexico's wildlife habitats. In future correspondence regarding this project, please refer to consultation #02ENNM00-2014-I-0014. If you have any questions, please contact Michelle Christman of my staff at (505) 761-4715.

Sincerely,

  
Wally Murphy  
Field Supervisor

Mr. Ron Curry, Regional Administrator  
U.S. Environmental Protection Agency, Region 6  
1445 Ross Avenue, Suite 1200  
Mail Code: 6RA  
Dallas, TX 75202-2733

Dear Mr. Curry:

**SUBJECT: NOTIFICATION OF LOS ALAMOS NATIONAL SECURITY, LLC SIGNATORY  
OFFICIAL AND AUTHORIZED REPRESENTATIVES FOR NPDES  
STORMWATER GENERAL PERMITS AND LANL INDUSTRIAL POINT SOURCE  
OUTFALL PERMIT (NPDES PERMIT NO. NM0028355)**

The purpose of this letter is to provide an update to the Environmental Protection Agency (EPA) Region 6 on the signatory authority for the operator of Los Alamos National Laboratory (LANL) NPDES permits. Los Alamos National Security, LLC (LANS) has been the Laboratory's management and operation contractor since June 1, 2006 and is also a co-permittee with the Department of Energy under the LANL Industrial Point Source Outfall Permit (NPDES Permit No. NM0028355).

The positions of Associate Director of Environmental, Safety, and Health (ADESH), Deputy Associate Director, and Division Leader of the Environmental Protection Division (ENV-DO) are hereby identified as LANS's primary signatory officials under 40 CFR 122.22(a) for certifying and signing permit applications and reports required under the LANL Industrial Point Source Outfall Permit (NPDES Permit No. NM0028355) and the NPDES Stormwater Construction and Multi-Sector General Permits.

The following positions are hereby designated as authorized representatives under 40 CFR 122.22(b) to sign reports, Storm Water Pollution Prevention Plans, and any other compliance documentation required by the permits:

**Construction General Permit:**

- Group Leader of the Laboratory's Environmental Compliance Programs Group.
- Cognizant Project Manager, Project or Field Engineer, or Subcontractor Technical Representative for the regulated construction activity.

- Responsible Facility Operations Director (FOD), Deputy FOD, or Operations Manager responsible for the overall operation of the regulated facility or construction activity.

**Multi-Sector General Permit (No. NMR05GB21) & Industrial Point Source Outfall Permit (No. NM0028355):**

- Group Leader of the Laboratory's Environmental Compliance Programs Group.
- Division Leader, Deputy Division Leader, or Group Leader of the LANL division responsible for the overall operation of the regulated facility or activity.
- Responsible FOD, Deputy FOD or Operations Manager responsible for the overall operation of the regulated facility or activity.
- Group Leader in the ESH Deployed Services Division assigned to the regulated facility.

This letter supersedes and replaces the signatory authority letter dated March 2, 2009 (See Enclosure 1) with respect to the LANL Industrial Point Source Outfall Permit, the Construction General Permit, and the Multi-Sector General Permit, and is submitted to notify the EPA of the current authorized representatives pursuant to 40 CFR 122.22(c).

Please contact Alison M. Dorries, Division Leader for the Environmental Protection Division, at (505) 665-6592, if you have questions.

Sincerely,

Michael T. Brandt, DrPH, CIH  
Associate Director  
Environment, Safety & Health

Mr. Lawrence E. Starfield, Regional Administrator  
U.S. Environmental Protection Agency, Region 6  
1445 Ross Avenue, Suite 1200  
Dallas, TX 75202-2733

Dear Mr. Starfield:

**SUBJECT: DELEGATION OF "AUTHORIZED REPRESENTATIVE" FOR THE  
CLEAN WATER ACT (CWA) AND NPDES STORM WATER PERMITS  
AND INDUSTRIAL OUTFALL PERMIT BY LOS ALAMOS NATIONAL  
SECURITY, LLC (LANS)**

The purpose of this letter is to inform the Environmental Protection Agency (EPA) Region 6 of a change in signatory authority for operator of Los Alamos National Laboratory (LANL). Los Alamos National Security, LLC (LANS) has been the Laboratory's management and operation contractor since June 1, 2006. This letter delegates authority as the LANS "authorized representative" for certifying and signing permits and documents required under the Clean Water Act and associated National Pollutant Discharge Elimination System (NPDES) storm water permits (Construction General Permit, Multi-Sector General Permit, LANL Individual Permit), and the NPDES Industrial Outfall Permit. This letter replaces the two LANS' delegation of "authorized representative" letters dated June 1, 2006 (ESH&Q: 06-001) and June 19, 2006 (ESH&Q: 06-002).

As the designated LANS signatory official for Clean Water Act and associated NPDES Permit Programs (please see Enclosure 1), I wish to further identify the position of Division Leader of the Laboratory's Environmental Protection Division (ENV-DO) as certifying official for NPDES standard permit requirements with the authority to certify, review, approve and/or sign as certifying official of all permit applications (e.g. Notice of Intent (NOIs) and Notice of Termination (NOTs)), permit modifications, registrations, certifications, reports and other information as required by EPA. The following is a detailed breakdown of this delegation of signatory authorities.

The following positions are hereby designated as authorized representatives to sign reports, plans, certifications, notices of changed conditions, discharge monitoring reports, and other information as required by the EPA:

NPDES Storm Water Construction General Permit

- Group Leader or Deputy Group Leader of the Laboratory's Water Quality & RCRA Group.
- Cognizant Project Manager, Project Leader, or Subcontractor Technical Representative for the regulated construction activity.
- Responsible Facility Operations Director (FOD), Deputy FOD, or Operations Manager responsible for the overall operation of the regulated facility or activity.

Multi-Sector General Permit & LANL Individual Permit

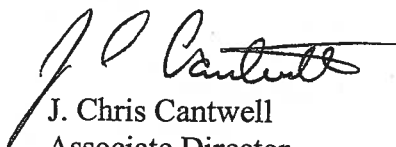

- Group Leader or Deputy Group Leader of the Laboratory's Water Quality & RCRA Group.
- Director, Deputy Director, or Group Leader of the Laboratory Division responsible for the overall operation of the regulated facility or activity.
- Responsible FOD, Deputy FOD or Operations Manager responsible for the overall operation of the regulated facility or activity.
- Program Director, Program Manager or Project Leader responsible for the overall operation of the regulated facility or activity.

NPDES Outfall Permit No. NM0028355

- Group Leader or Deputy Group Leader of the Laboratory's Water Quality & RCRA Group.
- Director or Deputy Director of the Laboratory Division responsible for the overall operation of the regulated facility or activity.

Please contact Tori George, Division Leader for Environmental Protection, at (505) 667-2211, if you have questions.

Sincerely,

J. Chris Cantwell  
Associate Director  
Environment, Safety, Health and Quality

March 4, 2009

J. Chris Cantwell  
Associate Director  
Environment, Safety, Health and Quality  
Los Alamos National Security

Dear Mr. Cantwell: *Chris*

**SUBJECT: CONTRACT NUMBER: DE-AC52-06NA25396, DELEGATION OF AUTHORITY FOR PERMITS, AUTHORIZATIONS AND OTHER DOCUMENTS AS AN OPERATOR OR CO-OPERATOR UNDER ENVIRONMENTAL PERMITS FOR THE LOS ALAMOS NATIONAL LABORATORY**

I, Michael R. Anastasio, Director of Los Alamos National Laboratory and President of Los Alamos National Security, LLC (LANS), the "Company," hereby delegate authority to you, J. Chris Cantwell, Associate Director, Environmental, Safety and Health and Quality (ADESH&Q), to execute on behalf of the Company permits, authorizations, or other documents necessary for the Company to become an operator or co-operator under the environmental permits for the Los Alamos National Laboratory, which permits are currently in the name of the Los Alamos National Security.

This delegation shall remain in effect while you are in the position of Associate Director, ADESH&Q or until revoked by me.

Sincerely,

Michael R. Anastasio  
Director

## 1.0 PURPOSE

This Environmental Protection – Compliance Programs Group (ENV-CP) procedure describes processes and implements requirements for spill investigations.

## 2.0 SCOPE

This procedure applies to all ENV-CP staff and personnel conducting spill investigations.

### 2.1 HAZARD REVIEW

The work described in this procedure is field work and has a **LOW hazard** rating as documented by submittal of a completed [ENV Low Hazard Verification form](#) to the Quality Assurance Specialist.

## 3.0 RESPONSIBILITIES

The following personnel require training before implementing this procedure:

- ENV-CP staff and contract personnel who perform spill response and investigation require training on this procedure.

Annual re-training to this procedure is required. Specific training requirements will be updated as needed.

The training method for this procedure is part “self-study” and part on-the-job training (OJT). The OJT training is to be conducted by a Team Leader or person designated as Subject Matter Expert (SME) by the ENV-CP Group Leader. The self-study and OJT will be documented in accordance with [ENV-DO-QP-115, Personnel Training](#).

Actions specified within this procedure, unless proceeded with “should” or “may,” are to be considered mandatory (i.e., “shall”, “will”, “must”).

### 3.1 PREREQUISITES

- None

## 4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT

The following records generated as a result of this procedure are to be submitted in accordance with [ENV-DO-QP-110, Records Management](#).

- Field notebook documentation of the release including:
  - time and date of the release
  - time and date of ENV-CP notification
  - location of the release and from where the release occurred (equipment, etc.)
  - type of material released
  - quantity of material released
  - if an impact to a watercourse, SWMU, or PRS occurred

Spill Investigations	No. ENV-CP-QP-007.9	Page 5 of 14
	Effective Date: July 19, 2013	

- time release was stopped
- any immediate mitigating actions implemented to contain or control the release
- Any written report and verbal notification list generated should the release be deemed reportable.
  - Non-Reportable LANL Spill Report (Attachment 2)

## 5.0 WORK PROCESSES

Responsibility is to assure the immediate mitigation and timely notification of appropriate regulatory organizations in the event of a spill or unplanned discharge that has or may affect the environment. Work requires frequent and unscheduled site visits to any area of the Laboratory during a spill or unplanned release as support staff for the on-scene EO-EM Incident Commander.

Specific activities associated with Spill Response and Investigation:

- Respond to the spill or unplanned release site;
- Report to the On-Scene EO-EM Incident Commander and Site Safety Officer;
- Receive site safety requirements;
- Provide decision support;
- Investigate the nature and extent of the spill or unplanned release;
- Evaluate the potential environmental impact to water quality;
- Report the occurrence to the regulatory agencies, if necessary; and
- Provide support to mitigation plan and implementation.

### 5.1 FIELD ACTIVITY

If the spill or unplanned discharge is determined to be a non-emergency event by EO-EM response, such as a release of potable water, perform the following steps:

Step	Action
1	Perform a site visit in coordination with the Facility Operations Director designee.
2	Assess potential environmental damage.
3	Provide mitigation measures and requirements.
4	Document the event.
5	Notify regulatory agencies and DOE, if necessary.
6	Facilitate collection of samples, if necessary.

For emergency response, perform the following steps:

Step	Action
1	Report to on-scene commander and await instructions.
2	Perform a site visit in coordination with EO-EM.

Spill Investigations	No. ENV-CP-QP-007.9	Page 6 of 14
	Effective Date: July 19, 2013	

3	Adhere to access requirements as developed by the EO-EM Site Safety Officer and Incident Commander.
4	Identify source and cause of release and document.
5	Provide notification and written report if necessary.
6	Facilitate collection of samples if necessary and safe to do so.

If sample collection is required, contact the following sampling personnel:

- ENV-CP
  - NPDES outfall
  - Sanitary treatment solids
  - Wastes and chemical spills (liquid, solid, hazardous)
- ADEP Corrective Actions Program
  - Surface water
  - Storm water runoff
  - Groundwater
  - Sediments

## 5.2 COMMUNICATION

Take a cellular phone that will transmit from the location to be visited. Also take a contact pager to receive messages.

If cellular service is unavailable, use a portable radio set to the appropriate radio frequency.

If in a secure area where cell phone use is prohibited, use the radio. Be sure to have radio checked and authorized for use within secure areas or within the boundaries of the WFO FOD or WX Division. Government-owned cellular phones, with batteries removed, may be brought into the secure area but used only if approval is given by the EO-EM Incident Commander or FOD or designee. Rules of use for Smartphones and other mobile devices (BlackBerry, iPhones, iPads) can be found on the Computing Communications webpage for mobile devices, <http://int.lanl.gov/computing/communications/mobile/index.shtml>.

Radio or cellular contact must be established with a designated contact prior to leaving ENV-CP and upon arrival/departure at the site in accordance with [ENV-DO-QP-100, General Field Safety](#).

The Incident Commander can make special communication exceptions.

All photography at LANL must adhere to the procedure and [P202-5, Prohibited and Controlled Articles](#).

Wastes generated from activities described in the procedure will be properly characterized, managed, and disposed in accordance with [P409, Waste Management](#), [P930-1, LANL Waste Acceptance Criteria](#), and [P403, Environmental Aspects Identification Requirement](#).

Spill Investigations	No. ENV-CP-QP-007.9	Page 7 of 14
	Effective Date: July 19, 2013	

### 5.3 FACILITY MANAGEMENT WORK CONTROL REQUIREMENTS FOR FIELD ACTIVITIES

Most field activities performed by the ENV-CP spill response personnel are impacted by facility management work control requirements. Requirements vary between the respective Facility Operations Divisions (FODs) and therefore necessitate ENV-CP response personnel to acquire FOD approval for site access in advance of starting work activities. The exception to this is in response to emergency situations as support to EO-EM staff.

Should work be required to stop/pause, reference [P101-18, Procedure for Pause/Stop Work](#), for guidance.

### 5.4 FACILITY MANAGEMENT-SPECIFIC ACCESS REQUIREMENTS

TA-16 and TA-11 high explosives areas have specific access requirements. Access inside the security gate requires annual site-specific training. Curricula# 5243 must be assigned and all the training courses completed before arriving at TA-16.

For access to perimeter gates during normal working hours, contact MSS-UI at 665-0106.

For perimeter gates with key core MSS-UI, prior notification for after hours entry is required. Perform the following steps:

Step	Action
1	Call SOC Los Alamos at 667-4437.
2	Identify yourself to the on duty officer or attendant.
3	Provide the following information: Group, color and make of vehicle (s), which perimeter gate you are entering, and approximate time of arrival and finally, length of stay.

Failure to notify security personnel in advance could result in a security violation against the visiting Team Member.

Provide notification to SOC Los Alamos at 667-4437 when leaving area.

For access to WX areas requiring during normal working hours, perform the following steps:

- Ensure the required security clearance (Q clearance) is held, and
- Contact the FOD or designee for entry requirements.

#### 5.4.1 CHEMISTRY METALLURGY RESEARCH FACILITY ACCESS

For access to the Chemistry Metallurgy Research Facility, perform the following:

- Must have the required Q clearance to pass the security gate.
- If access into any of the buildings is necessary, contact the FOD for an escort.
- If responding to an emergency with EO-EM, ENV-CP staff will be considered part of the EO-EM response team, met at the access gate, and escorted to the spill site.

Spill Investigations	No. ENV-CP-QP-007.9	Page 8 of 14
	Effective Date: July 19, 2013	

#### **5.4.2 TA-3-66 SIGMA FACILITY ACCESS**

For access to the Sigma facility (TA-3-66), perform the following:

- For non-emergency responses, obtain prior site-specific training and authorization or contact the FOD for personnel escort.
- For emergency response with EO-EM, ENV-CP staff will be considered part of the EO-EM response team, met at the access gate, and escorted to the spill site.

### **5.5 REGULATORY SPILL REPORTING**

If a spill is determined to be a threat to the environment or human health, regulatory and DOE notification may be necessary. Contacts and telephone numbers can be found on Attachment 1, Release Notification Phone List.

If a Spill impacts a Solid Waste Management Unit (SWMU) or Area of Concern (AOC), contact ENV-CP and ADEP Corrective Action Program for possible additional notification requirements. See Attachment 1 to this document.

If ENV Division or designated SME personnel determine after a site inspection or verbal notification that a spill is non-reportable to DOE or applicable regulatory agencies, a non-reportable spill report must be completed by appropriate facility designated personnel. See attachment 2 for the spill report form and information to be collected. Once the form has been accurately completed it can be sent to the SME at ENV-CP for required documentation.

For ENV Division designated on-call personnel, follow guidance for spill reporting as described in [ENV-DO-QP-101, \*Environmental Reporting Requirements for Releases or Events\*](#).

**NOTE:** On-call representatives are required to follow up in writing (email is sufficient) with the spills program lead regarding all releases during their on-call schedule. If no spills are reported in off-work hours, please confirm in writing with the spills program lead at the end of your on-call schedule.

For additional information concerning spill and unplanned discharge determination and notification requirements, contact the ENV-CP Water Quality Permitting and Compliance Team Leader.

Who discovered the Spill?

### Spill Information

Describe the spill response, in chronological order. Include a call-out response personnel, steps taken to contain the spill, and steps taken to clean it up. Also describe spill control equipment used.

### Additional Information

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

## 1.0 PURPOSE

This procedure is written to provide requirements for identifying, documenting and entering corrective actions into the ENV-RCRA MSGP Corrective Action Report Findings database.

## 2.0 SCOPE

Requirements set forth in this document apply to Los Alamos National Laboratory industrial facilities covered by the National Pollutant Discharge Elimination System (NPDES) Storm Water Multi-Sector General Permit (MSGP). This “general permit” requires identification, documentation, tracking and reporting of corrective actions in accordance with sections 2.2.1, 3, 4.1.2, 4.2.2, 4.3.2, 5.0, 5.2, 5.4, 6.2.1, 6.2.1.2, 7.2 and Appendices B and I.

### 2.1 HAZARD REVIEW

The work described in this procedure is office work only and has a **LOW hazard** rating as documented by submittal of a completed [ENV Low Hazard Verification form](#) to the Quality Assurance Specialist.

## 3.0 RESPONSIBILITIES

The following personnel require training before implementing this procedure:

- Group and Team Leader
- ENV-RCRA MSGP Storm Water compliance personnel
- Deployed Environmental Professionals (DEPs)
- Other LANL or subcontract personnel identified as being required to conduct storm water assessments as part of their job duties.

In addition to training to this procedure, the following training is also required prior to performing this procedure:

- [ENV-RCRA QAPP-MSGP Quality Assurance Project Plan for the Storm Water Multi-Sector General Permit for Industrial Activities](#)

The training method for this procedure is “self-study” (required read). For ENV-RCRA staff, this is documented in accordance with [ENV-DO-QP-115, Personnel Training](#). Other participating groups may require training documentation pursuant to local procedures.

Actions specified within this procedure, unless preceded with “should” or “may”, are to be considered mandatory (i.e., “shall”, “will”, “must”).

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 5 of 23
	Effective Date: February 28, 2013	

### 3.1 ROLES AND RESPONSIBILITIES

#### 3.1.1 ENV-RCRA MSGP STORM WATER TEAM

ENV-RCRA MSGP Storm Water Team members will be fully knowledgeable of the specific regulatory requirements identified in the 2008 MSGP and are responsible for ensuring compliance with these requirements and entering corrective actions. Team members will evaluate corrective actions that the DEPs enter into the ENV-RCRA MSGP Corrective Action Report Findings database and modify them as needed for quality assurance. This team will also periodically review open corrective actions and follow up with the DEPs, ES&H Managers, or Upper Management, as deemed necessary, to ensure close out of the corrective action. The team members will notify upper management of instances of non-compliance with the permit. A team member may also be responsible for responding to the regulatory authority (EPA) regarding identified storm water issues and/or negotiate settlement of any identified issues.

#### 3.1.2 DEPLOYED ENVIRONMENTAL PROFESSIONALS

DEPs will be fully knowledgeable of the site specific Storm Water Pollution Prevention Plan (SWPPP) and corrective action requirements identified in the MSGP for the facilities they are deployed to. In addition, they shall be appropriately trained to meet the job qualifications identified in the *Quality Assurance for Storm Water Multi-Sector General Permit for Industrial Activities Program* (ENV-RCRA-QAPP-MSGP) and shall be familiar with the regulatory requirements identified in the 2008 MSGP. Further, they shall be familiar with facility operations so that potential pollution discharge sources can be determined and corrective actions can be identified.

The DEPs are responsible for identifying and entering corrective actions observed at their industrial facilities into the ENV-RCRA MSGP Corrective Action Report Findings database. They are also responsible for updating corrective actions in a timely manner that cannot be implemented immediately. They will work with the ES&H Manager and ENV-RCRA storm water personnel to ensure identified corrective actions are implemented by overseeing repairs and/or improvements or instituting additional controls. If it is determined that corrective actions are necessary following an assessment, any modification to the control measures must be made before the next storm event if possible, or as soon as practicable following that storm event.

**NOTE:** These time intervals are not grace periods, but are schedules considered reasonable for documenting your finding(s) and for making repairs and improvements. They are included in the MSGP Permit to ensure that the conditions prompting the need for these repairs and improvements are not allowed to persist indefinitely (see Section 3.3 of the 2008 MSGP). In no instance will the corrective action remain open indefinitely.

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 6 of 23
	Effective Date: February 28, 2013	

### 3.1.3 ENV-RCRA STORM WATER TEAM LEADER

The ENV-RCRA Storm Water Team Leader is responsible for compliance oversight relative to the 2008 MSGP. The Team Leader will ensure costs needed to implement the regulatory requirements identified in the 2008 MSGP are identified and environmental risks are assessed. Upper management will be notified of these costs or environmental risks, as deemed necessary. In the event there is a dispute regarding the regulatory requirements contained in the MSGP, the Team Leader will make the final determination of the required action. The Team Leader will notify upper management of instances of non-compliance with the permit.

### 3.1.4 ENV-RCRA GROUP LEADER

The ENV-RCRA Group Leader or designee is responsible for ensuring there is adequate funding to implement the regulatory requirements identified in the 2008 MSGP. The Group Leader also acts as the duly authorized signatory that certifies the reports. The Group Leader will notify upper management of instances of non-compliance with the permit or other identified environmental risk.

### 3.1.5 ES&H MANAGER

The ES&H manager shall identify funding for their industrial facilities to ensure compliance with the 2008 MSGP. The ES&H Manager is also responsible for ensuring that industrial facilities are complying with the 2008 MSGP permit and notifying upper management of instances of non-compliance with the permit or other identified environmental risk.

### 3.1.6 FACILITIES OPERATIONS DIRECTOR

The Facilities Operations Director (FOD) provides organizational leadership to ensure that all facility and programmatic activities under their authority are performed in compliance with the 2008 MSGP. The FOD is also responsible for establishing an environmental compliance envelope. It is the FOD's responsibility to maintain trained and qualified Environmental Professionals and Waste Management Coordinators on staff.

### 3.1.7 COMPUTER PROGRAMMER

Maintains and updates the ENV-RCRA MSGP Corrective Action Report Findings database as requested by MSGP storm water personnel.

## 3.2 PREREQUISITES

In addition to training to this procedure, the following training is also required prior to performing this procedure:

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 7 of 23
	Effective Date: February 28, 2013	

- [\*ENV-RCRA QAPP-MSGP, Quality Assurance Project Plan for the Storm water Multi-Sector General Permit for Industrial Activities Program\*](#)

#### **4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT**

The following records generated as a result of this procedure are to be submitted to the designated RM-POC in accordance with [\*ENV-DO-QP-110, Records Management\*](#) and filed in project files.

- MSGP Comprehensive Site Inspection Annual Report
- Completed Routine Inspection Forms
- Electronic records within the ENV-RCRA MSGP Corrective Action Report Findings database.
- Copies of automated e-mail notifications

#### **5.0 WORK PROCESSES**

##### **5.1 IDENTIFYING CORRECTIVE ACTIONS**

If any of the following conditions occur, the DEP or ENV-RCRA storm water team member must review and revise the selection, design, installation, and implementation of control measures to ensure that the condition is eliminated and will not be repeated in the future:

- An unauthorized release or discharge (e.g., spill, leak, or discharge of non-storm water not authorized by the 2008 MSGP);
- You become aware, or EPA determines, that your control measures are not stringent enough for the discharge to meet applicable water quality standards;
- An inspection or evaluation of the facility by an EPA official and/or local or State entity, determines that modification to the control measures are necessary to meet the non-numeric effluent limits in the 2008 MSGP;
- You find in the routine facility inspection, quarterly visual assessment, or comprehensive site inspection that the control measures are not being properly operated and maintained;
- Construction or a change in design, operation, or maintenance at the facility significantly changes the nature of pollutants discharged in storm water from the facility, or significantly increases the quantity of pollutants discharged; or
- The average of four quarterly sampling results exceeds an applicable benchmark. If less than four benchmark samples have been taken, but the results are such that an exceedence of the four quarter average is mathematically certain, (i.e., if the sum of quarterly sample results to date is more than four times the benchmark level) this is considered a benchmark exceedence, triggering this review;
- If effluent limitation guidelines are exceeded at the Asphalt Batch Plant (Sector D); or
- If impaired water quality standards are exceeded.

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 8 of 23
	Effective Date: February 28, 2013	

## 5.2 ROUTINE INSPECTIONS

Routine inspections shall be conducted by the DEP (or a qualified member if the DEP is not trained and qualified) at all areas of the facility where industrial materials or activities are exposed to storm water, and of all storm water control measures used to comply with the effluent limits contained in the 2008 MSGP. Routine inspections shall be conducted at least quarterly; however, some facilities conduct monthly inspections (as specified in the facility specific SWPPP). Routine inspections shall be conducted during periods when the facility is in operation. A certified copy of completed Routine Inspection Forms shall be maintained in the facility's SWPPP.

At least once each calendar year, the routine facility inspections must be conducted during a period when a storm water discharge (either rain or snow) is occurring. The DEP(s) or storm water personnel from ENV-RCRA are responsible for identifying and entering corrective actions observed during the routine inspections into the ENV-RCRA MSGP Corrective Action Report Findings database. The database is set up to allow access for all identified DEPs associated with a particular FOD if the FOD has more than one DEP. Contact a member of the ENV-RCRA storm water team if you do not have access to this database and the FOD has assigned you responsibility for MSGP corrective actions.

**NOTE:** If the industrial facility is inactive and unstaffed and there are no industrial materials or activities exposed to storm water, routine inspections may not be required. A determination of whether a facility is inactive or unstaffed shall be made in coordination with storm water personnel from ENV-RCRA as there are specific documentation and certification requirements that have to be met prior to discontinuing routine inspections.

## 5.3 COMPREHENSIVE INSPECTIONS

Qualified ENV-RCRA storm water personnel will conduct one comprehensive inspection of all industrial facilities and those that meet the "no exposure" criteria subject to the 2008 MSGP before September 29<sup>th</sup> of each year. At least one member of the facility's storm water pollution prevention team shall participate in this inspection. This is usually the DEP.

This inspection must cover all areas of the industrial facility affected by the requirements in the 2008 MSGP including the areas identified in the SWPPP as potential pollutant sources where industrial material or activities are exposed to storm water, areas where control measures are used to comply with the effluent limits, and areas where spills and leaks have occurred in the past 3 years. The inspector must include review of the monitoring data (analytical results from benchmark and impaired waters and visual assessments) collected that calendar year as part of the comprehensive inspection. Inspectors must examine the following at a minimum:

- Industrial materials, residue, or trash that may have or could come into contact with storm water;
- Leaks or spills from industrial equipment, drums, tanks, and other containers;

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 9 of 23
	Effective Date: February 28, 2013	

- Offsite tracking of industrial or waste materials, or sediment where vehicles enter or exit the site;
- Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas; and
- Control measures needing replacement, maintenance, or repair.
- Storm water controls measures required by the 2008 MSGP must be observed to ensure that they are functioning correctly.

**NOTE:** The annual comprehensive site inspection may also be used as one of the routine inspections, as long as all components of both types of inspections are included.

ENV-RCRA will then enter all identified corrective actions into the ENV-RCRA MSGP Corrective Action Report Findings database. It is the responsibility of the DEP to update the database to reflect updates to these corrective actions.

Information compiled during the comprehensive inspection is used to complete the Annual Report. This report shall be submitted to EPA (postmarked) within 45 days of the last facility inspection completed in September of each year. For example, if the last facility was inspected (as part of the comprehensive site inspection) on September 22, the report shall be postmarked before or on November 6<sup>th</sup>. A complete certified copy of the Annual Report shall be maintained in the facility's SWPPP.

## **5.4 SPILLS**

All leaks or spills shall be cleaned up immediately and entered into the ENV-RCRA MSGP Corrective Action Report Findings database. This can be done by either the DEP or an ENV-RCRA MSGP storm water team member. If the spill is immediately cleaned up, and controls are put in place to prevent further leakage, the corrective action can be closed.

## **5.5 ALLOWABLE NON-STORM WATER DISCHARGES**

The following are allowable non-storm water discharges authorized by the 2008 MSGP:

- Discharges from fire-fighting activities;
- Fire hydrant flushing;
- Potable water, including water line flushings;
- Uncontaminated condensate from air conditioners, coolers, and other compressors and from the outside storage of refrigerated gases or liquids;
- Irrigation drainage;
- Landscape watering provided all pesticides, herbicides, and fertilizer have been applied in accordance with the approved labeling;
- Pavement wash waters where no detergents are used and no spills or leaks of toxic or hazardous material have occurred (unless all spilled material has been removed);

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 10 of 23
Effective Date: February 28, 2013		

- Routine external building washdown that does not use detergents; and
- Uncontaminated ground water or spring water.

Any person authorized to conduct work at LANL can identify a potential storm water issue. If this occurs, they should contact the DEP or an ENV-RCRA MSGP storm water team member who will determine if a corrective action is needed.

## 5.6 ENTERING CORRECTIVE ACTIONS

To enter a corrective action into the ENV-RCRA MSGP Corrective Action Report Findings database, perform the following steps:

**NOTE:** Be clear and concise, use correct grammar and punctuation, and correct any spelling errors. This information will be used to populate a report that will be submitted to the EPA. Therefore, it is critical that all information entered into the ENV-RCRA MSGP Corrective Action Report Findings database is correct and meets these criteria.

Step	Action
1	<p>From this web page:</p> <p><a href="http://int.lanl.gov/environment/water/guidance/swmgp.shtml">http://int.lanl.gov/environment/water/guidance/swmgp.shtml</a>, under the heading “Compliance Tools”. Click on the link “<a href="#">MSGP Corrective Action Report Findings Database</a>”</p> <p>Click on “Enter New Corrective Action.”</p>
2	<p>Under the “Corrective Action Header” tab, enter the following:</p> <ul style="list-style-type: none"> <li>• Facility Name by clicking on the “List” tab and selecting a facility.</li> <li>• Date Problem was Identified (mm/dd/yyyy)</li> <li>• Date of Notification to ENV-RCRA (mm/dd/yyyy)</li> <li>• FOD Responsible for CA (Name &amp; Org) by clicking in the box. FOD designations (for example “STO”) and the associated name will come up. Just select the appropriate FOD.</li> </ul> <p><b>NOTE:</b> Contact the MSGP Project Leader at 667-1312 or <a href="mailto:hbensen@lanl.gov">hbensen@lanl.gov</a> if the FOD name or organization is incorrect, so this can be corrected.</p> <ul style="list-style-type: none"> <li>• Describe Specific Evaluation Location (for example “Northeast corner of Building TA-3-66”)</li> <li>• Inspector Z-Number by clicking in the box, which will populate it with your Z number. In most instances, the DEP should be identified as the inspector. Note: If you are entering the CA and are not the DEP, you will have to enter the DEP’s Z number or they will not have the ability to update the corrective action.</li> </ul> <p>Once all of the above information is entered correctly, click “Save” and go</p>

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 11 of 23
	Effective Date: February 28, 2013	

	to Step 3. All boxes identified with a red asterisk are “required fields” and shall be filled out. Note: The system will automatically assign a Corrective Action Report ID number.
3	<p>Click “Go To Corrective Action Details” in the middle of the screen.</p> <p>Under the “Corrective Action Details” tab, enter the following:</p> <ul style="list-style-type: none"> <li>• Identify the condition triggering the need for this review by clicking on the “List” tab and selecting an option or selecting “Other” and entering a description of the condition.</li> <li>• Briefly describe the nature of the problem identified during the inspection (e.g., erosion, damage to a BMP, trash, spill, etc.) and the specific evaluation location.</li> </ul> <p><b>NOTE:</b> Spills or other emergency situations may identify the need for a corrective action that was not identified during an inspection.</p> <ul style="list-style-type: none"> <li>• How the problem was identified by clicking on the “List” tab and selecting an option or selecting “Other” and entering a description of the problem.</li> <li>• Description of the corrective action taken, or to be taken, to eliminate or further investigate the problem (e.g., describe modifications or repairs to control measures, analyses to be conducted, etc.) or if no modifications are needed, the basis for that determination.</li> <li>• Did/will the corrective action require modification of your SWPPP. Type in “Y” for yes and “N” for no.</li> <li>• Date Corrective action was initiated (mm/dd/yyyy)</li> <li>• Date corrective action was completed <b>OR</b> expected completion date (mm/dd/yyyy)</li> </ul> <p><b>NOTE:</b> If the corrective action has not been completed, enter an expected completion date. Do not put a date in both locations.</p> <p>If the corrective action has not been completed, provide the status of the corrective action and describe any remaining steps (including timeframes associated with each step) necessary to complete the corrective action.</p> <p><b>NOTE:</b> This should only be filled out if the corrective action has not been completed. If the corrective action has been completed, enter “N/A.”</p> <p>Make sure to hit the “save” tab in the bottom right hand corner so the corrective action information is retained. If you want to enter more corrective actions, go back to the “Corrective Action Header” tab and press the “Enter New Corrective Action” button in the lower left hand corner of the screen (see step #2). Hitting the “Exit” button will cause you to exit from the system.</p>

	All boxes identified with a red asterisk are “required fields” and shall be filled out. If a date is not included or identified as an expected completion date, ENV-RCRA storm water compliance personnel will enter a completion date of 30 days after the corrective action was identified.
--	---

## 5.7 UPDATING CORRECTIVE ACTIONS

To update a corrective action in the ENV-RCRA MSGP Corrective Action Report Findings database, perform the following steps:

Step	Action
1	From this web page: <a href="http://int.lanl.gov/environment/water/guidance/swmgp.shtml">http://int.lanl.gov/environment/water/guidance/swmgp.shtml</a> , under the heading “Compliance Tools”. Click on the link “ <a href="#">MSGP Corrective Action Report Findings Database</a> ” to access the database and tab down to the corrective action number you want to edit. Click on “Edit.”
2	Navigate to the blank that you will be changing and input the updated information. It is anticipated that most changes will occur relative to updating the status of corrective actions. Save all changes to the information. Remember, you should only have a date under “Date corrective action completed <b>OR</b> the “expected to be completion,” but not both.

## 5.8 VALIDATING CORRECTIVE ACTIONS

ENV-RCRA storm water personnel will periodically validate the information contained in the ENV-RCRA MSGP Corrective Action Report Findings database. To validate a corrective action in the ENV-RCRA MSGP Corrective Action Report Findings database, perform the following steps:

Step	Action
1	From this web page: <a href="http://int.lanl.gov/environment/water/guidance/swmgp.shtml">http://int.lanl.gov/environment/water/guidance/swmgp.shtml</a> , under the heading “Compliance Tools”. Click on the link “ <a href="#">MSGP Corrective Action Report Findings Database</a> ” to access the database.

2	<p>Check all entered fields for a corrective action to ensure that all information is clear, correct, and concise. If not, correct the information by navigating to the information that needs to be changed and making the change. Save all changes to the information.</p> <p>All information shall be validated before running the final annual report.</p>
3	<p>For ENV-RCRA storm water personnel only, under “status” select “void” if the corrective action is a repeat of a previous corrective action or if it is determined not to be a corrective action. This will delete the corrective action from the annual report.</p>

## 5.9 INSTITUTIONAL PERFORMANCE FEEDBACK AND IMPROVEMENT TRACKING SYSTEM (PFITS)

PFITS is the institutional performance and tracking system for identified issues. A corrective action that meets any of the following criteria will be entered into the PFITS system, as deemed necessary.

- Corrective action was not completed by the expected completion date entered into the database.
- No action was taken to remedy an identified issue with a control measure within 14 days of discovery or before the next storm event or as soon as practicable following that storm event (Section 3.3 of the 2008 MSGP).
- Repeat corrective actions or trends identified by ENV-RCRA MSGP storm water personnel.
- Conditions requiring immediate action, where failure to take action would result in pollutants being released to water of the state or an immediate non-compliance with the 2008 MSGP.
- Violations identified by the regulatory authority.
- Other issues as deemed necessary by MSGP storm water personnel.

Once every month, ENV-RCRA storm water personnel will evaluate a summary of open corrective actions in the ENV-RCRA MSGP Corrective Action Report Findings database and using the above criteria will determine which corrective actions, if any, should be transferred into PFITS. When the monthly notification of outstanding corrective actions is sent out, evaluate whether any of the outstanding corrective actions meet the above conditions. Send those that do to the Environmental Protection Division’s Improvement Management Coordinator (IMC) so that she can enter the information into PFITS. The summary report will contain the following information, at a minimum:

- Date the corrective action was identified;
- Person that identified the corrective action;

Title: MSGP Storm Water Corrective Actions	No. ENV-RCRA-QP-022.2	Page 14 of 23
	Effective Date: February 28, 2013	

- A description of the nature of the problem identified and what needs to be done to address the corrective action.
- Whether the corrective action was identified internal to LANL or External to LANL.

## 5.10 NOTIFICATIONS FOR NEW AND OVERDUE CORRECTIVE ACTIONS

When a new corrective action is entered into the ENV-RCRA MSGP Corrective Action Report Findings database, the FOD, ESH&Q Manager, Operations Manager, inspector (usually the DEP) and ENV-RCRA MSGP storm water personnel are notified automatically by e-mail (unless the corrective action is closed the same day it is entered). This will assist the FOD, ESH& Q Managers, Operations Managers and the DEPs with keeping track of new corrective actions.

An automatic e-mail is sent the first of each month notifying the FOD, ESH&Q Manager, Operations Manager and DEPs of all overdue corrective actions for their industrial facilities. The Environmental Protection Division Leader and ENV-RCRA Group Leader receive a web link that contains a bar graph showing corrective actions 30 to 60 days overdue, 60 to 90 days overdue, 90 days to 1 year overdue, and those greater than a year overdue. In addition, they receive a link with summary information on each corrective action overdue sorted by FOD.

## 7.0 DEFINITIONS

Best Management Practice (BMP): Schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of “waters of the United States.” BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. (*40 CFR Part 122.2*)

Control Measure: Any BMP or other method (including effluent limitations) used to prevent or reduce the discharge of pollutants to waters of the United States.

CA: Corrective Action

DEP: Deployed Environmental Professional

EPA: Environmental Protection Agency

FOD: Facility Operations Director

MSGP: Multi-Sector General Permit

SWPPP: Storm Water Pollution Prevention Plan

<b>B. GENERAL INSPECTION FINDINGS</b>	
1. As part of this comprehensive site inspection, did you inspect all potential pollutant sources, including areas where industrial activity may be exposed to stormwater? <input type="checkbox"/> YES <input type="checkbox"/> NO If NO, describe why not:	
<b>NOTE:</b> Complete Section C of this form for each industrial activity area inspected and included in your SWPPP or as newly identified in B.2 or B.3 below where pollutants may be exposed to stormwater.	
2. Did this inspection identify any stormwater or non-stormwater outfalls not previously identified in your SWPPP? <input type="checkbox"/> YES <input type="checkbox"/> NO	
If YES, for each location, describe the sources of those stormwater and non-stormwater discharges and any associated control measures in place.	

NPDES Permit Tracking No.:  
| | | | | | | | | | | |3. Did this inspection identify any sources of stormwater or non-stormwater discharges not previously identified in your SWPPP? ☐ YES ☐ NO

If YES, describe these sources of stormwater or non-stormwater pollutants expected to be present in these discharges, and any control measures in place:

4. Did you review stormwater monitoring data as part of this inspection to identify potential pollutant hot spots? ☐ YES ☐ NO ☐ NA, no monitoring performed

If YES, summarize the findings of that review and describe any additional inspection activities resulting from this review:

5. Describe any evidence of pollutants entering the drainage system or discharging to surface waters, and the condition of and around outfalls, including flow dissipation measures to prevent scouring:

6. Have you taken or do you plan to take any corrective actions, as specified in Part 3 of the permit, since your last annual report submission (or since you received authorization to discharge under this permit if this is your first annual report), including any corrective actions identified as a result of this annual comprehensive site inspection?  
☐ YES ☐ NO

If YES, how many conditions requiring review for correction action as specified in Parts 3.1 and 3.2 were addressed by these corrective actions?

| |

**NOTE:** Complete the attached Corrective Action Form (Section D) for each condition identified, including any conditions identified as a result of this comprehensive stormwater inspection.

**C. INDUSTRIAL ACTIVITY AREA SPECIFIC FINDINGS***Complete one block for each industrial activity area where pollutants may be exposed to stormwater. Copy this page for additional industrial activity areas.*

In reviewing each area, you should consider:

- Industrial materials, residue, or trash that may have or could come into contact with stormwater;
- Leaks or spills from industrial equipment, drums, tanks, and other containers;
- Offsite tracking of industrial or waste materials from areas of no exposure to exposed areas; and
- Tracking or blowing of raw, final, or waste materials from areas of no exposure to exposed areas.

INDUSTRIAL ACTIVITY AREA \_\_\_\_\_:

1. Brief Description:

2. Are any control measures in need of maintenance or repair?

☐ YES ☐ NO

3. Have any control measures failed and require replacement?

☐ YES ☐ NO

4. Are any additional/revised control measures necessary in this area?

☐ YES ☐ NO

If YES to any of these three questions, provide a description of the problem: (Any necessary corrective actions should be described on the attached Corrective Action Form)

INDUSTRIAL ACTIVITY AREA \_\_\_\_\_:

1. Brief Description:

#### D. CORRECTIVE ACTIONS

Complete this page for each specific condition requiring a corrective action or a review determining that no corrective action is needed. Copy this page for additional corrective actions or reviews.

Include both corrective actions that have been initiated or completed since the last annual report, and future corrective actions needed to address problems identified in this comprehensive stormwater inspection. Include an update on any outstanding corrective actions that had not been completed at the time of your previous annual report.

1. Corrective Action #			of			for this reporting period.
------------------------	--	--	----	--	--	----------------------------

2. Is this corrective action:

- ☐ An update on a corrective action from a previous annual report; or
- ☐ A new corrective action?

3. Identify the condition(s) triggering the need for this review:

- ☐ Unauthorized release or discharge
- ☐ Numeric effluent limitation exceedance
- ☐ Control measures inadequate to meet applicable water quality standards
- ☐ Control measures inadequate to meet non-numeric effluent limitations
- ☐ Control measures not properly operated or maintained
- ☐ Change in facility operations necessitated change in control measures
- ☐ Average benchmark value exceedance
- ☐ Other (describe): \_\_\_\_\_

4. Briefly describe the nature of the problem identified:

5. Date problem identified: 

--	--	--	--	--	--	--	--

6. How problem was identified:

- ☐ Comprehensive site inspection  
☐ Quarterly visual assessment  
☐ Routine facility inspection  
☐ Benchmark monitoring  
☐ Notification by EPA or State or local authorities  
☐ Other (describe): \_\_\_\_\_

7. Description of corrective action(s) taken or to be taken to eliminate or further investigate the problem (e.g., describe modifications or repairs to control measures, analyses to be conducted, etc.) or if no modifications are needed, basis for that determination.

9. Did/will this corrective action require modification of your SWPPP? ☐ YES ☐ NO

9. Date corrective action initiated:			/		/		
--------------------------------------	--	--	---	--	---	--	--

10. Data correction action completed:  /  /  or expected to be completed:  /  /

11. If corrective action not yet completed, provide the status of corrective action at the time of the comprehensive site inspection and describe any remaining steps (including timeframes associated with each step) necessary to complete corrective action:

NPDES Permit Tracking No. \_\_\_\_\_

#### E. ANNUAL REPORT CERTIFICATION

### 1. Compliance Certification

Do you certify that your annual inspection has met the requirements of Part 4.2 of the permit, and that, based upon the results of this inspection, to the best of your knowledge, you are in compliance with the permit? ☐ YES ☐ NO

If NO, summarize why you are not in compliance with the permit:

## 2. Annual Report Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Installing, Setting Up, and Operating ISCO Samplers for the MSGP	No. ENV-CP-QP-045.1	Page 4 of 26
	Effective Date: September 5, 2013	

## 1.0 PURPOSE

This procedure describes the installation, setup, programming, and operation of Teledyne ISCO Avalanche and Model 3700 full-size portable automated samplers used to collect storm water runoff samples for the Multi-Sector General Permit (MSGP).

## 2.0 SCOPE

This procedure applies to all ENV-CP technical staff and contractor personnel conducting installation, operation, maintenance and sampling activities at single stage stations used for monitoring under the MSGP.

### 2.1 HAZARD REVIEW

Hazards in the work described in this procedure are controlled thorough site specific [IWDs](#). The hazard level of the activities in this procedure is **moderate**.

## 3.0 RESPONSIBILITIES

The following personnel require training before implementing this procedure:

- This procedure applies to all ENV-CP MSGP storm water compliance personnel conducting installation, operation, maintenance and sampling activities at MSGP single stage monitoring stations.

The training method for this procedure is “self-study” (reading). For ENV-CP staff, this is documented in accordance with [ENV-DO-QP-115, \*Personnel Training\*](#). Other participating groups may require training documentation pursuant to local procedures.

Actions specified within this procedure, unless proceeded with “should” or “may,” are to be considered mandatory (i.e., “shall”, “will”, “must”).

### 3.1 PREREQUISITES

Personnel performing this procedure will be familiar with the most current versions of the following procedures and operation manuals:

- ENV-CP MSGP Sampling and Analysis Plan for the current monitoring year
- Manual for Teledyne ISCO Sampler Model 3700.
- Manual for Teledyne ISCO Avalanche refrigerated sampler
- Facility/FOD specific IWDs for the MSGP

## 4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT

The following records are generated as a result of this procedure and are maintained in accordance with [ENV-DO-QP-110, \*Records Management Program\*](#) with the originals on file at ENV-CP offices:

Completed work orders for:

Installing, Setting Up, and Operating ISCO Samplers for the MSGP	No. ENV-CP-QP-045.1	Page 5 of 26
	Effective Date: September 5, 2013	

- LANL MSGP ISCO Sampler Installation Form 045-1(Attachment 1)
- LANL MSGP ISCO Sampler Activation Form 045-3 (Attachment 6)
- LANL MSGP ISCO Sampler Winter Shutdown 045-5 (Attachment 9)
- LANL MSGP ISCO Sampler Decommission 045-6 (Attachment 10)

## 5.0 WORK PROCESSES

The discharge of storm water from industrial facilities at Los Alamos National Laboratory (LANL, the Laboratory) is regulated under the National Pollutant Discharge Elimination System (NPDES) *Multi-Sector General Permit for Storm Water Discharges Associated with Industrial Activity* (MSGP). The current MSGP became effective on September 29, 2008 pursuant to 73 FR 56572. The Laboratory's MSGP permit coverage (Permit Tracking No. NMR05GB21) requires storm water quality monitoring to evaluate the overall effectiveness of control measures. ISCO samplers coupled with Model 1640 sampler actuators are used at MSGP Program monitoring stations. Refrigerated (Avalanche) and/or non-refrigerated (Model 3700) samplers may be deployed; and may be configured with multi-battery arrays, solar panels, and surge protectors.

### 5.1 EQUIPMENT AND TOOLS

Ensure the following equipment is available in the field vehicle:

- Copy of this procedure
- Copy of the appropriate Integrated Work Document(s) (IWDs)
- Charged spare battery(ies)
- Battery voltage tester
- Spare tubing (pump, suction, discharge types, sampler specific)
- Spare sample bottles
- Shovels
- Wooden stakes
- Plastic wire "zip" ties
- Cell phone (only government cell phones with the battery removed are allowed in secure areas)
- Appropriate tools (including insulated tools for electrical work) in tool box
- Issued Work Orders and associated forms
- Necessary access and station keys
- Ziploc® plastic storage bags
- Tape measure
- Sturdy hiking boots or steel toed shoes with soles that grip

The time on the ISCO sampler clock must be verified upon arrival at the site. The ISCO clocks must be set to Mountain Standard Time (MST) at all times, with no daylight saving time adjustment. Cellular phones can be used to verify the time.

Installing, Setting Up, and Operating ISCO Samplers for the MSGP	No. ENV-CP-QP-045.1	Page 6 of 26
	Effective Date: September 5, 2013	

## 5.2 ISCO SAMPLER INSTALLATION

Step	Action
1	Work Orders are issued for all field operations at individual MSGP monitored outfalls. Obtain the Work Order with the LANL MSGP ISCO Sampler Installation Form 045-1 (Attachment 1). The Work Order specifies the MSGP outfall and target date for the work to be performed. An outfall-specific equipment list with specifications and configuration settings is provided on each Work Order.
2	<p>Deploy the ISCO sampler and charged battery on level ground above the flood plain. Often, large tool/storage boxes (Greenlee™) are used for equipment protection in the field.</p> <p><b>NOTE:</b> These boxes are locked. Therefore, a key should be obtained prior to accessing them.</p> <p>The sampler should be as level as possible to allow effective sample collection. Verify/record the ISCO sampler serial number and the battery tracking number(s) on the Work Order.</p>
3	Install the separate protective battery box for the charged battery (follow manufacturer's instructions).
4	<p>Determine the bottle set configuration from the equipment list on the Work Order.</p> <ul style="list-style-type: none"> <li>• If a Model 3700 sampler is indicated, install the correct distributor arm (has either "12" or "24" embossed on bottom at outlet).</li> <li>• For an Avalanche sampler, attach either the discharge tube guide (single bottle configuration) or the distributor arm (multi-bottle configuration) and the appropriate bottle adapter plate. If an adapter plate is not available, the inside of the sampler may need to be configured by hand (i.e., add form) to prevent bottles from moving around during a sampling event.</li> <li>• Install required bottles and retaining devices in the sampler base.</li> <li>• Check that the end of the discharge tubing does not extend below the bottom face of the distributor arm (where it could snag the bottle tops and jam as the arm advances through the bottle sequence).</li> <li>• Remove and place the clean bottle caps in a new Ziploc® plastic bag.</li> </ul>
5	Attach a length (in whole foot increments) of 3/8-inch diameter Teflon suction line to the sampler intake line and anchor as needed for the Outfall location. Measure and record (for later programming steps) the tubing length used. Route the sample tubing downslope from the sampler to the intake point so that there is a continuous slope with no valleys that could retain water between sample intervals.
6	<p>Install the actuator:</p> <ul style="list-style-type: none"> <li>• Anchor a stake to the channel bottom in the main flow of the outfall discharge.</li> <li>• Attach the sampler intake tube and the 1640 liquid level detector (actuator) to the stake.</li> <li>• Position the actuator at least ½ inch above the intake tube to ensure there is enough water to submerge the intake when the sampler is activated.</li> <li>• Connect the actuator to the sampler using the cable connector provided by the manufacturer.</li> <li>• If necessary, use a gravel bag to create a small pooling area for the actuator and sampler intake to sit in.</li> </ul> <p>The actuator height above the channel bottom is established using professional judgment. For example, the intake may be positioned 1 inch or less above the bottom of low-flowing wide channels, but higher than 1 inch in a high-flowing narrow channel.</p>

Installing, Setting Up, and Operating ISCO Samplers for the MSGP	No. ENV-CP-QP-045.1	Page 7 of 26
	Effective Date: September 5, 2013	

7	<p><b>NOTE:</b> You must be a trained electrical worker and have completed all required courses in Training Plan #2876 to conduct this step.</p> <p>Connect the sampler to the power source, either a 12 Volt 110 A-h deep cycle lead acid battery or other power source such as a multi-battery array coupled with a solar panel, as appropriate. Record the battery tracking numbers in the equipment list section of the Work Order. (Refer to Attachments 2 and 3 for the wiring diagram for Avalanche sampler installation.)</p>
---	---

### 5.3 CONFIGURING ISCO 3700 SAMPLERS

Step	Action
1	When a new ISCO 3700 sampler is being installed, configure the sampler in accordance with the steps contained in this section. Follow the project-specific configuration settings as indicated on the Work Order and given in Attachment 4, ISCO 3700 Configuration Settings.
2	Turn on the sampler by pressing the “On” button.
3	Press the “Enter/Program” button.
4	Select “Configuration”.
5	Set the configuration parameters in accordance with the guidance in Attachment 4, ISCO 3700 Configuration Settings. After each selection is made, press the “Enter” button to allow the next configuration parameter to be displayed on the screen.
6	<p>After the programming is complete, select “Run diagnostics” and press “Enter” to run the system diagnostic test. The diagnostic tests include the following:</p> <ul style="list-style-type: none"> <li>• RAM and ROM test</li> <li>• LCD test</li> <li>• Pump test (“OFF/ON” number should be between 50 and 200 for a successful test)</li> <li>• Distributor test -- select “YES” to run test. Test will move the distributor to Position 24 and then return it to Position 1.</li> </ul>
7	Following the diagnostic tests, “Reinitialize Controller” will be displayed. Select “No” and press “Enter.” <u>Do not select “Yes.”</u> If “Yes” is selected, the sampler will reset a number of configuration and program settings to the factory default values.
8	To leave the configuration sequence, use the “Exit configuration” and press “Yes” or press the “Enter/Program” key.

### 5.4 PROGRAMMING ISCO 3700 SAMPLERS

Step	Action
1	Follow the steps in this process to program a new ISCO or to confirm the program settings are correct for a specific location. Follow the project-specific program settings as indicated on the

	work order and given in Attachment 5, ISCO 3700 Program Sequence.
2	Turn on the sampler by pressing the “ON” button
3	Press the “Enter/Program” button.
4	Select “Program”.
5	Set the program parameters in accordance with the guidance on Attachment 5, ISCO 3700 Program Sequence. After each selection is made, press the “Enter” button to allow the next configuration parameter to be displayed on the screen.
6	Set the switch on the actuator to “Latch.”
7	<b>NOTE:</b> You must be a trained electrical worker and have completed all required courses in Training Plan #2876 to conduct this step.
8	Complete the responses for the sampler installation tasks listed on the Work Order. Sign and date the Work Order and ensure all items contained within it have been completed.

## 5.5 ACTIVATING ISCO 3700 SAMPLERS

Step	Action
1	<p>Follow the steps in this section when a Work Order is received to activate a sampler (generally at the beginning of a field season or at the beginning of the next quarter after the last quarterly monitoring sample was obtained).</p> <p>Note: The MSGP monitoring quarters are as follows</p> <ul style="list-style-type: none"> <li>• April 1 through May 31</li> <li>• June 1 through July 31</li> <li>• August 1 through September 30, and</li> <li>• October 1, through November 30.</li> </ul>
2	<p>Obtain the Work Order with the LANL MSGP Sampler Activation Form 045-3 (Attachment 6). The Work Order specifies the MSGP Outfall and target date for the work to be performed. An Outfall-specific equipment list with specifications and configuration settings is provided on each Work Order.</p> <p><b>NOTE:</b> You must be a trained electrical worker and have completed all required courses in Training Plan #2876 to conduct this step.</p> <p>If not already installed, install and hook up the charged battery.</p> <p>If a battery is already in place, use the voltage tester to check for minimum voltage of 11.7 volts. If the voltage is lower, replace the battery with a charged battery.</p>
3	Turn the sampler ON. “Program halted” will be displayed; press the Enter/Program button to enter program/configure sequence.
4	Check the configuration and programming parameters to ensure they are still correct for the specific installation (see Attachment 4 and 5 for the correct parameters).
5	Check integrity and condition of sampler tubing, actuator, wiring, etc., to ensure sampler will properly collect a sample.

6	To test the integrity of the tubing, press “Pump forward” to turn on pump and test for suction at the tubing intake. Press “Stop” to turn off pump. If no suction is felt at the intake, check the integrity of the tubing and replace as necessary.
7	To activate the sampler, press “Start sampling” and “Enter” twice.
8	Ensure the sampler indicates “Sampler Inhibited”.
9	Complete the responses for the sampler activation tasks listed on the Work Order. Sign and date the Work Order and ensure all items contained within it have been completed.

## 5.6 CONFIGURING ISCO AVALANCHE SAMPLERS

Step	Action
1	When a new ISCO Avalanche sampler is being installed, configure the sampler in accordance with the steps contained in this section. Follow the project-specific configuration settings as indicated on the work order and given in Attachment 8, ISCO Avalanche Configuration Settings.
2	Turn on the sampler by pressing the “Standby” key.
3	From the main menu, select Other Functions, to access the menus and select options given in Attachment 8.
4	Set the configuration parameters in accordance with the guidance on Attachment 8, ISCO Avalanche Configuration Settings.
5	After the programming is complete, select “Run diagnostics” and press “Enter” to run the system diagnostic test. These include the following: <ul style="list-style-type: none"> <li>• RAM and ROM test</li> <li>• Pump test (“ON/OFF” ratio should be between 0.80 and 1.25 for a successful test)</li> <li>• Distributor test -- select “YES” to run test. Test will move the distributor to Position 14 and then return it to Position 1.</li> </ul>
6	Following the diagnostic tests, “Reinitialize Controller” will be displayed. Select “No” and press the “Enter” key. (If “Yes” is selected, the sampler will reset a number of configuration and program settings to the factory default values).
7	If a 700 series module (e.g., pH) is to be installed, consult the equipment manufacturer’s manual for installation instructions. <b><u>NOTE:</u></b> The pH module is only required at the Asphalt Batch Plant.
8	Complete the responses for the sampler installation tasks listed on the Work Order. Sign and date the Work Order and ensure all items contained within it have been completed.

## 5.7 PROGRAMMING ISCO AVALANCHE SAMPLERS

Step	Action
1	Follow the steps in this process to program a new ISCO or to confirm the program settings are correct for a specific location and bottle configuration. Follow the project-specific program settings as indicated on the work order and given in Attachment 8, ISCO Avalanche Program Sequence.
2	Turn on the sampler by pressing the “Standby” key.
3	Press the “Program” button.
4	Select the current program to review settings, or choose “Select New Program” to create a new program with different settings.
5	Select the current program to review settings, or choose “Select New Program” to create a new program with different settings.
6	At the prompt “Programming complete, run this program now?” , select “Yes” if sampler is scheduled to be active, and “No” if sampler is in stand down.
7	Set switch on actuator to “Latch.”
8	Complete the responses for the sampler installation tasks listed on the Work Order. Sign and date the Work Order and ensure all items within it have been completed.

## 5.8 ACTIVATING ISCO AVALANCHE SAMPLERS

Step	Action
1	<p>Follow the steps in this section when a Work Order is received to activate a sampler (generally at the beginning of a field season or at the beginning of the next quarter after the last quarterly monitoring sample was obtained).</p> <p>Note: The MSGP monitoring quarters are as follows</p> <ul style="list-style-type: none"> <li>• April 1 through May 31</li> <li>• June 1 through July 31</li> <li>• August 1 through September 30, and</li> <li>• October 1, through November 30.</li> </ul>
2	<p><b>NOTE:</b> You must be a trained electrical worker and have completed all required courses in Training Plan #2876 to conduct this step.</p> <p>If not already installed, install and hook up the charged battery(ies).</p> <p>If a battery is already in place, use the voltage tester to check for minimum voltage of 11.7 volts. If the voltage is lower, replace the battery with a charged battery.</p>
3	Turn on sampler power. From the main menu, select “Program” and the “Enter” key to enter programming sequence, and “Other Functions” to enter the configuration settings.
4	Check the programming/configuration parameters to ensure they are still correct for the specific installation – follow the two preceding sections for the steps and see Attachment 7 and 8 for the correct parameters.
5	Check integrity and condition of sampling tubes, actuator, wiring, etc., to ensure sampler

	will properly collect a sample.
6	From the main menu, select “Other Functions” ► “Manual Functions” ► “Operate Pump” to perform a manual suction test. To test the integrity of the tubing, press “Pump forward” to turn on pump and test for suction at the tubing intake. Press “Stop” to turn off pump.  If no suction is felt at the intake, check the integrity of the tubing and replace as necessary.
7	Reset the actuator by toggling the switch to “Reset” then back to “Latch.” To activate the sampler, ensure the correct program name is displayed on the main menu and select “Run”.
8	Ensure the sampler indicates “Program Disabled”.
9	Note: The Avalanche refrigeration system is active any time the controller is powered. This is true for all states (including OFF), except for the time between entering RUN and the completion of the first sample, and when the pump is running. To conserve power, the Avalanche assumes that during this time there is no sample liquid to cool.
10	Ensure that all items on the Work Order have been completed.

## 5.9 STANDING DOWN OR WINTERIZING SAMPLERS

Step	Action
1	Follow the steps in this section when a Work Order is received to turn off (“stand down”) a sampler (generally at the end of a field season, which is November 30, or to disable a sampler for a certain time period after a sample was collected). Fill out the LANL MSGP ISCO Sampler Winter Shut-Down Form in Attachment 9.
2	ISCO 3700: Turn off power.  ISCO Avalanche: The Avalanche refrigeration system is active any time the controller is powered. This is true for all states (including OFF), except for the time between entering RUN and the completion of the first sample, and when the pump is running. To conserve power, the Avalanche assumes that during this time there is no sample liquid to cool. <b>NOTE:</b> To ensure that the refrigeration system does not activate during an intended stand down, disconnect the sampler from the power source.
3	Remove the battery and return it to the storage compound at TA-64 or other specified location identified by ENV-CP MSGP stormwater compliance personnel. Store cables inside the Greenlee™ box. If the actuator and tubing are not contained within conduit, disconnect these and place them in the box. Close sampler.  Avalanche samplers must not be left in place for the winter, and are required to be returned to ENV-CP’s storage shed.
4	Ensure that all items on the Work Order have been completed.

## 5.10 SAMPLER RESET AND RE-INITIALIZATION AFTER SAMPLE COLLECTION

Step	Action
1	Follow <a href="#">ENV-CP-QP-047, Inspecting Storm Water Runoff Samplers and Retrieving Samples for the MSGP</a> for collecting samples from an ISCO and installing new bottles so it is ready to collect new samples.
2	<p>After collecting samples and resetting the sampler, follow instructions on sample collection Work Order, the updated sample tracking log or confer with the MSGP Project Lead regarding whether the sampler should be disabled.</p> <p>If sampler is to be deactivated, follow the steps specific to each sampler provided in the preceding section.</p> <p>If an ISCO 3700 sampler is to be left activated, reset the actuator by toggling the switch to “Reset” then back to “Latch”, and press “Start sampling” and “Enter” twice. Ensure the sampler display indicates “Sampler Inhibited”:</p> <p>If an ISCO Avalanche sampler is to be left activated, reset the actuator by toggling the switch to “Reset” then back to “Latch.” From the main menu, verify the correct program name is displayed and select “Run.” Ensure the sampler display indicates “Program Disabled.”</p>

## 5.11 REMOVING A SAMPLER

Step	Action
1	Follow the steps in this process when a Work Order is received to un-install or remove a sampler. Fill out the LANL MSGP ISCO Sampler Decommission Form in Attachment 10.
2	Disconnect all equipment and remove it from the site. Return the equipment to the ENV-CP Storage Shed or other location specified by MSGP storm water compliance personnel.
3	Dispose of all equipment components that contacted samples (tubing, bottles, etc.) as waste according to applicable waste management procedure. For assistance, contact the Waste Management Coordinator for TA-59.
4	Ensure that all items on the Work Order have been completed.

"I confirm the information as recorded is true, accurate and complete."

Verify the equipment list below. Make corrections as required and fill in missing information (e.g., serial numbers).

Equipment	Manufacturer	Model	Serial No.	Specification	Configuration
Actuator	ISCO	1640	210J01660		
Charge Controller	Xantrex	C-12	B20037667		
ISCO 3700 Sampler	Teledyne	3700	198H00978	Bottle Set	12c- 1 1L Glass, 11 1L Poly
ISCO 3700 Sampler	Teledyne	3700	198H00978	Program	Time / Multiplex no delay
ISCO Avalanche Sampler	Teledyne	Avalanche	210J00066	Bottle Set	14 950 mL Poly
ISCO Avalanche Sampler	Teledyne	Avalanche	210J00066	Program	1-Part, 14 Bottles, 950 mL
Pb-Acid Battery	Universal	110 A-h	MSGP-110-0311-07	Voltage	> 11.7 V
Pb-Acid Battery	Universal	110 A-h	MSGP-110-0311-08	Voltage	> 11.7 V
Pb-Acid Battery	Universal	110 A-h	MSGP-110-0311-09	Voltage	> 11.7 V
Solar Panel	SunWize	SW-S85P	11004467		

## ISCO Sampler Tasks

Note: If "No" provide correct information or explanation.

Deploy battery(ies) if not listed in equipment list above. Record serial numbers of battery(ies) installed.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Deploy Avalanche sampler matching serial number listed in equipment list above for installation.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Deploy and install pH and Temperature Probe listed in equipment list above and probe saturation reservoir.	<input type="checkbox"/> Yes <input type="checkbox"/> No
Refer to the wiring diagram in ENV-QP-045.0 for the solar panel, battery configuration, and type of sampler being installed. Has wiring been completed according to instructions?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is the sampler installed according to steps in ENV-QP-045.0?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is a Greenlee box used?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Are electrical connections secure?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Record battery voltage(s). Voltage(s) > 11.7 V ?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is the sampler physically configured for the types and number of bottles specified above (i.e., correct carousel, base, arm)?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is the sampler programmed correctly per ENV-QP-045.0 for the program / bottle set specified above?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does sampler pass the ISCO diagnostics test ?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does sample tubing pass suction test?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Is sampler ON upon departure?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Does ISCO display either "Sampler Inhibited" or "Program Disabled"?	<input type="checkbox"/> Yes <input type="checkbox"/> No
Has the actuator switch been reset to "Latch"?	<input type="checkbox"/> Yes <input type="checkbox"/> No
If any maintenance completed, check YES and describe.	<input type="checkbox"/> Yes <input type="checkbox"/> No
If any follow-on maintenance is required, check YES and describe.	<input type="checkbox"/> Yes <input type="checkbox"/> No

	Effective Date: May 14, 2013	

## 1.0 PURPOSE

This procedure describes the process for inspecting ISCO storm water runoff samplers and retrieving storm water runoff samples from all locations where the Los Alamos National Laboratory (LANL) conducts storm water sampling activities for the Multi-Sector General Permit (MSGP).

## 2.0 SCOPE

This procedure applies to the ENV-RCRA technical staff and subcontractor personnel conducting activities at single stage stations used for monitoring under the MSGP.

### 2.1 HAZARD REVIEW

Hazards in the work described in this procedure are controlled thorough site specific [IWDs](#). The hazard level of the activities in this procedure is moderate.

## 3.0 RESPONSIBILITIES

The following personnel require training before implementing this procedure:

- ENV-RCRA technical staff and subcontract or other personnel who inspect storm water samplers and retrieve storm water samples for the MSGP.

The training method for this procedure is “self-study” (reading). For ENV-RCRA staff, this is documented in accordance with [ENV-DO-QP-115, Personnel Training](#). Other participating groups may require training documentation pursuant to local procedures.

Actions specified within this procedure, unless proceeded with “should” or “may,” are to be considered mandatory (i.e., “shall”, “will”, “must”).

### 3.1 PREREQUISITES

Personnel performing this procedure will be familiar with the most current versions of the following procedures and operation manuals:

- ENV-RCRA MSGP Sampling and Analysis Plan for the current monitoring year.
- Manual for Teledyne ISCO Sampler model 3700.
- Manual for Teledyne ISCO Avalanche sampler

## 4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT

The following records are generated as a result of this procedure and are maintained in accordance with [ENV-DO-QP-110, Records Management Program](#) with the originals on file at ENV-RCRA offices:

- Completed work order for ISCO Sampler Inspection and Sample Retrieval and Collection forms (example in Attachment 2).

Inspecting Storm Water Runoff Samplers and Retrieving Samples for the MSGP	No. ENV-RCRA-QP-047.1	Page 5 of 14
	Effective Date: May 14, 2013	

## 5.0 WORK PROCESSES

ISCO samplers are used to collect storm water runoff for Multi-Sector General Permit (MSGP) Program stations. ISCOs are designed to automatically collect water when the water surface is high enough to trigger the actuator and fill the sample bottles. Field personnel are required to inspect the sampling station while retrieving water samples and at other intervals determined by the project or as directed by work orders issued by project personnel.

A LANL Project Leader is the primary person with responsibility for the steps in this procedure. ENV-RCRA personnel will be appointed with responsibility for a subset of sampling stations.

If subsequent rain events occur before all sampler locations have been visited after the first rain event, finish the route to collect the first-event samples (safety permitting).

Inspections may be discontinued during periods or conditions that make sites dangerous for worker safety or prevent personnel from safely accessing sites (e.g., weather-related events such as flash floods, flooding, lightning, wildfires, hail, icy roads, deep snow, and LANL operations such as shots or burns at the OBOD sites).

### 5.1 EQUIPMENT AND TOOLS

Ensure the following equipment is available in the field vehicle:

- Copy of this procedure
- Copy of the Integrated Work Documents (IWDs)
- Charged spare battery(ies)
- Battery voltage tester
- Spare tubing (pump, suction, discharge types, sampler specific)
- Spare/replacement sample bottles (glass and poly)
- Shovel
- Wooden stakes
- Plastic wire “zip” ties
- Cell phone (only government cell phones with batteries removed are allowed in secure areas)
- Appropriate tools in tool box
- Issued Work Orders and associated forms
- Necessary access and station keys
- Coolers with ice or Blue Ice®
- Expanded Site Field Maps
- Nitrile gloves
- Paper Towels
- Marker pen (permanent, waterproof)
- Ball point pen
- Zip lock bags
- Safety glasses with side shields
- Chain of custody seals
- Sturdy hiking boots or steel toed shoes with soles that grip

	Effective Date: May 14, 2013	

## 5.2 PREPARING FOR FIELDWORK

Once the work orders have been approved, the following steps should be followed to prepare for fieldwork:

Step	Action
1	Receipt of a work order indicates that sampler inspections have been approved by the LANL Project Leader. Schedule work to be completed by the target date appearing on the work order(s).
2	Distribute work order(s) to field personnel. A sample Work Order form is provided in Attachment 1, ISCO Sampler Inspection and Sample Retrieval Form.
3	Inform (e.g., by e-mail) the Field Operations designee, as specified in the IWD, of the schedule for sampler inspection work and locations up to a week (preferred) before but no later than the day before (for minor changes) to be added to the appropriate plan of the day.
4	For work at sites operated by Weapons Facility Operations or Nuclear Environmental Sites, notify the appropriate access control before traveling to those sites. The IWD Part II (2101 Form) addresses specific requirements and training for these sites.
5	Obtain any necessary additional paperwork before conducting this work, including IWD's, and excavation permits (if necessary).
6	Gather the required equipment (see section above) for the work to be done.
7	Set watch(s) to the precise Mountain Standard (not daylight saving) Time. This can be done by logging on to the time page at <a href="http://www.time.gov">www.time.gov</a> (or click on the clock icon on the lab's internal home page). When at the site, the clock time on the ISCO sampler needs to be verified. Clocks must be set to Mountain Standard Time at all times, with no daylight saving time adjustment.

## 5.3 INSPECTING THE SAMPLER

The following table details the inspection requirements for the sampler:

Step	Action
1	If conditions prevent a sampler inspection, document the conditions on the work order and notify the Project Lead or designee within 24 hours. Multiple attempts can be documented on the original inspection work order up to the target date. After the target date, return work order to the ENV-RCRA Storm Water Data Stewards Team for reissuance (if necessary).
2	Item 1: on work order (see example in attachment 2): Enter the date and time inspection and water retrieval is performed and the name(s) and Z number(s) of the field personnel performing the work in the upper right corner of the work order.
3	Item 2: Verify and document the sampler is ON and its condition upon arrival by checking the "Yes" or "No" box. Explain any non-functional status in third column.
4	Item 3: Verify and document the ISCO programming displays by checking the "Yes" or "No" box in second column. <ul style="list-style-type: none"> <li>For ISCO 3700 samplers = "Sampler Inhibited"</li> </ul>

Inspecting Storm Water Runoff Samplers and Retrieving Samples for the MSGP	No. ENV-RCRA-QP-047.1	Page 7 of 14
	Effective Date: May 14, 2013	

	<p>OR</p> <ul style="list-style-type: none"> <li>For Avalanche samplers = “Program Disabled”</li> </ul> <p>If No, repair or describe (e.g., “Done X samples”, or “sampler off”, etc). If more space is needed, continue notes in the “Additional Notes” section at the bottom of the page.</p>
5	Don nitrile gloves and safety glasses.
6	Remove the lid from the sampler.
7	<p>Item 4: If water was collected, check “Yes” and collect the water according to the steps in “Retrieving Storm Water Runoff Samples” below.</p> <p>Note: Complete the required MSGP Visual Assessment form to document the water appearance (foam, sheen, etc.). Ensure this form is submitted to the appropriate MSGP project personnel (see item 11).</p> <p>If No, describe (e.g., “no water collected”, “sampler off”) in the third column; check “No” for Item 4.</p>
8	<p>Item 5: Verify and document the sampler is set to the correct Mountain Standard Time +/- no more than 1 minute by checking the “Yes” or “No” box in the second column. If the sampler is set incorrectly, reprogram for the correct Mountain Standard Time. Describe the work performed and correction applied (e.g., “ISCO clock was X minutes slow”) in the third column.</p>
9	<p>Item 6: Review the Sampling Results report and document any error messages from the sampler display by checking the “Yes” or “No” box. If a message is displayed, record the message in the “Comments” section on page 2 next to the sample bottle being filled when the problem occurred.</p> <p>If there is no indication of flow and the sampler triggered due to a non-flow event (e.g., animal, tumbleweed), indicate this in the third column.</p>
10	<p>Item 7: For the Avalanche sampler equipped with an ISCO 701 pH Module, record the pH measurement taken at the time of Bottle 1 from the Combined Results report.</p>
11	<p>Item 8: For Avalanche samplers only, and if water was collected, check “Yes” and record the refrigerator temperature (°C) upon arrival. If no water was collected, or unable to review temperature, check “No” and describe in column 3 (e.g., no sample, dead battery).</p>
12	<p>Item 9: Verify and document whether sample volumes were retrieved by checking the “Yes” or “No” box. Refer to the volume retrieval instructions on page 2 of work order.</p> <p>Record the volume retrieved in third column.</p>
13	<p>Item 10: If water was collected, perform a visual assessment of the water using the MSGP program visual assessment form (not included in this procedure). Document whether a visual assessment was performed by checking the “Yes” or “No” box.</p>
14	<p>Item 11: Verify and document sample station equipment, model, serial number, actuator height, sampler program, and bottle configuration match the header on the work order page 1 by checking the “Yes” or “No”. If they do not match the data on the work order, ensure you are at the correct location. If the location is verified, check “No” and update inaccurate information.</p>
15	<p>Item 12: Verify and document power supply function. Use the voltage tester to check the voltage of the battery and record the voltage. Check “Yes” or “No” to indicate if battery voltage is acceptable (<math>\geq 11.7</math> V for non-floating charged batteries at ISCO 3700 samplers and <math>\geq 11.0</math> for floating-charged batteries at Avalanche samplers as described in <a href="#">ENV-RCRA-QP-045</a>).</p>
16	<p>Item 13: Verify and document the sampler passed the diagnostics test by checking the “Yes” or “No” box. Directions for running the diagnostics test is provided in ENV-RCRA-QP-045)</p>

Inspecting Storm Water Runoff Samplers and Retrieving Samples for the MSGP	No. ENV-RCRA-QP-047.1	Page 8 of 14
	Effective Date: May 14, 2013	

	<p>If maintenance is necessary and can be performed at the time of inspection, perform the work and describe in third column.</p> <p>If maintenance cannot be completed at the time of inspection, then describe the condition and work needed in the third column.</p>
17	<p>Item 14: Verify and document the sample tubing passed a suction test by checking the “Yes” or “No” box.</p> <p>Check the condition of sample tubing and vent tubing. If maintenance (e.g., clearing the tube, replacing the tube) is necessary and can be performed at the time of inspection, perform the work and describe in third column.</p> <p>If maintenance cannot be completed at the time of inspection, then describe the condition and work needed in third column.</p>
18	<p>Item 15: Verify all cable and electrical connections are attached and secure by checking the “Yes” or “No” box.</p> <p>If maintenance (e.g., tightening connection, replacing cables) is necessary and can be performed at the time of inspection, describe the work performed in the third column. If more space is needed, continue notes in the “Additional Notes” section.</p> <p>If maintenance cannot be completed at the time of inspection, then describe the condition and work needed in the third column.</p>
19	<p>Item 16: Verify and document sampler is ON prior to departing the site by checking the “Yes” or “No” box. If the sampler is not on, document the reason.</p>
20	<p>Item 17: If the sampler tripped and requires reset of the sampling program, reset the actuator by toggling the switch to “Reset” then back to “Latch”</p> <ul style="list-style-type: none"> <li>• Verify and document the ISCO programming displays the following by checking the “Yes” or “No” box in column 2, page 1.</li> <li>• ISCO 3700 stand-alone samplers = “Sampler Inhibited”</li> </ul> <p>OR</p> <ul style="list-style-type: none"> <li>• Avalanche samplers = “Program Disabled”</li> </ul> <p>If an error occurs, reconfigure the sampler (see <a href="#">ENV-RCRA-QP-045</a> for settings)</p>
21	<p>Item 18: Verify and document any maintenance completed while on site. Describe the work performed or indicate “none completed” in third column.</p> <p>Maintenance items may include (but are not limited to) battery replacement, tubing clearing or replacement, site clearing, securing electrical connections, or sampler diagnostics or repair.</p>
22	<p>Item 19: Verify and document any follow-on maintenance needed that could not be completed while on site. Describe the needed maintenance in the third column. If more space is needed, continue notes in the “Additional Notes” section. A separate work order for the station maintenance will be issued.</p> <p>If no follow-on maintenance is required, indicate “none required” in third column.</p> <p>Maintenance items may include (but are not limited to) battery replacement, tubing clearing or replacement, site clearing, securing electrical connections, or sampler diagnostics or repair.</p>
23	<p>Item 20: If no storm water samples were collected by the sampler, draw a line through page 2 of the work order, initial, and date.</p> <p>If storm water samples were collected by the sampler, skip to “Retrieving storm water runoff</p>

Inspecting Storm Water Runoff Samplers and Retrieving Samples for the MSGP	No. ENV-RCRA-QP-047.1	Page 9 of 14
	Effective Date: May 14, 2013	

	samples” section.
24	Replace and secure the sampler lid and secure the sampler shelter (if sampler is in a shelter).
25	Review the completed work order(s) for accuracy and completeness and sign and date “Review by Signature” line on page 2 of work order.
26	Item 21: Review the work order(s) for accuracy and certify that the information submitted is “true, accurate, and complete” by signing and dating “Lead Signature” line on page 1.
27	Return completed original work orders to the Project Leader the same day following completion of field work. If original work orders must remain with collected samples, return photocopies of incomplete work orders to the Project Leader the same day field work is completed. Stamp or write “Copy” on the work order returned.

## 5.4 RETRIEVING SAMPLES

The following steps should be followed when retrieving samples:

Step	Action
1	Don nitrile gloves and safety glasses.
2	<p>See flow chart in Attachment 1.</p> <p>Item 5: Refer to the “Earliest Sample Collect Date” on work order.</p> <p>If the “Earliest Sample Collect Date” field is empty OR the ISCO sample collection date is ON or AFTER that date, samples may be retrieved per the volume requirements given on the work order. Continue with next step below.</p> <p>If the ISCO sample collection date is BEFORE the “Earliest Sample Collect Date”:</p> <ul style="list-style-type: none"> <li>• Indicate “non-qualifying storm event” in Item 5 third column.</li> <li>• Discard the collected sample water on the ground.</li> <li>• Skip to Step 10 below.</li> </ul>
3	Remove filled and partially-filled bottles from the carousel.
4	<p>Add up the total volume of water collected and check that the collected volume of water in glass and poly matches the required volume in the header of the work order page 2. The volume of water required to complete a sample set may vary. Retrieval of partial volume is allowed as long as the minimum specified volume is met.</p> <p>For <u>“Partial Volume Retrieval Allowed, Minimum Volume NOT Met”</u> samplers:</p> <p>If sample volume was sufficient, continue with next step 5 below.</p> <p>If sample volume was NOT sufficient:</p> <ul style="list-style-type: none"> <li>• Record the date and time the ISCO collected water in each glass and poly bottle by the position number in the carousel in Item 21.</li> <li>• Record total volume retrieved as “0” in Item 22.</li> <li>• Pour out all water on the ground.</li> <li>• Skip to step 11 below.</li> </ul> <p>For <u>“Partial Volume Retrieval Allowed, Minimum Volume Met”</u> samplers:</p> <ul style="list-style-type: none"> <li>• Record the date and time the ISCO collected water in each glass and poly bottle by the position number in the carousel on Item 21 of page 2</li> </ul>

	<ul style="list-style-type: none"> <li>Record the specific ISCO displayed message for each bottle, if present, in the “Comments” column on Item 21.</li> <li>Record total volume retrieved in Item 22.</li> <li>Skip to step 11 below.</li> </ul>
5	For samples retrieved, place lids onto the sample bottles with storm water.
6	Write the date and time collected, Station Number, and the corresponding carousel number on each retrieved sample bottle. Obtain the sample collection date and time from the ISCO sampler.
7	Item 21: Record the date and time the ISCO collected water in each glass and poly bottle by the position number in the carousel. Record the specific ISCO displayed message for each bottle, if present, in the “Comments” column.
8	Item 22: For “ <u>Partial Volume Retrieval Allowed, Minimum Volume NOT Met</u> ” samplers, if sample volume was NOT sufficient, record the total volume retrieved as “0” and discard sample water on ground. For “ <u>Partial Volume Retrieval Allowed</u> ” samplers, record the total volume retrieved.
9	Place retrieved sample bottles in a cooler with blue ice (or equivalent).
10	Return any excess water or collected volume that exceeded the amount required to the ground.
11	Install new sample bottles in the carousel for the next sampling event. The number and type of bottles may vary. Ensure bottles match the configuration specified on page 1 of the work order.
12	Item 23: Document any additional notes or site information in the “Additional Notes” section.
13	Return to steps in “Inspecting the Sampler” above.

## 5.5 DELIVERING SAMPLES

The following steps should be followed when delivering samples:

Step	Action
1	If samples were collected, deliver the samples, and completed, reviewed, and signed work order to the Storm Water Program Laboratory.
2	Item 25: Relinquish samples to MSGP personnel by signing “Relinquished By” or if self processed, refer to ENV-RCRA-QP-048, Processing MSGP Storm Water Samples.
3	Place samples in the refrigerators in the laboratory within the basement of TA-59-1 and lock the refrigerator to prevent tampering.

	Effective Date: September 5, 2013	

## 1.0 PURPOSE

This procedure describes the process for preserving stormwater samples for shipment to an offsite analytical laboratory.

## 2.0 SCOPE

This procedure applies to all LANL personnel and subcontractors who conduct chemical preservation of stormwater samples either in the stormwater Laboratory located in TA-59-1 or out in the field.

### 2.1 HAZARD REVIEW

The work specified in this procedure is conducted in accordance with the following integrated work documents: IWDs 007, 007a, 007b, 007c, 007d, 007e, 007f, 008, 010, 010b, and 010c. Each IWD is associated with a specific FOD depending on location of sample activity. The hazard level of this procedure is **MODERATE**.

## 3.0 RESPONSIBILITIES

The following personnel require training before implementing this procedure:

- ENV-CP staff and contract personnel who process Stormwater samples for the MSGP.

The training method for this procedure is “self-study” (reading). For ENV-CP staff, this is documented in accordance with [ENV-DO-QP-115, \*Personnel Training\*](#). Other participating groups may require training documentation pursuant to local procedures.

Actions specified within this procedure, unless proceeded with “should” or “may,” are to be considered mandatory (i.e., “shall”, “will”, “must”).

### 3.1 PREREQUISITES

In addition to training to this procedure, the following training and data systems access is also required prior to performing this procedure:

- Personnel performing this procedure will be familiar with the most recent version of the ENV-CP MSGP Sampling and Analysis Plan.
- WES-EDA-QP-219, *Sample Control and Field Documentation*
- ENV-RCRA-QP-022, *MSGP Stormwater Corrective Action*

## 4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT

The following records are generated as a result of this procedure and are maintained in accordance with [ENV-DO-QP-110, \*Records Management Program\*](#) with the originals on file at ENV-CP records room:

- Copy of the Sample Collection Log/Field Chain of Custody Form

Processing MSGP Stormwater Samples	No. ENV-CP-QP-048.1	Page 5 of 11
	Effective Date: September 5, 2013	

## 5.0 WORK PROCESSES

The Environmental Protection Agency (EPA) issued the National Pollutant Discharge Elimination System (NPDES) Multi-Sector General Permit (MSGP) on September 29, 2008. The MSGP requires LANL to monitor stormwater runoff from industrial sites relative to potential pollutants.

Stormwater samples are collected in the field either from refrigerated Avalanche™ or ISCO 3700™ automated samplers. Chemical preservation is conducted in the Stormwater Laboratory (in TA-59-01) immediately following sample collection or in the field.

A LANL Project Leader is the primary person responsible for the steps in this procedure.

The following equipment and tools are required:

- Copy of this procedure
- Copy of Integrated Work Documents (IWDs)
- Copy of the ENV-CP MSGP Sampling and Analysis Plan
- Work Orders (if issued)
- Sample Collection Log/Field Chain of Custody Form (provided by the Sample Management Office (SMO))
- Sample containers
- Sample container labels
- Necessary keys
- Safety glasses with side shields
- Nitrile gloves
- Leather gloves or equivalent work gloves
- Glass and poly bottles appropriate for samples to be collected at the site (reference sampling plan)
- Preservative
- Lids for bottles
- Teflon tubing for intake
- Tygon tubing for exhaust

### 5.1 PROCESSING SAMPLES

Step	Action
1	Obtain required Sample Collection Log/Field Chain of Custody Form(s) from the SMO. Collect samples and deliver them to the Water Laboratory in coolers containing Blue Ice®.
2	Double check to make sure the Location ID on the Sample Collection Log/Field Chain of Custody Form matches the sample collection station number. If preservation beyond ice is indicated on the form, obtain required preservative and sample containers for identified volume if different from the amount of sample collected.  <b>NOTE:</b> Specific preservatives and required sample volumes are listed on the Sample Collection Log/Field Chain of Custody Form.
3	Process only one sample set (i.e., samples from one site) at a time.  <b>NOTE:</b> Sample collection bottles are the bottles used to collect the sample in the field. Sample containers are containers/bottles that the original sample is transferred to after processing. These

	containers are transferred to the Sample Management Office for shipment to the analytical laboratory.
4	Affix appropriate label to sample container.
5	Split up samples into appropriate sample containers.
6	Verify that the sample ID number on the container label matches the sample ID number on the Sample Collection Log/Filed Chain of Custody Form

The following steps should be followed when preserving samples:

Step	Action
1	<b>IMPORTANT:</b> Preservation entails the addition of acid or base to a sample. Acids used include hydrochloric acid (HCl), nitric acid (HNO <sub>3</sub> ), and sulfuric acid (H <sub>2</sub> SO <sub>4</sub> ). Bases used in preservation include sodium hydroxide (NaOH). These are all strong acids and bases that can cause severe burns. Extreme care should be taken when using these acids and bases.
2	Preserve (add acid or base) samples according to the requirements on the Sample Collection Log/Field Chain of Custody Form.  <b>NOTE:</b> Make sure the pre-measured preservative labeled size matches the sample container size. If you only have one size pre-measured preservative that does not match the sample container size you may need to use more than one. For example, if you have a 1 liter sample container and 500 ml pre-measured preservative vial, you would need to add two preservative vials to the sample container.
3	Mark each container after preservative has been added to designate that the process has taken place.
4	Securely affix lid to sample container. Clean and dry the exterior of sample container, ensure lid is on securely, and check sample container for leakage and breakage.
5	Apply chain-of-custody tape around the mouth and lid of the bottle.
6	Carefully place sample containers in the cooler and package sample containers with Blue Ice®.

## 5.2 SUBMIT SAMPLES FOR SHIPPING

Submit samples with original Sample Collection Log/Field Chain of Custody Form to SMO for shipping to an offsite analytical laboratory. The person delivering the sample to SMO relinquishes the sample by signing, dating and recording the time under “Relinquished By.” The SMO accepts samples by signing, dating and recording the time under “Received By.” Obtain a signed copy of the Sample Collection Log/Field Chain of Custody Form from the SMO. Make a copy of the Sample Collection Log/Field Chain of Custody Form and provide it to the MSGP Project Leader.

Every attempt will be made to minimize the amount of waste generated. Field personnel will diligently collect only the volumes identified as the minimum or maximum allowable identified on Form. If there is not enough liquid collected to meet these volumes, the Stormwater will be

Processing MSGP Stormwater Samples	No. ENV-CP-QP-048.1	Page 7 of 11
	Effective Date: September 5, 2013	

discharged at the sampler location. Extra Stormwater collected will also be discharged at the sampler location. If waste is generated, contact the Waste Management Coordinator for TA-59-1 or the MSGP Project Leader.

### **5.3 DATA QUALITY OBJECTIVES**

The 2008 MSGP permit requires quarterly and annual Stormwater monitoring to determine if pollutants from industrial activities are migrating into U.S. waters. The permit specifies benchmark parameters that are indicators of potential pollutant sources. In addition, certain impaired water quality standards must be met. Factors which must be considered in making the decision of whether pollutant sources are present or water quality standards have been exceeded are analytical data quality and whether the collected sample is representative of the permitted discharge.

To determine whether the Laboratory is in compliance with all relevant laws and regulations, sample collection and analytical data must be evaluated by the a representatives of ADESH, Operations and Integration Office (OIO) by requesting formal focused validation and/or by the MSGP Project Leader.

Sample collection and submission is conducted under the guidelines found in:

- NPDES Permit Tracking No. NMR05GB21
- 40 CFR Subpart 136 Guidelines establishing the test procedure for the analysis of pollutants.

Sample analysis must use EPA approved methods as set forth in the NPDES permit.

Benchmark levels are identified in the 2008 MSGP. Outfall and sampling locations are identified in the individual facility Stormwater Pollution Prevention Plans (SWPPP).

Monitoring frequencies and reporting requirements are specified in the 2008 MSGP.

#### Sampling location(s):

Annual, quarterly, and visual assessments shall be conducted in compliance with the monitoring requirements specified in the 2008 MSGP. As specified previously, specific sampling location(s) are identified in the facility specific SWPPP.

#### Grab Sample:

A minimum of one grab sample from a discharge resulting from a measurable storm event is required. Samples must be collected within the first 30 minutes of a measurable storm event. If that is not possible, the sample must be collected as soon as practicable after the first 30 minutes and documentation must be kept with the SWPPP explaining why it was not possible to take samples within the required time frame. In the case of snowmelt, samples must be taken during a period with a measurable discharge.

Processing MSGP Stormwater Samples	No. ENV-CP-QP-048.1	Page 8 of 11
	Effective Date: September 5, 2013	

**NOTE:** A grab sample is defined as a single sample collected at a NPDES outfall (using approved EPA methods) at a particular time that represents the composition of the stormwater at that time and place.

Representative Sampling:

Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

MSGP Discharge Monitoring Reports and Other Reports (MDMRS):

Monitoring results must be reported on an MDMR form (EPA Form No. 2040-0004) in accordance with the “Instructions for Completing the MSGP Industrial Discharge Monitoring Report” provided on the form. The permittee shall submit the original MDMR signed and certified to EPA as required by Part 7.1 of the MSGP.

Duty to Comply:

The permittee must comply with all conditions of the 2008 MSGP permit. Any permit noncompliance constitutes a violation of the Act and is grounds for enforcement action.

## 5.4 DEVELOP A DECISION RULE

If analytical results from monitoring activities are above benchmark and/or natural background levels, a corrective action is entered into the ENV-CP Corrective Action Report Database, in accordance with [ENV-RCRA-QP-022, \*MSGP Stormwater Corrective Actions\*](#). An e-mail is automatically generated and sent to personnel responsible for evaluating and modifying controls to prevent further exceedances. Data validation is conducted under the guidelines of the DOE Statement of Work.

Acceptable analytical error is addressed in the DOE Statement of Work.

The current MSGP monitoring program is based on the 2008 MSGP. Activities that could affect the current or next MSGP permit include:

- Addition or removal of constituents into the 303(b) list,
- Discontinued monitoring based on no detection or constituent levels below benchmark or natural background,
- Specific changes identified by EPA within the next permit,
- DOE Statement of Work requirement for analytical laboratories.

## MSGP STORM WATER VISUAL INSPECTIONS

<b>Purpose</b>	This procedure is written to provide requirements for conducting visual monitoring under the 2008 National Pollutant Discharge Elimination System (NPDES) Storm Water Multi-Sector General Permit (MSGP) for industrial facilities.
<b>Scope</b>	Requirements set forth in this document apply to Los Alamos National Laboratory industrial facilities covered by the MSGP. These facilities include, a warehouse, several metal fabrication areas/shops, a heavy equipment yard, an asphalt batch plant, roads and grounds, a foundry, a power plant, a material recycling facility and several hazardous waste treatment, storage or disposal (TSD) facilities. Inspection waivers may be granted by ENV-RCRA for adverse weather conditions and unstaffed or inactive sites.
<b>Hazard review</b>	The work described in this procedure is <u>field work</u> and consists solely of visual evaluations, and has been documented to have a <b><u>LOW hazard</u></b> rating by submittal of a completed <a href="#">ENV Low Hazard Verification form</a> to the Quality Assurance Specialist.

### Signatures

Prepared by:  Signature on File _____ Holly Wheeler, ENV-RCRA	Date:  02/22/12
Approved by:  Signature on File _____ Melanie Lamb, ENV Quality Assurance Specialist	Date:  02/14/12
Authorized by:  Signature on File _____ Terrill Lemke, ENV-RCRA Team Leader	Date:  02/27/12
Authorized by:  Signature on File _____ Anthony Grieggs, ENV-RCRA Group Leader	Date**:  03/06/12
Classification Review by  Signature on File _____ Anthony Grieggs, Derivative Classifier	Date: 03/06/12 <input checked="" type="checkbox"/> Unclassified

\*\* Effective Date

### CONTROLLED DOCUMENT

This copy is uncontrolled. The controlled copy can be found on the ENV Division Web page.  
Users are responsible for ensuring they work to the latest approved revision.

## General information about this procedure

### In this procedure

This procedure addresses the following major topics:

Topic	Page
General information about this procedure	2
Who requires training to this procedure?	2
Roles and responsibilities	5
Visual examinations	5
Completing the MSGP storm water visual inspection form	6
Guidance	8
Records resulting from this procedure	9

### Attachments

This procedure has the following attachments:

Number	Attachment Title	No. of pages
1	MSGP Visual Inspection Form	1
2	Example MSGP Visual Inspection Form	1
3	Facilities and Storm Water Stations Associated With Industrial Activity	1

### History of revision & review

This table lists the revision history, reviews, and effective dates of this procedure:

Revision	Date	Description of Changes or Review
0	7/09	New document.
1	3/10	Clarifications and added attachments.
2	2/12	Biennial review/revision.

### Who requires training to this procedure?

The following personnel require training before implementing this procedure:

- Group and Project Leader
- MSGP Visual Assessors
- ENV-Deployed Environmental Professional (DEP)
- ENV-RCRA Sampling Team

### Training method

Training to this procedure will be by “**self-study**” (**reading**) and will be documented in accordance with [ENV-DO-QP-115 Personnel Training](#).

## General information about this procedure, continued

---

**Prerequisites** In addition to training to this procedure, the following training is also required prior to performing this procedure:

- [ENV-RCRA-QAPP-MSGP Multi-Sector General Permit Quality Assurance Project Plan](#)

---

**Definitions specific to this procedure** Adverse weather conditions: Weather that prohibits collection of samples such as local flooding, high winds, hurricanes, tornadoes, electrical storms, etc. Could also include drought, extended frozen conditions, etc.

Best Management Practices (BMPs): Schedules of activities, practices, prohibitions of practices, structures, vegetation, maintenance procedures, and other management practices to prevent or reduce pollution. BMPs can also include treatment requirements, operating procedures, and practices to control facility site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Clarity: Clearness or cleanness of appearance. This includes the visual observation of suspended sediment.

Color: Unpolluted water will be clear and colorless. Color should not be confused with clarity.

Floating solids: Particulate material floating on the surface of the water. Examples include: leaves, pinecones, pine needles, dead grass, twigs, branches, and common trash.

Foam: An accumulation of fine frothy bubbles formed in or on the surface of water. A mass of bubbles of air in a matrix of liquid film.

Odor: The property or quality of waters that affects or stimulates the sense of smell. Examples of odors that may be present are burnt oil, sewage, diesel, sulfuric, or detergent odors.

Oil sheen: The presence of rainbow-like colors glistening on the surface of a liquid. The color of oil sheen will vary dependent on thickness and consistency.

Settled solids: Settled particulate material i.e. heavier than water. Examples include sand, gravel, metal turnings, and glass.

Suspended solids: Particulate materials that are floating between the bottom of the sample and the surface of the water.

Unstaffed and Inactive Sites: A facility maintaining certification with the SWPPP that it is inactive and unstaffed and visual examinations are not required.

---

## General information about this procedure, continued

In addition to these documents, please read any site specific requirements before proceeding with work.

### Note

Actions specified within this procedure, unless preceded with “should,” or “may,” are to be considered mandatory (i.e., “shall,” “must,” “will”).

## Roles and Responsibilities

---

**Deployed  
Environ-  
mental  
Professionals**

Deployed environmental professionals (DEPs) are responsible for collecting quarterly visual samples at substantially identical outfalls and completing required documentation, unless arrangements are made to use ENV-RCRA resources. DEPs will be fully knowledgeable of the site specific SWPPP. Whenever practicable the same person should carry out the inspection and examination of the discharges throughout the life of the permit to ensure consistency in interpretation of results. Further, DEPs shall be familiar with facility operations so that potential pollution discharge sources can be determined.

---

**ENV-RCRA  
MSGP storm  
water  
compliance  
personnel**

MSGP storm water compliance personnel are responsible for filling out a visual assessment form if requested by work order for MSGP monitored outfalls. Storm water compliance personnel are also responsible for evaluating the quality of completed visual assessments, retaining a record of QA'd forms on the server and distributing these forms to the DEPs for inclusion into the appropriate facility SWPPP.

---

## Visual Examinations

---

**Visual  
examinations**

Visual examinations of storm water discharge shall be conducted quarterly for each discharge point covered by the MSGP and the site specific SWPPP.

---

**Grab samples**

A grab sample will be collected during daylight hours in a 1 liter wide mouth clear glass bottle or plastic container within 30 minutes of discharge from a storm event. If it is not possible to collect the sample within the first 30 minutes of discharge, the sample must be collected as soon as practicable after the first 30 minutes. The sampler will document the reason a sample could not be collected within 30 minutes.

If no samples are collected because the sampler was not triggered (or for some other reason), documentation shall be kept in the facility's SWPPP explaining why visual examinations were not conducted.

---

---

## Completing the MSGP Storm Water Visual Inspection Form

---

**Location, date & time, inspector, etc.** Complete the top section of form including location as indicated on site map, date and time, outfall ID (i.e. the monitored outfall), person collecting and examining the sample and signature, and inspection quarter.

**NOTE:** See Attachment 2 for an example of a filled-out MSGP Visual Inspection form.

**NOTE:** See Attachment 3 for facility name, location, and station numbers.

Include the date and time the discharge began, sample collection date and time and visual assessment date and time for each sample. Identify the nature of the discharge (i.e., rainfall or snowmelt). Determine whether it has been greater than 72 hours from the last storm event. If “No”, explain when the last storm event occurred.

**Sample document-  
ation**

---

Provide documentation if sample is not collected within 30 minutes of discharge.

---

## Completing the MSGP Storm Water Visual Inspection Form, continued

### Describe sample parameters

Refer to section 3.0, Definitions. See attachment 2 for an example of a filled-out MSGP Visual Inspection form.

Parameter	Description
<b>Color</b>	Describe the color of the discharge.
<b>Odor</b>	Describe any odors that may be observed in the discharge. Caution: any unusual odors should be documented.
<b>Clarity</b>	Clarity can be described as the depth in which you can look into or through water. For example an individual can see through a clear glass of clean water in daylight. Generally the clarity of the water is a good visual indicator of the purity of water. If the water is poor in clarity there is most likely suspended solids throughout the water.
<b>Floating Solids</b>	Note any floating solids in the sample. Careful examination should determine whether the solids are raw or waste materials (i.e. vegetative materials).
<b>Settled Solids</b>	Note any settled solids in the sample. Settled solids may be an indicator of unstable ground cover combined with a high intensity storm water runoff event.
<b>Suspended Solids</b>	Note any suspended solids in the sample. Most often suspended solids include fine sediment. This may be an indication of an unstable channel that may have eroding banks. Some water appears to be colored because of relatively coarse particulate material in suspension such as sediment.
<b>Foam</b>	Note an accumulation of fine frothy bubbles formed in or on the surface of water. Describe the color of the foam.
<b>Oil Sheen</b>	Note if there is an oil sheen present, the thickness, and consistency. If yes, contact the ENV-RCRA Project Leader for MSGP <b><u>immediately</u></b> . Follow-up action is required within 24 hours.
<b>Other</b>	Describe any other indicators of storm water pollution in addition to the descriptions mentioned above.

## Completing the MSGP Storm Water Visual Inspection Form, continued

**ENV  
Deployed  
Environmental  
Professional** Place completed and signed form into the facility SWPPP. Provide a copy to the MSGP Project Leader or other designee at ENV-RCRA.

**Site  
observations** Note if there are any potential sources of pollutants on site. If yes, contact an MSGP representative of ENV-RCRA and document the following:

- potential sources;
- indicate if there are any BMPs on site and evaluate and note effectiveness;
- if no BMPs, determine if installation could correct future pollutant migration; and
- the nature of discharge (i.e., runoff or snow melt).

**Source of  
pollutants** While conducting the visual examinations, personnel should constantly be attempting to relate any pollutant that is observed in the samples to the sources of pollutants that are on the site.

## Guidance

**Clean up** A clean up of the site should be conducted if the pollutant source is known and well defined. The FOD, ESH Manager, and MSGP representative of ENV-RCRA should also be contacted and made aware of the situation. A design change could also be incorporated into the storm water pollution prevention plan to eliminate or minimize the contaminant source from occurring in the future. Personnel should evaluate whether or not additional BMPs should be implemented in the pollution prevention plan to address the observed contaminant, and if BMPs have already been implemented, evaluate whether or not these are working correctly or need maintenance. Corrective actions must be taken if BMPs are not performing effectively. Actions should be taken as soon as practicable from the discovery of any pollutants.

**NOTE:** This time frame (and those listed below) is not a grace period. Rather, it is a schedule considered reasonable for documenting your findings and for making repairs and improvements. The time frame is to ensure that the conditions prompting the need for these repairs and improvements are not allowed to persist indefinitely. Failure to take prompt action can result in fines and penalties for non-compliance.

---

## Guidance, continued

---

### Corrective action

If storm water contamination is identified through visual assessment, a corrective action must be entered into the ENV-RCRA MSGP Corrective Action Report database within 24 hours of the observation. A corrective action plan must be identified within 14 days of the observation.

**NOTE:** If possible, the corrective action must be implemented before the next anticipated storm event.

---

### Follow up

A date for completion of implementation must be entered into the database to ensure that appropriate actions are taken in response to the examinations.

---

## Records resulting from this procedure

---

### Records

The following records generated as a result of this procedure are to be submitted to an MSGP representative of ENV-RCRA in accordance with [ENV-DO-QP-110 Records Management](#).

- MSGP Quarterly Visual Assessment Form
- 

[\*Click here to record “self-study” training to this procedure.\*](#)

### MSGP Quarterly Visual Assessment Form

*Complete a separate form for each outfall you assess. When adverse weather conditions prevent the collection of a sample during the quarter, a substitute sample must be taken during the next qualifying storm event. Maintain this document in your SWPPP).*

Name/Location of Facility:		Permit Number: NMR05GB21	Inspection Quarter: <input type="checkbox"/> Apr-May <input type="checkbox"/> Jun-Jul <input type="checkbox"/> Aug-Sep <input type="checkbox"/> Oct-Nov
Outfall ID:	"Substantially Identical Outfall"? <input type="checkbox"/> Yes <input type="checkbox"/> No		If YES identify other Outfalls in the Group:
Person(s) collecting sample (PRINT): PPT Member? <input type="checkbox"/> Yes <input type="checkbox"/> No		Signature :	
Person(s) examining sample (PRINT): PPT Member? <input type="checkbox"/> Yes <input type="checkbox"/> No		Signature :	
Date & Time Discharge Began:	Date & Time Sample Collected:	Date & Time Sample Examined:	
Substitute Sample? <input type="checkbox"/> Yes <input type="checkbox"/> No		If YES, identify quarter/year when sample was originally scheduled to be collected:	
Was the sample collected in the first 30 minutes? <input type="checkbox"/> Yes <input type="checkbox"/> No If No, explain why not:			
Nature of Discharge: <input type="checkbox"/> Rainfall. Amount _____ inches <input type="checkbox"/> Snowmelt. Amount _____ inches			
Previous Storm Ended > 72 hours Before Start of This Storm? <input type="checkbox"/> Yes <input type="checkbox"/> No		If No, Explain: *	

#### PARAMETERS

Color	<input type="checkbox"/> None <input type="checkbox"/> Other	If Other describe:
Odor <input type="checkbox"/> None <input type="checkbox"/> Musty <input type="checkbox"/> Sewage <input type="checkbox"/> Sulfur <input type="checkbox"/> Sour <input type="checkbox"/> Solvents <input type="checkbox"/> Petroleum/Gas <input type="checkbox"/> Other	If Other, describe the odor:	
Clarity: <input type="checkbox"/> Clear <input type="checkbox"/> Slightly Cloudy <input type="checkbox"/> Cloudy <input type="checkbox"/> Opaque <input type="checkbox"/> Other (describe):		
Floating Solids: <input type="checkbox"/> Yes <input type="checkbox"/> No	If YES, describe if raw or waste materials(s):	
Settled Solids:** <input type="checkbox"/> Yes <input type="checkbox"/> No	If YES, are solids Fine <input type="checkbox"/> Coarse <input type="checkbox"/> If Other describe:	
Suspended Solids: <input type="checkbox"/> Yes <input type="checkbox"/> No	If YES, are solids Fine <input type="checkbox"/> Coarse <input type="checkbox"/> If Other describe:	
Foam (gently shake sample): <input type="checkbox"/> Yes <input type="checkbox"/> No	If YES, on the surface <input type="checkbox"/> or <input type="checkbox"/> in the water. Describe color:	
Oil Sheen <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Color of Sheen:	Thickness: Flecks <input type="checkbox"/> Globs <input type="checkbox"/> Describe if other:	
Other Obvious Indicators of Pollution Present in the sample? Yes <input type="checkbox"/> No <input type="checkbox"/>	If YES describe:	

#### SITE OBSERVATIONS

Potential pollutants found during visual examination? ☐ Yes ☐ No If Yes, list pollutant(s) and if possible indicate the source: If source is identified during collection of sample, please notify Tim Zimmerly @ 699-7621 or 664-0105

Pollutant	Source	Pollutant	Source

**NOTE:** A clean up of the site should be conducted if the pollutant source is known. Was proper Notification made? ☐ Yes ☐ No  
If Yes, indicate who was notified:

#### CORRECTIVE ACTION

If storm water contamination was identified in this sample through visual assessment, was a Corrective Action Form filled out within 24 hrs of observation? Yes ☐ No ☐ If No, explain why not:

Was a Corrective Action Plan identified within 14 days of the observation? Yes ☐ No ☐ If No, explain why not:

Other Relevant Information: Yes ☐ No ☐

Use the back of this form to list any concerns, comments, and/or descriptions of pictures taken, (attach additional sheets as necessary).

\* The 72-hour interval can be waived when the previous storm did not yield a measurable discharge or if you are able to document (attach applicable documentation) that less than a 72-hour interval is representative of local storm events during the sampling period.

\*\* Observe for settled solids after allowing the sample to sit for approximately one-half hour.

## Example of Filled-Out MSGP Quarterly Visual Assessment Form

MSGP Quarterly Visual Assessment Form			
Complete a separate form for each outfall you assess. When adverse weather conditions prevent the collection of a sample during the quarter, a substitute sample must be taken during the next qualifying storm event. Maintain this document in your SWPPP).

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 4 of 24
	Effective Date: June 12, 2012	

## 1.0 PURPOSE

This Environmental Protection Division (ENV-DO) procedure describes how to determine whether an unplanned release, spill, fire, or other event needs to be reported under environmental regulations and how to fulfill all immediate reporting requirements (within the first 24 hours). Emergency and abnormal event notification requirements for reporting to Laboratory and DOE management are specified in [PD1200, Emergency Management](#), and [P322-3, Performance Improvement from Abnormal Events](#). Environmental reporting requirements regarding releases or other events are included in this procedure.

## 2.0 SCOPE

This procedure applies to ENV-DO on-call representatives and subject matter experts (SMEs) who must respond to any release, spill, or event at the Laboratory that may require immediate notification to local, state or federal regulatory agencies or Pueblo Environmental Departments (refer to [ENV-DO-QP-111, Reporting Environmental Releases To Pueblo Governments](#)) and describes the actions that must be performed within the first 24 hours. This procedure does **not** cover the response procedures for “continuous releases” under CERCLA and EPCRA (see definitions) nor the follow-up notifications and reports.

### 2.1 WORK HAZARD ANALYSIS

The work described in this procedure consists of field work that does not require an Integrated Work Document (IWD) and is rated as having a **LOW hazard** level as documented by submittal of an [ENV Low Hazard Verification form](#) to the Quality Assurance Specialist.

## 3.0 RESPONSIBILITIES/PREREQUISITES

The following personnel require training before implementing this procedure:

- ENV-DO managers and designated on-call representatives and SMEs who may be asked to fulfill reporting requirements during release-related exercises or during actual releases, or within 24 hours.

Annual retraining to this procedure is required. This procedure will be reviewed biennially by all affected personnel and updated as necessary.

Training to this procedure will be by “self-study” (reading) and is documented in accordance with the trainee’s organization’s procedure for training.

### 3.1 PREREQUISITES

- None

**Note:** Actions specified within this procedure, unless preceded with “should,” or “may,” are to be considered mandatory (i.e., “shall,” “must,” “will”).

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 5 of 24
	Effective Date: June 12, 2012	

#### **4.0 DOCUMENT CONTROL/RECORDS MANAGEMENT**

The following records generated as a result of this procedure are to be submitted as records according to the responder's group's internal records management process:

- Field documentation of the release, including:
  - Time and date of the release
  - Time, date, and description of notifications
  - Location and source of the release
  - Type of material released
  - Quantity of material released
  - Impacted media
  - Time release was stopped
  - Any immediate mitigation actions taken to contain or control the release
  - Documentation of any verbal notifications
  - Samples taken
- Copies of any written notifications generated
- Documentation of any analytical results, and quality assurance of results
- Any other contingency plan or emergency plan documentation
- Documentation of any PCB notification
- Documentation of any RCRA permit non-compliance that threatens human health and environment
- Documentation of treatment of any RCRA unstable chemicals, leaking or compromised gas cylinders

#### **5.0 WORK PROCESSES**

Events covered by this procedure include detonation or burns of unstable material, leaking or compromised gas cylinders, puncturing of bulging containers, fires, explosions, chemical or radiological spills inside or outside of buildings, wastewater spills, potable water or fire fighting water as well as impacts to cultural and biological resources not adequately documented, and other releases to the environment.

On a semi-annual basis ENV-DO will prepare a list of individuals designated as on-call representatives and will designate the week each will be on-call. This list will be distributed to on-call representatives and Laboratory managers including PADOPS, ADES&H, ADEP, Emergency Operations (ADSS-EO), ENV-DO, ENV-RCRA, and ENV-ES. The on-call representative can be reached by pager at 664-7722.

##### **5.1 RESPONSIBILITY OF ON-CALL REPRESENTATIVE**

The ENV on-call representative is the party primarily responsible for:

- determining if the incident will require immediate notification to external agencies in accordance with LANL, State, and Federal regulatory reporting requirements
- notifying ENV Division management of immediate reporting requirements; and

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 6 of 24
	Effective Date: June 12, 2012	

- if needed, coordinating with other on-call SMEs and the Emergency Operations Center (EOC) to ensure the required notifications for environmental reporting and abnormal events are being addressed for the Laboratory.

The ENV-DO on-call representative is not responsible for the following, EOC will make these determinations:

- determining if the RCRA Contingency Plan must be implemented, or
- if a shock-sensitive material or leaking or compromised gas cylinder constitutes an emergency.

However, in order to ensure that the appropriate expertise is available for the affected media, the ENV on-call representative may immediately confer with an SME of the ENV group that has programmatic responsibility. If an SME from the responsible group is able to respond to the event, the remaining steps in this procedure may be passed to that person.

A list of contact numbers for on-call representatives and SMEs for ENV groups (ES & RCRA) is available in the ENV-RCRA group office. The ENV-DO and ADSS-EO may also be contacted to determine the on-call representative for each group.

## 5.2 FOLLOW-UP REPORTING

This procedure describes the initial external notifications (within the first 24 hours) to regulatory agencies and Pueblo Environmental Departments. After completion of the steps in this procedure, the ENV group specifically responsible for compliance with the relevant regulations (responsible group) will complete the required notifications and reports, as applicable under the appropriate regulations, according to established procedures.

## 5.3 SUMMARY OF POLICY ON REPORTING

The ENV on-call representative and SMEs have the authority and responsibility for deciding when to report and for making the report to regulatory agencies within regulatory deadlines and to Pueblo Environmental Departments when potentially impacted.

LANL management and DOE LASO must be informed as soon as possible that a report was or will be made, but their approval is not required prior to the report being made to the regulatory agency or Pueblo. LANL management, with input from ENV SMEs, will determine if an ORPS (Occurrence Reporting Processing System) report or other type of Lessons Learned will be necessary.

**NOTE:** ADSS-EO maintains a current list of on-call LANL managers.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 7 of 24
	Effective Date: June 12, 2012	

## 5.4 USING THIS PROCEDURE

This procedure has four separate paths (and corresponding sections) to follow for determining if a release or event is reportable. Follow each of these paths to determine if one or more are applicable:

- RCRA
- TSCA
- CWA, NM WQA, and NM WQCC Regulations
- CERCLA and EPCRA.
- CAA
- Endangered Species Act (ESA), New Mexico Endangered Plant Species Act
- Bald Eagle Protection Act, Migratory Bird Treaty Act
- New Mexico Wildlife Conservation Act
- National Environmental Policy Act (NEPA)
- National Historic Preservation Act (NHPA)
- Native American Graves Protection and Repatriation Act (NAGPRA)
- Archaeological Resources Protection Act (ARPA)

Under CERCLA or EPCRA, a Reportable Quantity (RQ) is the action level that may trigger an appropriate response to a release under the provisions of these regulations. A release may not meet RQ reporting limits **but still may be reportable** under RCRA and CWA requirements.

**NOTE:** The 24-hour deadline (15 minutes in some cases) applies regardless of whether it occurs during business hours, non-business days or after business hours.

Additional information and guidance on how and when to report a release is available at this link: <http://homer.ornl.gov/nuclearsafety/env/guidance/cercla/rqs-gen.pdf>.

All potential ENV-DO on-call representatives or SMEs should follow the various links at this site and be familiar with the guidance before any release or event occurs.

## 5.5 DETERMINING IF A RELEASE IS REPORTABLE UNDER RCRA

Follow the flow charts in Attachment 1 to determine if an event is reportable under RCRA. The three groups of circumstances described below (also delineated in the flow charts in Attachment 1) are evaluated to determine if an event is reportable.

Under the RCRA permit requirements, the ADSS-EO manager determines if the “RCRA Contingency Plan” provisions should be implemented. The flow chart in Attachment 1 starts with this determination. The ENV on-call representative or an ENV-RCRA SME performs notifications that are necessary.

The ADSS-EO Manager will normally attempt to contact the ENV-RCRA SME for guidance in making this decision. If the ENV-RCRA SME is successfully contacted, the completion of the remainder of this procedure may be passed on to this individual.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 8 of 24
	Effective Date: June 12, 2012	

The ENV on-call representative makes the determination that one or more of these conditions occurred through consultation with ENV-RCRA and appropriate SMEs. 24-hour notification can be made by the on-call representative or by an SME of ENV-DO.

The EOC manager makes the determination that unstable chemicals, leaking or compromised gas cylinders represent an emergency situation and, typically with ENV-RCRA, how best to respond. 24-hour notification can be made by the on-call representative or ENV-RCRA SME.

If a release/event is reportable under RCRA rules, determine if the release/event is reportable under other rules and proceed to the section *Reporting a Release or Event*.

## 5.6 DETERMINING IF A RELEASE IS REPORTABLE UNDER TSCA

In practice, only spills of Polychlorinated Biphenyls (PCBs) or PCB-suspect untested mineral oil to the environment (generally outdoors or with the potential to reach the outdoors) are reportable. Spills that are contained indoors are generally not reported.

A release of PCB's is reportable to the EPA under TSCA if it is over 10 pounds PCB's by weight or at concentrations of 50 ppm or greater.

Follow the steps in *Determining if a Release is Reportable under CERCLA, EPCRA, or Other Regulations* to determine if the RQ (of 1 pound) for PCBs has been triggered. Additionally, reporting requirements are triggered if over 270 gallons of untested mineral oil suspected of containing PCBs has been spilled.

There are nine items containing PCBs that are in use at the CMR Building. In addition, there is one PCB contaminated transformer in use at TA-48. All other known PCB equipment at the Laboratory has been taken out of service and disposed of in accordance with TSCA regulations.

If a release (see definitions) is reportable under TSCA, continue through the next sections to determine if the release/event is reportable under other rules and proceed to *Reporting a Release or Event* and determine if additional reporting is necessary (below).

If the spill is ...	Then...
over 10 pounds by weight of PCBs (TSCA)  <b>OR</b>  if PCBs are at concentrations ~50 ppm that directly contaminate surface water sewers, drinking water supplies, grazing lands, or vegetable gardens	Report to EPA Region 6 (Office of Prevention, Pesticides and Toxic Substances Branch) through EPA's 24-hour spill response number 866-372-7745 as soon as possible after discovery but no later than 24 hours after discovery.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 9 of 24
	Effective Date: June 12, 2012	

## 5.7 DETERMINING IF A RELEASE IS REPORTABLE UNDER CWA OR NM WATER QUALITY ACT

The CWA and NM Water Quality Act (NMWQA) (equivalent to the national Clean Water Act) does not use RQs (as described in the next section). Instead the NM Water Quality Control Commission (NMWQCC) regulations state: *“Any amount of any material in such quantity as may with reasonable probability injure or be detrimental to human health, animal or plant life, or property, or may unreasonably interfere with the public welfare or the use of property. This includes chemical, biohazardous, petroleum-product, and sewage spills and incidents. In addition to recent spills, the discovery of evidence of previous unauthorized discharges, such as contaminated soil or ground water, also must be reported.”*

The above rule requires the use of professional judgment to determine if reporting is required. No quantifiable metric is available to assist in making this determination, however. The ENV on-call representative or SME has the authority and responsibility to make this determination.

Spills of potable water or fire fighting water (e.g., water line breaks) require reporting if there is a release of over 5000 gallons or if the release impacts a Solid Waste Management Unit (SWMU). Contact the ADEP for the location of SWMUs and coordinate any necessary water quality notifications with ENV-RCRA.

For oil discharges (film/sheen/discoloration) to water in stream channels, additionally notify the National Response Center (24-hour verbal notification) and EPA Region 6.

### 5.7.1 ADDITIONAL REPORTING REQUIREMENT FOR PETROLEUM STORAGE TANKS

New Mexico Environment Department (NMED) regulations from June 2009 require verbal reporting within 24 hours of release of petroleum products from regulated tanks to the Petroleum Storage Tank (PST) Bureau when there is:

- evidence of release of regulated substances;
- unusual operational conditions (that would cause concern about a release); or
- monitoring results that show loss from the system.

Regulated tanks include those of 1320 gallons to 55,000 gallons and exclude all sizes of tanks used to fuel emergency generators.

This reporting requirement is in addition to the reporting under NMWQCC Regulations and CWA requirements for such releases. Call the PST Bureau at 476-4397 during business hours and 827-9329 after closing.

If there is more than one activity team member, the PIC conducts a readiness check during the tailgate briefing to note any local work conditions that could affect the work and reminds the team of the documented hazards and controls. At this time workers also verify that each other's PPE is adequate.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 10 of 24
	Effective Date: June 12, 2012	

If a release (see Definitions) is reportable under NMWQCC Regulations, continue through the next sections to determine if the release/event is reportable under other rules and proceed to the Section, *Reporting a Release or Event*.

#### 5.7.2 ADDITIONAL REPORTING REQUIREMENTS UNDER NPDES PESTICIDE GENERAL PERMIT

Adverse incidents, an unusual or unexpected incident that an Operator has observed upon inspection or of which the Operator otherwise becomes aware, requires reporting under the NPDES Pesticide General Permit (PGP).

The Operator should report any adverse incidents in which:

- (1) There is evidence that a person or non-target organism has likely been exposed to a pesticide residue, and
- (2) The person or non-target organism suffered a toxic or adverse effect. The phrase toxic or adverse effect includes effects that occur within Waters of the United States on non-target plants, fish, or wildlife that are unusual or unexpected (e.g. effects are to organisms not otherwise described on the pesticide product label or otherwise not expected to be present) as a result of exposure to a pesticide residue, and may include:
  - Distressed or dead juvenile and small fishes;
  - Washed up or floating fish;
  - Fish swimming abnormally or erratically;
  - Fish lying lethargically at water surface or in shallow water;
  - Fish that are listless or nonresponsive to disturbance;
  - Stunting, wilting, or desiccation of non-target submerged or emergent aquatic plants; and/or
  - Other dead or visibly distressed non-target aquatic organisms (amphibians, turtles, invertebrates, etc.)

The phrase toxic or adverse effects also includes any adverse effects to humans (e.g. skin rashes) or domesticated animals that occur either from direct contact with or as a secondary effect from a discharge (e.g. sickness from consumption of plants or animals containing pesticides) to Waters of the United States that are temporally and spatially related to exposure to a pesticide residue.

If an Operator observes or otherwise becomes aware of an adverse incident due to pesticide application, the Operator must immediately notify the appropriate EPA Incident Reporting contact within 24 hours of the incident of the Operator becoming aware of the adverse incident. EPA Incident Reporting Contacts are listed at [www.epa.gov/npdes/pesticides](http://www.epa.gov/npdes/pesticides). These reporting requirements are in addition to any required under Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA).

## 5.8 DETERMINING IF A RELEASE IS REPORTABLE UNDER CERCLA OR EPCRA

Under CERCLA or EPCRA, a Reportable Quantity is the action level that may trigger an appropriate response to a release under the provisions of these regulations. RQs are summarized in 40 CFR Part 302. An RQ is based on the quantity of chemical released within any 24-hour period. The RQs for extremely hazardous substances can be found in 40 CFR Part 355, Appendices A and B, in the column labeled “RQ”. This table has two columns of RQs: the Statutory RQ and the Final RQ. Use the weight in the Final RQ column for determining if the release must be reported. The chemicals that have not been assigned RQs by EPA have been given statutory RQs of one pound by Congress.

Releases (see definitions) that occur within a closed space with no emissions to the ambient environment (see definitions) are exempt from this requirement.

The exceedance of an RQ requires immediate notification.

**NOTE:** Response procedures for “Continuous Releases” are not covered in this procedure.

### 5.8.1 REGULATORY CLASSIFICATION OF THE RELEASED MATERIAL

Determine the regulatory classification of the substance released with respect to the hazard classifications: Extremely Hazardous Substance (EHS) and/or Hazardous Substance (HS) (see definitions).

Often during the course of an emergency, complete information will not be available regarding type and amount of material released. In this case, best professional judgment must be used to establish the level of confidence associated with the estimates. If the uncertainty is high enough that future estimates may require reporting, it is best to err on the side of caution and follow the reporting requirements in the section *Reporting a Release or Event*.

- Identify the constituents in the material released using the Material Safety Data Sheet (MSDS), laboratory analysis, data sheet, manifest, or manufacturer information.
- A summary of the RQs can be found in 40 CFR Part 302 and 40 CFR Part 355, Appendices A and B. The RQ may also be determined using the on-line RQ Calculator (<http://homer.ornl.gov/rq/>)
- Calculate the amount of the listed chemical involved in the release (the weight of the material released multiplied by the percentage of the concentration of the listed chemical present in the material).

After determining the RQ of a released material, the ENV-DO on-call representative or SME will perform the following steps to determine if an RQ has been released.

Step	Action						
1	Obtain an estimate of the quantity and type of material released (e.g. 4 pounds of chlorine gas or 150 curies of tritium).						
2	Compare this quantity against the RQs provided in Appendix B to 40 CFR 302 and 40 CFR 355, Appendices A and B.						
3	<p>If this is an airborne release of radioactive materials, it is reportable if the RQ is exceeded AND if the release could cause an annual exposure to the nearest downwind residence or business of 10 mrem (40 CFR 61, Subpart H).<sup>1</sup> The exposure estimate should be made by an environmental health physicist.</p> <table> <tr> <td><b>If the release...</b></td><td><b>Then...</b></td></tr> <tr> <td>Is over the RQ AND could cause the Laboratory to exceed the 10 mrem/yr standard to downwind businesses or residences</td><td>Proceed to section <i>Reporting a Release or Event</i>.</td></tr> <tr> <td>Is less than the RQ AND could NOT cause the Laboratory to exceed the 10 mrem/yr standard.</td><td>No reporting is required under CERCLA or EPCRA. Proceed to Step 4.</td></tr> </table>	<b>If the release...</b>	<b>Then...</b>	Is over the RQ AND could cause the Laboratory to exceed the 10 mrem/yr standard to downwind businesses or residences	Proceed to section <i>Reporting a Release or Event</i> .	Is less than the RQ AND could NOT cause the Laboratory to exceed the 10 mrem/yr standard.	No reporting is required under CERCLA or EPCRA. Proceed to Step 4.
<b>If the release...</b>	<b>Then...</b>						
Is over the RQ AND could cause the Laboratory to exceed the 10 mrem/yr standard to downwind businesses or residences	Proceed to section <i>Reporting a Release or Event</i> .						
Is less than the RQ AND could NOT cause the Laboratory to exceed the 10 mrem/yr standard.	No reporting is required under CERCLA or EPCRA. Proceed to Step 4.						
4	<p>If this is a release of non-rad material, it is reportable if the RQ is exceeded.</p> <table> <tr> <td><b>If the amount released is..,</b></td><td><b>Then...</b></td></tr> <tr> <td>Equal to or greater than the RQ</td><td>Proceed to Section <i>Reporting a Release or Event</i>.</td></tr> <tr> <td>Less than the RQ</td><td>Proceed to Step 3</td></tr> </table>	<b>If the amount released is..,</b>	<b>Then...</b>	Equal to or greater than the RQ	Proceed to Section <i>Reporting a Release or Event</i> .	Less than the RQ	Proceed to Step 3
<b>If the amount released is..,</b>	<b>Then...</b>						
Equal to or greater than the RQ	Proceed to Section <i>Reporting a Release or Event</i> .						
Less than the RQ	Proceed to Step 3						
5	Continue to re-evaluate the release as new data becomes available. Perform Steps 1 through 3 as necessary.						

<sup>1</sup> It should be noted that “Area sources and other sources that are subject to regulations that limits their total annual emissions should generally report their releases at or above the RQ of hazardous substances (HSs) and extremely hazardous substances (EHSs) that are caused by accidents, malfunctions, unanticipated releases and other releases that are not part of the facility’s normal operations.” Federal Register, Volume 67, No. 47, Notices FRL-7172-4, Guidance on the CERCLA Section 101(10)H, “Federally Permitted Release Definition for Certain Air Emissions”.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 13 of 24
	Effective Date: June 12, 2012	

## 5.9 DETERMINING IF A RELEASE IS REPORTABLE UNDER BIOLOGICAL OR CULTURAL REQUIREMENTS

There are a number of laws and regulations related to protection of biological and cultural resources which are applicable to the Laboratory. These laws and regulations include:

- National Environmental Policy Act
- Endangered Species Act
- Bald Eagle Protection Act
- Migratory Bird Treaty Act
- New Mexico Wildlife Conservation Act
- New Mexico Endangered Species Act
- National Historic Preservation Act
- Native American Graves Protection and Repatriation Act
- Archaeological Resources Protection Act

Reporting of impacts to biological resources under the preceding laws and associated regulations is not specifically defined. This is also the case for reporting of most cultural resources impacts under the National Historic Preservation Act. The use of professional judgment by the ENV-DO on-call representative and SME is required.

Reporting of impacts under the Native American Graves Protection and Repatriation Act is specifically governed by the following document “A Standard Operating Procedure for the Inadvertent Discovery of Native American Human Remains and Associated Funerary Objects, Sacred Objects, or Objects of Cultural Patrimony at Los Alamos National Laboratory” (LA-UR-06-6712) prepared for the Department of Energy Los Alamos Site Office (DOE LASO) by the LANL Cultural Resources Team and implemented on January 30, 2008.

Reporting of impacts under the Archaeological Resources Protection Act (ARPA) is governed in part by the Act and also by LANL Cultural Resources Team Procedure [ES-415, Archaeological Resources Protection Act.](#)

### 5.9.1 REPORTS TO DOE LASO

In general, any release or event that poses a significant impact to biological or cultural resources requires reporting to DOE LASO as soon as possible and may require reporting to LANL management and DOE HQ through the ORPS. Examples of significant impacts to biological resources include:

- Release of toxic substances into listed species habitat
- Damage to a wetland or listed species habitat by a landscape-altering event such as wildfire
- Other events that would likely result in death or injury of a threatened or endangered species

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 14 of 24
	Effective Date: June 12, 2012	

- Examples of significant impacts to cultural resources include:
- Unauthorized excavation of an archaeological site
- Damage to an archaeological or historic site
- Removal of archaeological or historic artifacts

The ENV on-call representative or SME for biological or cultural resources should notify DOE LASO as soon as possible so that DOE LASO can complete the required notifications to the appropriate agencies (e.g., U.S. Fish and Wildlife Service, State Historic Preservation Office) within 24 hours.

## **5.10 REPORTING A RELEASE OR EVENT**

If a release or event is reportable (as determined by one or more of the previous sections), the Laboratory is required to meet certain reporting requirements. The emergency notification requirements in this section must be followed upon determination that a release or event is reportable.

For informational purposes, a summary of emergency release/event reporting requirements is provided in Attachment 2. This document summarizes the primary statutes and the associated reporting requirements.

Maintain a notebook to record pertinent information about the release and to document the actions taken (see section *Records Resulting from This Procedure*).

If RCRA reporting requirements are triggered, see the flow chart in Attachment 1, Emergency Notification Requirements for RCRA.

Perform the following steps immediately after establishing that reporting will be performed:

Step	Action
1	<ul style="list-style-type: none"> <li>• Number of persons injured and the nature of injuries (e.g., life-threatening or minor injury)</li> <li>• Extent of any protective actions taken (e.g., evacuations)</li> <li>• Name, address, and telephone number of the person to contact for further information</li> <li>• Whether the substance is an HS or EHS (see definitions)</li> <li>• Associated health risks and medical attention necessary for exposed individuals</li> <li>• If available, information concerning the release of any hazardous and/or mixed waste which may endanger public or private drinking water supplies</li> <li>• Assessment of actual or potential hazards to human health or the environment outside the facility</li> <li>• If available, estimated quantity and disposition of recovered material that resulted from the incident</li> <li>• Precautions to take due to the release/event, including, in the case of fire, those associated with special hazards due to hazardous and/or mixed waste</li> <li>• Any other information which may help emergency personnel responding to the incident.</li> </ul>
2	<p><i>[For RCRA: skip this step; see flow chart (Attachment 1).]</i></p> <p>For releases of substances that are classified as CERCLA hazardous substances, contact the <b>National Response Center at 800-424-8802</b>.</p> <p><b>Note:</b> If it is an EHS but not a CERCLA hazardous substance, reporting is only necessary to state and local authorities.</p> <p><b>Exception:</b> For reportable water releases, the NRC needs to be notified <b>ONLY</b> if the release includes oil (such as a sheen on the water surface).</p>

Step	Action
3	<p><i>[For RCRA: skip this step; see flow chart (Attachment 1).]</i></p> <p>If the release is outside the LANL boundaries, or has the potential to go outside, additionally contact the <b>New Mexico State Police</b> at 505-827-9126 (State Emergency Response Commission—SERC).</p> <p>Contact the <b>Los Alamos County Police</b> at (505) 662-8222 (Local Emergency Planning Committee—LEPC).</p> <p>Contact the <b>New Mexico Environment Department</b>:</p> <ul style="list-style-type: none"> <li>• During work hours: 505-476-6000</li> <li>• 24-hr Emergency Hotline: 505-827-9329</li> </ul> <p>DOE O 231.1A Requires notification and reporting through the Facility Operations Director to DOE LASO and DOE HQ given a set of reporting criteria where the timelines from time of event and categorization given the circumstances of the event to verbal and/or written notification is 2-hours. For certain types of environmental events, the reporting criteria are more stringent than what is required in Federal and State laws and requirements (e.g. 50 percent of an RQ is ORPS reportable within the ORPS system). For all environmental events, the ENV On Call individual and/or ENV SME must ensure that the appropriate FOD or designee has been engaged as per <a href="#">P322-3, Performance Improvement from Abnormal Events</a>, and this will ensure that ORPS notification and reporting criteria are being met.</p>
4	<p>If requested by any of the above organizations, provide updates as new information becomes available.</p>

Any release to the environment that has been determined to be reportable by the ENV on-call representative or SME shall be reported through the LANL management chain in accordance with [PD1200, Emergency Management](#) and [P322-3, Performance Improvement from Abnormal Events](#). LANL management shall be notified immediately that a release notification to state or federal regulatory agencies is required so that DOE notification and reporting requirements are met. LANL management approval is not required prior to environmental reports and notifications made to the regulatory agencies in order to assure that the deadline for reporting is not exceeded.

#### 5.10.1 STEPS TO NOTIFY LANL MANAGEMENT

To notify LANL management and to complete the environmental reporting process to DOE, state and federal agencies, and Pueblo Environmental Departments, perform the following steps:

Who	Step	Action
ENV-DO on-call representative or SME	<b>1</b>	Determine that a release to the environment is reportable to state, federal, or Pueblo entities and required under regulations.  <b>NOTE:</b> ORPS reporting is a FOD and RAD responsibility and will seek advisement from ENV SMEs.
	<b>2</b>	Contact the following individuals by phone. <ul style="list-style-type: none"> <li>• Team Leader/Direct Supervisor</li> <li>• Group Leader/Deputy Group Leader</li> <li>• ENV-DO Division Leader or Designee for Reporting</li> </ul> If no direct contact can be made, leave messages by pages or phone.
ENV-DO Division Leader or Designee for Reporting	<b>3</b>	Notify the ADES&H Directorate Office and assure that the notification process continues through the LANL management chain to the PADOPs Office as specified in PD 1200-1 Emergency Management, and <a href="#">P322-3, Performance Improvement from Abnormal Events</a> .
	<b>4</b>	Notify the ADEP Directorate Office if the release originated or impacted a Solid Waste Management Unit (SWMU) or Potential Release Site (PRS).
		As per <a href="#">PD1200</a> , verbal and written notifications must be made up the management chain by use of the PADOPS report. Generally, this is the responsibility of the FOD or the FOD designee. However, ENV on-call personnel may be required to perform this function from time to time. Therefore, on-call personnel must understand who will perform this reporting function.
ENV-DO on-call representative or SME	<b>5</b>	Notify the DOE LASO program contact for the release.
	<b>6</b>	Complete the environmental reporting to state and federal agencies prior to the regulatory deadline for reporting.
	<b>7</b>	Notify Pueblo Environmental Departments of the release when potentially impacted.
SME	<b>8</b>	Complete 14-day and other follow-up reports to the state and federal agencies.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 18 of 24
	Effective Date: June 12, 2012	

If the release involved radioactive materials, the ENV on-call representative or SME will notify ENV-ES. ENV-ES will additionally notify:

EPA Region 6

(214) 665-8541

If there is a release of contaminants to a wetland or destruction of a wetland, OR if the event could result in the "take" of a threatened or endangered species (i.e., a wildfire), the ENV on-call representative or SME will notify DOE LASO Environmental Office as soon as possible. DOE LASO is required to notify U.S Fish and Wildlife Service within 24 hours.

After all the above notifications have been made, or when requested, the ENV on-call representative or SME will hand off responsibility for additional actions and follow-up to the affected environmental group. (Which group is responsible will depend on the type and location of the release and the governing regulations or statutes.) Provide all relevant records. See Section: Records Resulting from this Procedure.

In order to communicate events at LANL which may impact the public and or the environment, ENV staff will notify the New Mexico Environment Department of events that may not require formal regulatory notification. Examples of such events in the past have been small wild land fires.

## 7.0 DEFINITIONS

ADES&H: Associate Directorate for Environment, Safety, and Health

ADEP: Associate Directorate for Environmental Programs

CAA: Clean Air Act

CERCLA: Comprehensive Environmental Response, Compensation, and Liability Act

Continuous Release: A release is continuous if it “occurs without interruption or abatement or if it is routine, anticipated, intermittent, and incidental to normal operations or treatment processes.” The release must also be “stable in quantity and rate,” which means that it must be predictable and regular in the amount and rate of emission. The response procedures for continuous releases are not covered by this document. See guidance in Reporting Continuous Releases of Hazardous and Extremely Hazardous Substances under CERCLA and EPCRA. [DOE/EH-0441, guidance document, 372,099 bytes, 51 pp.], available at: <http://homer.ornl.gov/sesa/environment/guidance/cercla/CONTIN.PDF>.

CWA: Clean Water Act

ENV-DO: Environmental Protection Division

Environment: includes "water, air, land, and the interrelationship which exists among and between water, air, land, and all living things." (40 CFR 355.20)

EPCRA: Emergency Planning and Community Right-to-Know Act

ER-DO: Emergency Response Division

Extremely Hazardous Substance (EHS): EPCRA establishes emergency reporting requirements for extremely hazardous substances in 40 CFR 355, Appendix A. All of these substances are also CWA and CERCLA “hazardous” substances

FOD: Facility Operations Director

Hazardous Substance (HS): These substances are summarized in 40 CFR Part 302. As used in this context, refers to: (1) any elements, compounds, mixtures, solutions, or substances specially designated by EPA under Section 311 of the Clean Water Act (CWA) (40 CFR 116.4); (2) any toxic pollutants listed under Section 307(a) of the CWA; (3) any hazardous substances regulated under Section 311 (b)(2)(A) of the CWA; (4) any listed or characteristic RCRA hazardous waste (40 CFR 261), (5) any hazardous air pollutants listed under Section 112 of the Clean Air Act (CAA); or (6) any imminently hazardous chemical substances or mixtures regulated under Section 7 of the Toxic Substances Control Act (TSCA)

LEPC: Local Emergency Planning Committee. Locally, the contact is through Los Alamos County Police and Fire Departments

NMWQA: New Mexico Water Quality Act

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 20 of 24
	Effective Date: June 12, 2012	

NMWQCC: New Mexico Water Quality Control Commission

NPDES: National Pollutant Discharge Elimination System

NRC: National Response Center

OSC: On-Scene Commander

PADOPS: Principal Associate Director for Operations

PCBs: Polychlorinated Biphenyls

PST: Petroleum Storage Tank

RCRA: Resource Conservation and Recovery Act

Release: Any unpermitted spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing of contaminants into the environment, excluding: (1) emissions from the engine exhaust of any vehicle, (2) certain releases of source, byproduct, or special nuclear material from a nuclear incident, or (3) normal application of fertilizer

RQ: Reportable quantity

SARA: Superfund Amendments and Reauthorization Act

SERC: State Emergency Response Commission. In NM, the contact is through the NM Department of Public Safety.

SME: Subject Matter Expert.

TSCA: Toxic Substances Control Act

## 8.0 ATTACHMENTS

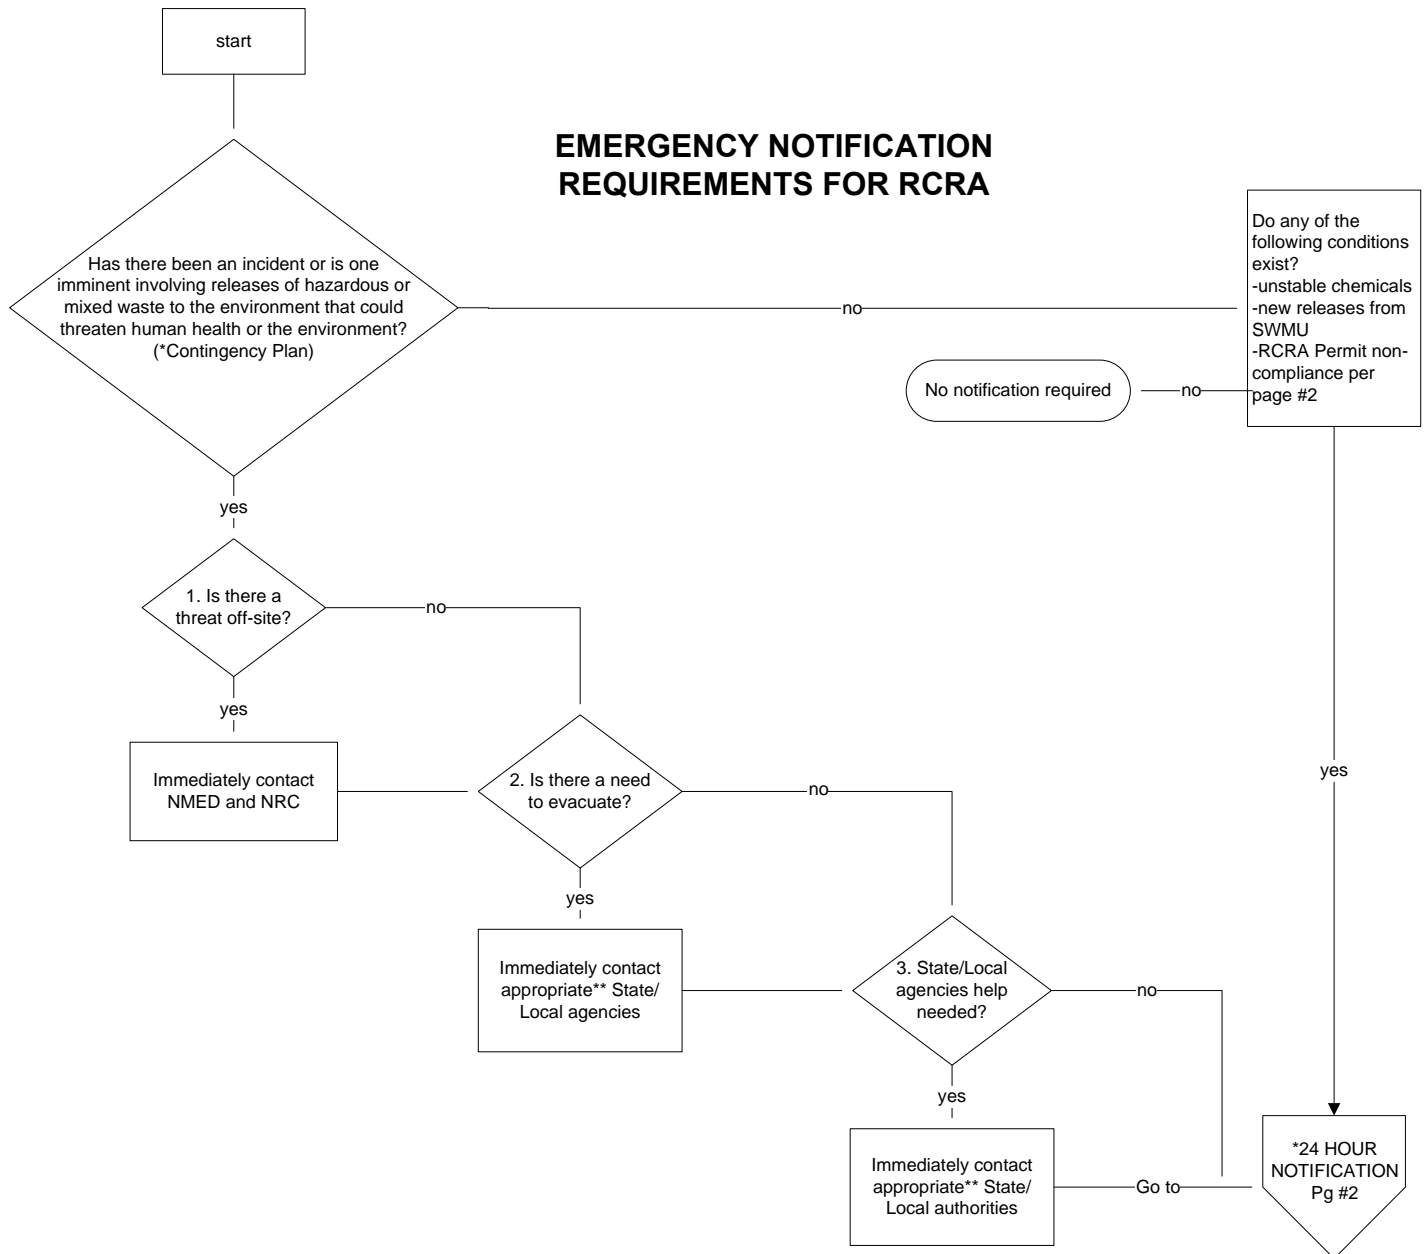

Attachment 1: Emergency Notification Requirements for RCRA

Attachment 2: Summary of Emergency Release or Event Reporting Requirements

## ATTACHMENT 1: EMERGENCY NOTIFICATION REQUIREMENTS FOR RCRA

\*Contingency Plan implementation, need for burn box use, or for detonation to be determined by EM&R

\*\*To be determined by ENV-RCRA

\*\*\*To be determined by WES-WA and ENV-RCRA

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 23 of 24
	Effective Date: June 12, 2012	

## ATTACHMENT 2: SUMMARY OF EMERGENCY RELEASE OR EVENT REPORTING REQUIREMENTS

**NOTE:** This is only a guide and does not cover all federal, state, or permit reporting requirements. Refer to the Code of Federal Regulations and the RCRA Permit for more details regarding these regulations.

STATUTE	REGULATIONS	INCIDENT	REPORT TO/BY	REPORTING
Clean Water Act(CWA)	40 CFR 110.6	Oil discharge (film/sheen/discoloration) to water surface or shoreline, or violation of water quality standards.	NRC. If not practical then EPA by person in charge of facility.	Immediately, no later than 24 hours. Follow-up not required.
Clean Water Act (CWA)	40 CFR 117.21	Discharge of hazardous substance (equal to or above RQ)	Appropriate govt. agencies by person in charge of facility.	Immediately Follow-up not required.
Clean Water Act (CWA)	40 CFR 122.28	Adverse incident which includes evidence that a person or non-target organism has been exposed to a pesticide residue or the person or non-target organism suffered a toxic or adverse effect.	Report to EPA within 24 hrs.	30 Day Adverse Incident Written Report for PGP required.
New Mexico Water Quality Control Commission Regulations (NMWQCC Regulations)	20.6.2.1203 NMAC	Discharge from any facility of oil or other water contaminant, in such quantity as may with reasonable probability injure or be detrimental to human health, animal or plant life, or property, or unreasonably interfere with the public welfare or use of the property.	New Mexico Environment Department by ENV-RCRA. Copy to EPA.	As soon as possible after learning of such a discharge, but in no event more than 24 hours thereafter (verbal notification). 7 day written report (Calendar Days) 15 day written Corrective Action Plan.
Comprehensive Environmental, Response, Compensation, and Liability Act (CERCLA)	40 CFR 302.6(a)	Hazardous substance release (Equal to or greater than RQ).	Report to NRC by ENV or WES SME	Within fifteen minutes Follow-up not required
Emergency Planning and Community Right- to-Know Act (EPCRA)	40 CFR 355.40	Release of SARA extremely hazardous substance or CERCLA hazardous substance equal to or greater than RQ.	LEPC, SERC, or local emergency response personnel (911 in case of transportation related release) by owner/operator.	Within fifteen minutes Follow-up required within seven calendar days.

Title: Environmental Reporting Requirements for Releases or Events	ENV-DO-QP-101.2	Page 24 of 24
	Effective Date: June 12, 2012	

STATUTE	REGULATIONS	INCIDENT	REPORT TO/BY	REPORTING
Resource Conservation and Recovery Act (RCRA)	40 CFR 262.34, 263.30, 264.51, 264.56 & .196, 265.51, .56 & .196, 270.14, & .30, 273.17, .37 & .54, 279.43 & .53, 280.50, .52, .53, .60,	Release, fire, or facility explosion that threatens human health or environment.	NRC/OS C/state/ local /EPA Regional Administrator by ENV-DO or ENV-RCRA SME.	Immediate and/or within 24 hours (see flow chart) Follow-up: varies from 5 to 30 days report to OSC/NRC/EPA Regional Administrator.
Toxic Substance Control Act (TSCA)	40 CFR 761.120, 761.125	PCB spill (equal to or greater than 50 ppm) with release to surface water/drinking water supplies/sewers/ grazing lands, etc. OR PCB spill over 10 pounds	NRC and EPA Region 6 Office of Pesticides and Toxic Substances by person in charge.	Within 24 hours Follow-up: as required by agency.
Operational events to include environmental releases and reporting	DOE Order 231.1A	As per criteria within DOE Order 231.1A. Examples include 50 percent of an RQ	DOE LASO and DOE HQ by FOD through ESH-OFF	Verbal notifications in 2 hours after categorization and written notifications within from 2 hours to NLT 2 business days depending on the severity and DOE criteria
N/A	N/A	Incidents which may be of concern to the public, such as wild land fires, activities which may have a visual impact that concerns the public, etc.	NMED	As soon as possible

Mr. Brent Larsen  
Water Quality Protection Division (6WQ)  
U.S. Environmental Protection Agency, Region 6  
1445 Ross Avenue, Suite 1200  
Dallas, TX 75202-2733

Dear Mr. Larsen:

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) Notice of Intent (NOI) Reporting Pursuant to Part B.12.H.**

In submitting a NOI for coverage under the new NPDES Multi-Sector General Permit, Los Alamos National Security (LANS) experienced significant problems with EPA's NeT NPDES eReporting Tool which resulted in certification of the NOI on September 3 and initial submission of a NOI with incomplete outfall attribute data and incorrect information. During this time LANS staff contacted EPA's NOI Processing Center for support and was given the recommendation to contact Region 6 personnel for further guidance. Per this direction, on September 1, 2015, Terrill Lemke left you a voicemail summarizing the issues and potential impacts of the difficulties experienced with the new electronic reporting system. For additional clarification, the following is a summary of the timeline of events associated with the NOI submission.

- Monday, August 31, 2015
  - Initiated NOI submission using the NeT NPDES eReporting Tool.

- As data was entered into each data field on the NOI form, the Tool was very slow in processing the data and allowing entry into the next field. This created a significant waiting time.
- Upon reaching the fields on the NOI form where outfall attribute data was entered the Tool began to randomly crash, repeatedly deleting all unsaved data.
- **Tuesday, September 1, 2015**
  - Tool continued to be very slow and randomly crash, repeatedly deleting all unsaved data.
  - For each outfall, when listing the constituents associated with impaired waters, the Tool's auto population feature initially displayed incorrect data which required additional editing and then eventually stopped functioning and caused the Tool to crash.
  - Much of the outfall attribute data had to be reentered multiple times before it was possible to successfully save it to the system.
  - After each save or Tool crash the eReporting Tool would close the NOI form. The time required for the Tool to repeatedly reopen the form made data entry very time consuming.
  - LANS staff contacted the EPA NOI Processing Center on the afternoon of Sept 1 for technical support:
    - NOI Processing Center staff stated that they had been "flooded" with calls over the past week on Tool problems.
    - LANS staff expressed their concern about the length of time being required to enter data and the potential inability to complete the NOI form by the Sept 2 deadline. No solution was available.
    - LANS staff explained the difficulty with entering outfall information for 73 outfalls and NOI Processing Center staff stated that they had received numerous calls on problems with entering outfall data and that some permittees couldn't even enter 20 outfalls.
    - NOI Processing Center staff recommended contacting Regional personnel to notify them of the situation and to seek additional guidance.
  - The eReporting Tool went down at approximately 3:30 pm MDT and remained down until after 9 pm MDT. This eliminated the opportunity to input data during normal business hours.
- **Wednesday, September 2, 2015**
  - Continued decrease in the performance of the eReporting Tool.
    - Increase in the time for the Tool to process information after entry of each item of data.
    - Increased frequency in the Tool crashing.
    - For each outfall, when listing the constituents associated with impaired waters, the form had to be saved after entry of each individual constituent. Entry of more than one constituent without saving would cause the Tool to crash.

- With the decreased performance of the eReporting Tool LANS staff contacted the EPA NOI Processing Center for direction and Processing Center staff stated the following:
  - They were aware of the problems with the Tool but could provide no solutions or technical direction.
  - They had been reporting daily to EPA on the problems and EPA was definitely aware of the issues.
  - When asked about taking the Tool down at 3:30 MDT on Sept. 1, staff stated that they thought the programmers may have taken the system down to assess the problems.
  - Stated again that they had received many calls about technical issues with the Tool.
  - The more data that was entered the slower the Tool would get.
  - When asked again about the possibility that LANS may not be able to get all information into the NOI, staff stated that LANS would be able to access the submitted NOI to modify/add data after the 30 day waiting period.
- eReporting Tool went down again at 3:30 pm MDT and did not come back up until after 10 pm MDT, again eliminating the opportunity to input data during normal business hours.
- The LANS NOI with all information except some remaining outfall attribute data was submitted by the Preparer at 10:50 pm MDT.
  - The LANS NOI certification signatory was prepared to certify the NOI at this time but didn't get notification that the NOI was ready for certification until 9:37 am MDT on Sept. 3, almost 11 hours later.
  - The NOI was certified on Sept 3, 2015.

Additionally, the NeT NPDES eReporting Tool did not provide dissolved Thallium as a constituent option, but only allowed the selection of total Thallium as an impaired water pollutant under a "Cause Group" when "Metals (other than Mercury)" was selected from the drop down menu. This resulted in LANS having to enter total Thallium as an impaired water pollutant in error for the following outfalls: 002, 005, 006, 007, 008, 009, 010, 011, 012, 016, 017, 018, 019, and 020. LANS appreciates any assistance you may have relative to the total Thallium vs. dissolved Thallium issue. During a subsequent quality assurance evaluation, LANS staff also determined that total Copper was erroneously entered as an impaired water pollutant for outfall 051 and needs to be deleted from the NOI.

LANS is committed to maintaining compliance with the MSGP requirements. Per Section B.12.H of the MSGP, the LANS NOI will be modified to include the remaining outfall attribute data that could not be included on the initial submission and to delete Copper as an impaired water pollutant for outfall 051. LANS coverage under the 2015 MSGP became effective on October 3, 2015, and with the NOI now accessible, actions to update the NOI have been initiated.

Mr. Brent Larsen  
ENV-DO-15-0309

**Subject:** EPA Multi-Sector General Permit (MSGP) Authorization is Active – Los Alamos National Laboratory, NPDES ID: NMR053195, NeT Submission ID: MSGP-3095

2015-10-03

Your Notice of Intent (NOI) requesting coverage for Los Alamos National Laboratory, PO Box 1663 MS K490 Los Alamos NM 87545 under EPA's Multi-Sector General Permit (MSGP) has been accepted and authorization to discharge under the MSGP became effective at the conclusion of your 30-day waiting period, on 2015-10-03.

For tracking purposes, the following NPDES ID has been assigned to your NOI: NMR053195. Attached to this email, you will find a copy of your completed NOI form. To access your NOI in NeT, please visit: [https://cdx.epa.gov/epa\\_home.asp](https://cdx.epa.gov/epa_home.asp).

As you know, the MSGP requires you to have developed a Stormwater Pollution Prevention Plan (SWPPP) prior to submitting your NOI. The MSGP also includes specific requirements for implementing control measures (e.g., minimize exposure, good housekeeping, maintenance, spill prevention and response), conducting self-inspections and visual assessments of your discharges, taking corrective actions, and conducting staff training. You must comply with any specific requirements applicable to your industrial sector(s) in Part 8 and any state/tribal-specific requirements in Part 9 (see <http://water.epa.gov/polwaste/npdes/stormwater/EPA-Multi-Sector-General-Permit-MSGP.cfm>). You are also required to submit an Annual Report in accordance with Part 7.5 of the MSGP that will contain the results from your past year's routine facility inspections, quarterly visual assessments, and corrective actions. Annual Reports must be submitted to EPA through NeT.

The MSGP includes five types of required analytical monitoring, one or more of which may apply to your discharge:

- Quarterly benchmark monitoring (see Part 6.2.1 and Part 8);
- Annual effluent limitations guidelines monitoring (see Part 6.2.2 and Part 8);
- State- or tribal-specific monitoring (see Part 6.2.3 and Part 9);
- Impaired waters monitoring (see Part 6.2.4); and
- Other monitoring as required by EPA (see Part 6.2.5).

Monitoring requirements in the MSGP (i.e., parameters required to be monitored and sample frequency) will be prepopulated on your electronic Discharge Monitoring Report (DMR) in EPA's NetDMR system, which is accessed at <http://www.epa.gov/netdmr/>. Where you have determined that no monitoring requirements apply to your discharge, there is no need to access the NetDMR system. In order to obtain access to this system, you must complete the electronic signature process. Please refer to the following guidance for information about submitting monitoring reports through NetDMR:

<http://water.epa.gov/polwaste/npdes/stormwater/Stormwater-eNOI-System-for-EPAs-MultiSector-General-Permit.cfm>.

Please note that this email does not represent a determination by EPA regarding the validity of the information you provided in your NOI. Your eligibility for coverage under this permit is based on the validity of the certification you provided. Your electronic signature on the NOI form certifies that you have read, understood, and are implementing all of the applicable requirements. An important aspect of this certification requires that you have correctly determined whether you are eligible for coverage under this permit.

The 2014 MSGP and additional guidance are available at:

<http://water.epa.gov/polwaste/npdes/stormwater/EPA-Multi-Sector-General-Permit-MSGP.cfm>. Please contact your EPA Regional permitting authority at [lee.won@epa.gov](mailto:lee.won@epa.gov); [lescore.nasrin@epa.gov](mailto:lescore.nasrin@epa.gov); [emily@avanticorporation.com](mailto:emily@avanticorporation.com); [farris.erika@epa.gov](mailto:farris.erika@epa.gov); [Christiane@avanticorporation.com](mailto:Christiane@avanticorporation.com); [bius.catherine@epa.gov](mailto:bius.catherine@epa.gov) for more information.

This is an automated response; please do not reply to this email.

Washington, D.C. 20460

To Whom It May Concern:

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR05GB21, Multi-Sector General Permit (MSGP) 2015 Comprehensive Site Inspection Documentation**

The purpose of this letter is to notify EPA that Los Alamos National Security (LANS) conducted its Comprehensive Site Inspection at Los Alamos National Laboratory September 8 through 29, 2015, in accordance with Part 4.3 of the 2008 MSGP. On October 3, 2015, the LANS authorization to discharge under the 2015 MSGP became effective. The 2015 Annual Report would have been due on November 13, 2015 (45 days after the last day of the inspection) under the 2008 MSGP. However, due to coverage under the new 2015 MSGP superseding the 2008 requirements, LANS will provide the information collected from the 2015 Comprehensive Site Inspection and other required documentation identified in Part 7.5 of the 2015 MSGP in the 2015 Annual Report to be submitted by January 30<sup>th</sup> 2016. This Report will contain the following:

- A summary of the past year's routine facility inspection documentation (2015 MSGP Part 3.1.2) from September 1, 2015 through the end of 2015 calendar year;
- A summary of the past years quarterly visual assessment documentation (2015 MSGP Part 3.2.2);
- For any four-sample (minimum) average benchmark monitoring exceedance, if after reviewing the selection, design, installation, and implementation of control measures and considering whether any modifications are necessary to meet the effluent limits in the permit, a determination is made that no further pollutant reductions are technologically available and economically practicable and

USEPA MSGP Reports  
ENV-DO-15-0328

achievable in light of best industry practice, the rationale for no further reductions being achievable (2015 MSGP Part 6.2.1.2); and

- A summary of the past year's corrective action documentation (2015 MSGP Part 4.4) from September 1, 2015 through the end of the 2015 calendar year.

The Annual Report will be signed and certified in accordance with Appendix B, Subsection 11. Please contact Terrill W. Lemke at (505) 665-2397 or Holly Wheeler at (505) 667-1312 if you have questions.

## 2015 NPDES Multi-Sector General Permit For Stormwater Discharges Associated With Industrial Activity (MSGP) Forms

United States Environmental Protection Agency  
1200 Pennsylvania Ave, NW Washington, DC 20460

Note: This is a "smart form"; as you fill out the form, additional questions will appear that you will need to answer.

### Permit Information

#### 1. What action would you like to take? \*

File a New Notice of Intent Form

Submission of this Notice of Intent (NOI) constitutes notice that the operator identified in the Facility Operator Information section of this form requests authorization to discharge pursuant to the NPDES Stormwater Multi-Sector General Permit (MSGP) permit number identified in the Permit Information section of this form. Submission of this NOI also constitutes notice that the operator identified in the Facility Operator Information section of this form meets the eligibility conditions of Part 1.1 of the MSGP for the facility identified in the Facility Information section of this form. To obtain authorization, you must submit a complete and accurate NOI form. Discharges are not authorized if your NOI is incomplete or inaccurate or if you were never eligible for permit coverage.

#### Operator Name (Organization Name) \*

LOS ALAMOS NATIONAL LABORATORY

#### Operator Name as Noted by the NOI Preparer

Los Alamos National Security, LLC

#### 2. Select the state/territory where your facility is located \*

NM

#### 3. Is your facility located on Indian Country lands? \*

☐ Yes ☒ No

#### 4. Are you requesting coverage as a "federal operator" as defined in Appendix A? \*

☒ Yes ☐ No

5. Are you a new discharger or a new source as defined in Appendix A? \*

☐ Yes ☒ No

5a. Have stormwater discharges from your facility been covered previously under an NPDES permit? \*

☒ Yes ☐ No

Saa. Provide your most current NPDES ID (i.e., permit tracking number) if you had coverage under EPA's MSGP 2008 or the NPDES permit number if you had coverage under an EPA individual permit \*

NMR05GB21

6. Do you directly discharge to any of the waters of the U.S. that are designated by the state or tribal authority under its antidegradation policy as a Tier 3 water (Outstanding Natural Resource Water) (See Appendix L)? Your project will be considered to discharge to a Tier 3 water if the first water of the US to which you discharge is identified by a state, tribe, or EPA as a Tier 3 water. For discharges that enter a storm sewer system prior to discharge, the first water of the US to which you discharge is the waterbody that receives the stormwater discharge from the storm sewer system. \*

☐ Yes ☒ No

7. Does your facility directly discharge to a Federal CERCLA site listed in Appendix P? For the purposes of this permit, a permittee discharges to a Federal CERCLA site if the discharge flows directly into the site through its own conveyance, or through a conveyance owned by others, such as a municipal separate storm sewer system. \*

☐ Yes ☒ No

8. Has the Stormwater Pollution Prevention Plan (SWPPP) been prepared in advance of filing this NOI, as required? \*

☒ Yes ☐ No

9. By indicating "Yes", I confirm that I understand that the MSGP only authorizes the allowable stormwater discharges in Part 1.1.2 and the allowable non-stormwater discharges in Part 1.1.3. Any discharges not expressly authorized under the MSGP are not covered by the MSGP and they cannot become authorized by disclosure to EPA and/or a state via this Notice of Intent to be covered by the permit or by any other means (e.g., in the Stormwater Pollution Prevention Plan or during an inspection). If any discharges requiring NPDES permit coverage other than the allowable stormwater and non-stormwater discharges listed in Parts 1.1.2 and 1.1.3 will be discharged, they must be covered under another NPDES permit. \*

☒ Yes ☐ No

10. Master Permit Number

NMR050000

#### A: Facility Operator Information

1. Operator Name (Organization Name) \*

LOS ALAMOS NATIONAL LABORATORY

2. Street \*

PO Box 1663

3. Supplemental Address

22. Is your facility presently inactive and unstaffed? \*

☐ Yes

☒ No

### C: Discharge Information

1. Does your facility discharge into any saltwater receiving waters? \*

☐ Yes

☒ No

2. What is the hardness of your receiving water(s) (see Appendix J) \*

50-74.99 mg/L

3. Identify if the following Effluent Limitation Guideline(s) apply to any of your discharges

40 CFR Part/Subpart: Part 423	Eligible Discharges: Coal pile runoff at steam electric generating facilities	Affected MSGP Sector: O	New Source Date: 11/19/1982, 10/8/1974 <sup>1</sup>	Does your facility have any discharges subject to this effluent limitation guideline? *
				<input type="radio"/> Yes <input checked="" type="radio"/> No
40 CFR Part/Subpart: Part 429, Subpart I	Eligible Discharges: Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas	Affected MSGP Sector: A	New Source Date: 1/26/1981	Does your facility have any discharges subject to this effluent limitation guideline? *
				<input type="radio"/> Yes <input checked="" type="radio"/> No
40 CFR Part/Subpart: Part 443, Subpart A	Eligible Discharges: Runoff from asphalt emulsion facilities	Affected MSGP Sector: D	New Source Date: 7/28/1975	Does your facility have any discharges subject to this effluent limitation guideline? *
				<input checked="" type="radio"/> Yes <input type="radio"/> No

### Outfalls

4. List all of the stormwater outfalls from your facility. Each outfall must be identified by a unique 3-digit ID (e.g., 001, 002) or a 4-digit ID. Also provide the latitude and longitude in decimal degrees for each outfall.

A. Outfall ID \*

002

+

B. Latitude (Decimal Degrees) \*

35.875801

-

C. Longitude (Decimal Degrees) \*

106.327538

Lookup Receiving Waters Information

Delete Outfall

(This button will prepopulate the receiving water information associated with your outfall on your form. You may edit the information that is returned if you believe it is incorrect)

If for any reason the Lookup Receiving Water Information button does not prepopulate your form with receiving waters information, you must manually enter the information on your form.

### Outfall Section

1. Provide the name of the first water of the U.S. that receives stormwater directly from the outfall and/or from the MS4 that the outfall discharges to. (You may edit the name of the water of the U.S. that was returned if incorrect.) \*

SANDIA CANYON (SIGMA CANYON TO NPDES OUTFALL 001)

2. Is the receiving water listed as impaired on the 303(d) list and in need of a TMDL? \*

☒ Yes ☐ No

4. List the pollutants that are causing the impairment:

Pollutant

Aluminum, total (as Al)

Delete Pollutant

Pollutant

Copper, total (as Cu)

Stormwater Notice Processing Center  
Mail Code 4203M, ATTN: 2015 MSGP Reports  
U.S. EPA  
1200 Pennsylvania Avenue, NW  
Washington, DC 20460

To Whom It May Concern:

**Subject: Transmittal of the National Pollutant Discharge Elimination System (NPDES) Notice of Intent (NOI) For Stormwater Discharges Associated with Industrial Activity under the Multi-Sector General Permit (MSGP) Tracking No. NMR053195**

The purpose of this letter is to transmit a complete/correct NOI for stormwater discharges associated with industrial activity under the MSGP for Los Alamos National Laboratory (LANL) (Enclosure 1) on behalf of Los Alamos National Security LLC. LANS operates LANL for the Department of Energy. Per Section G of the attached NOI, three concurrence letters from the United States Department of Interior, Fish and Wildlife Service are provided in Enclosure 2. While submitting a NOI for coverage under the new 2015 MSGP, LANS experienced significant problems with EPA's Net NPDES eReporting tool, which resulted in the initial submission of a NOI with incomplete outfall attribute data and incorrect information. The details of these issues were provided in a letter sent to Mr. Bret Larsen of EPA Region 6 on October 29, 2015 (ENV-DO-15-0309) (Enclosure 3).

The initial NOI was submitted in the Net eReporting tool on 9/02/2015, which resulted in a follow-up e-mail on 9/03/2015 from [NeT@epa.gov](mailto:NeT@epa.gov) stating the NOI requesting coverage for Los Alamos National Laboratory under EPA's 2015 MSGP had been certified and submitted to EPA for review, and assigned NPDES ID NMR053195. Please note, this tracking number has been inserted in Section B of Enclosure 1 to prevent confusion or assignment of an additional tracking number. Authorization to discharge under the 2015 MSGP was sent to LANS on 10/03/2015.

Repeated attempts to update the NOI via the "Change NOI" form have resulted in the same system problems without successful submittal of all required information via NeT. As such, an e-mail request for waiver pursuant to Part 7.1 of the 2015 MSGP was sent to Ms. Nasim Jahan on 2/05/2016. On 2/09/2016 Ms. Jahan responded by indicating "LANL can submit their paper copy."

LANL has 14 industrial sites covering eight (8) sectors, with 74 outfalls (26 monitored outfalls and 48 associated substantially identical outfalls) discharging to five (5) assessment units on the Clean Water Act 303(d) list (impaired waters without an EPA-approved or established TMDL pursuant to Part 6.2.4.1 of the 2015 MSGP). In addition, due to extended frozen conditions in the winter and the semi-arid climate, LANS implements an alternate monitoring period of four (4) two-month monitoring quarters for benchmark values as identified below, in accordance with Part 6.1.6 of the 2015 MSGP. This does not coincide with the four (4) three month monitoring quarters for benchmark values currently in the NetDMR.

April 1 through May 31

June 1 through July 31

August 1 through September 30

October 1 through November 30

To facilitate complete and accurate information in the NeT reporting system, LANS has provided an additional table (Enclosure 4) containing sector-specific information per MSGP site within the 36 square mile facility and listed each site's associated outfalls. The premise for providing this information is to determine whether the NeT tool can prepopulate the electronic Discharge Monitoring Report (DMR) form based on this information without causing inaccuracies or rejected data (non-fillable forms due to unresolvable hard errors). In addition, LANS is concerned that incomplete or incorrect NOI information will perpetuate a recurring prohibitive "domino effect" on subsequent electronic DMR filing and "Change NOI" forms.

LANS respectfully requests consideration of waivers for electronic submittal of MSGP DMRs using the NetDMR system until it is determined whether the attached NOI can be submitted by EPA's Subcontractor into the NeT tool. Once this occurs, LANS can determine how information is populating the NetDMR system and whether it will accept applicable data without causing prohibitive hard errors.

Any additional direction or guidance you may have would be appreciated. Please contact Terrill Lemke of Environmental Protection and Compliance, Compliance Programs (EPC-CP) at (505) 665-2397 if you have any questions regarding this NOI.

Sincerely,

Michael T. Brandt, DrPH, CIH  
Associate Director  
Environment, Safety & Health  
Los Alamos National Security, LLC  
Los Alamos National Laboratory

# **ENCLOSURE 1**

**Notice of Intent (NOI) For Stormwater Discharges  
Associated With Industrial Activity Under the NPDES  
Multi-Sector General Permit**

**ADESH-16-045**

**LA-UR-16-21721**

**Date:** MAR 22 2016

Submission of this Notice of Intent (NOI) constitutes notice that the operator identified in Section C of this form requests authorization to discharge pursuant to the NPDES Stormwater Multi-Sector General Permit (MSGP) permit number identified in Section B of this form. Submission of this NOI also constitutes notice that the operator identified in Section C of this form meets the eligibility conditions of Part 1.1 of the MSGP for the facility identified in Section D of this form. To obtain authorization, you must submit a complete and accurate NOI form. Discharges are not authorized if your NOI is incomplete or inaccurate or if you were never eligible for permit coverage. Refer to the instructions at the end of this form to complete your NOI.

**A. Approval to Use Paper NOI Form**

1. Have you been granted a waiver from electronic reporting from the EPA Regional Office\*? ☒ YES ☐ NO

If yes, check which waiver you have been granted, the name of the EPA Regional Office staff person who granted the waiver, and the date of approval:

Waiver granted: ☐ The owner/operator's headquarters is physically located in a geographic area (i.e., ZIP code or census tract) that is identified as under-served for broadband Internet access in the most recent report from the Federal Communications Commission.

☒ The owner/operator has issues regarding available computer access or computer capability.

Name of EPA staff person that granted the waiver:

N a s i m J a h a n

Date approval obtained:

0 2 / 0 9 / 2 0 1 6

\* Note: You are required to obtain approval from the applicable EPA Regional Office prior to using this paper NOI form. If you have not obtained a waiver, you must file this form electronically using the NPDES eReporting Tool (Net) at <http://water.epa.gov/polwaste/npdes/stormwater/Stormwater-eNOI-System-for-EPA-MultiSector-General-Permit.cfm>

**B. Permit Information**

NPDES ID (EPA Use Only):

N M R 0 5 3 1 9 5

1. Master Permit Number: N M R 0 5 0 0 0 0

(see Appendix C of the MSGP for the list of eligible master permit numbers)

2. Are you a new discharger or a new source as defined in Appendix A? ☐ YES ☒ NO (If yes, skip to Part C of this form).

3. If you are not a new discharger or a new source, have stormwater discharges from your facility been covered previously under an NPDES permit?

☒ YES ☐ NO

If yes, provide the NPDES ID if you had coverage under EPA's 2008 MSGP or the NPDES ID if you had coverage under an EPA individual permit:

N M R 0 5 G B 2 1

**C. Facility Operator Information**

1. Operator Information:

Operator Name: L o s A l a m o s N a t i o n a l S e c u r i t y L L C

Mailing Address:

Street: P O B o x 1 6 6 3

City: L o s A l a m o s

State: N M ZIP Code: 8 7 5 4 5 -

County or Similar Government Subdivision: L o s A l a m o s

Phone: 5 0 5 - 6 6 5 - 2 3 9 7 Ext.

E-mail: t l e m k e @ l a n l . g o v

2. Operator Point of Contact Information:

First Name, Middle Initial, Last Name: T e r r i l l W L e m k e

Title: E n v i r o n m e n t a l M a n a g e r

3. NOI Preparer Information (Complete if NOI was prepared by someone other than the certifier):

First Name, Middle Initial, Last Name: H o l l y L W h e e l e r

Organization: L o s A l a m o s N a t i o n a l S e c u r i t y L L C

Phone: 5 0 5 - 6 6 7 - 1 3 1 2 Ext.

E-mail: h b e n s o n @ l a n l . g o v

**D. Facility Information**

1. Facility Name: L o s A l a m o s N a t i o n a l L a b o r a t o r y

2. Facility Address:  
Street/Location: P O B o x 1 6 6 3  
City: L o s A l a m o s State: N M ZIP Code: 8 7 5 4 5  
County or Similar Government Subdivision: L o s A l a m o s

3. Latitude/Longitude for the facility:  
Latitude: 3 5 8 7 2 7 7° N (decimal degrees) Longitude: 1 0 6 3 2 1 2 7° W (decimal degrees)  
Latitude/Longitude Data Source: ☐ Map ☐ GPS ☒ Other  
If you used a USGS topographic map, what was the scale? \_\_\_\_\_  
Horizontal Reference Datum: ☐ NAD 27 ☐ NAD 83 ☒ WGS 84

4. Is your facility located on Indian Country lands? ☐ YES ☒ NO  
If yes, provide the name of the Indian tribe associated with the area of Indian country (including name of Indian reservation, if applicable): \_\_\_\_\_

5. Are you requesting coverage under this NOI as a "federal operator" as defined in Appendix A? ☒ YES ☐ NO

6. What is the ownership type of the facility?  
☒ Federal Facility (U.S. Government) ☐ Privately Owned Facility ☐ Municipality ☐ County Government  
☐ Corporation ☐ State Government ☐ Tribal Government ☐ School District  
☐ District ☐ Mixed Ownership (e.g. Public/Private) ☐ Municipal or Water District

7. Estimated area of industrial activity at your facility exposed to stormwater: 131.36 (to the nearest quarter acre)

**8. Sector-Specific Information**

Identify the 4-digit Standard Industrial Classification (SIC) code or 2-letter Activity Code that best represents the products produced or services rendered for which your facility is primarily engaged, as defined in the MSGP, and the applicable sector and subsector of your primary industrial activity (See Appendix D):

Primary SIC Code: 3 4 4 9 OR Primary Activity Code:     
Sector: A A Subsector: A A 1

Identify the applicable sector(s) and subsector(s) of any co-located industrial activity for which you are requesting permit coverage:

Sector: P Subsector: P 1 Sector: K Subsector: K 1 Sector: A Subsector: A 4 Sector: D Subsector: D 1  
Sector: O Subsector: O 1 Sector: F Subsector: F 4 Sector: N Subsector: N 2 Sector:    Subsector:   

If you are a Sector S (Air Transportation) facility, do you anticipate using more than 100,000 gallons of pure glycol in glycol-based deicing fluids and/or 100 tons or more of urea on an average annual basis? ☐ YES ☐ NO

If you are a Sector G (Metal Mining) facility, do you have discharges from waste rock and overburden piles? ☐ YES ☐ NO

Check the type of ore you mine at your facility: ☐ Tungsten Ore ☐ Nickel Ore ☐ Aluminum Ore

☐ Mercury Ore ☐ Iron Ore ☐ Platinum Ore ☐ Titanium Ore ☐ Vanadium Ore ☐ Molybdenum ☐ Uranium, Radium, and/or Vanadium Ore

9. Is your facility presently inactive and unstaffed?\* ☐ YES ☒ NO

\* Note that if your facility becomes inactive and unstaffed during the permit term, you must submit an NOI modification to reflect the change.

**E. Discharge Information**

1. By indicating "Yes" below, I confirm that I understand that the MSGP only authorizes the allowable stormwater discharges in Part 1.1.2 and the allowable non-stormwater discharges listed in Part 1.1.3. Any discharges not expressly authorized in this permit cannot become authorized or shielded from liability under CWA section 402(k) by disclosure to EPA, state, or local authorities after issuance of this permit via any means, including the Notice of Intent (NOI) to be covered by the permit, the Stormwater Pollution Prevention Plan (SWPPP), during an inspection, etc. If any discharges requiring NPDES permit coverage other than the allowable stormwater and non-stormwater discharges listed in Parts 1.1.2 and 1.1.3 will be discharged, they must be covered under another NPDES permit. ☒ YES

**2. Federal Effluent Limitation Guidelines**

Are you requesting permit coverage for any stormwater discharges subject to effluent limitation guidelines? ☒ YES ☐ NO

If yes, which effluent limitation guidelines apply to your stormwater discharges?

40 CFR Part/Subpart	Eligible Discharges	Affected MSGP Sector	New Source Date	Check if Applicable
Part 411, Subpart C	Runoff from material storage piles at cement manufacturing facilities	E	2/20/1974	<input type="checkbox"/>
Part 418 Subpart A	Runoff from phosphate fertilizer manufacturing facilities that comes into contact with any raw materials, finished product, by-products or waste products (SIC 2874)	C	4/8/1974	<input type="checkbox"/>
Part 423	Coal pile runoff at steam electric generating facilities	O	11/19/1982 10/8/1974 <sup>1</sup>	<input type="checkbox"/>
Part 429, Subpart I	Discharges resulting from spray down or intentional wetting of logs at wet deck storage areas	A	1/26/1981	<input type="checkbox"/>
Part 436, Subpart B, C, or D	Mine dewatering discharges at crushed stone mines, construction sand and gravel mines, or industrial sand mines	J	N/A	<input type="checkbox"/>
Part 443, Subpart A	Runoff from asphalt emulsion facilities	D	7/28/1975	<input checked="" type="checkbox"/>
Part 445, Subparts A & B	Runoff from hazardous waste and non-hazardous waste landfills	K, L	2/2/2000	<input type="checkbox"/>
Part 449	Runoff containing urea from airfield pavement deicing at existing and new primary airports with 1,000 or more annual non-propeller aircraft departures	S	6/15/2012	<input type="checkbox"/>

<sup>1</sup>NSPS promulgated in 1974 were not removed via the 1982 regulation; therefore wastewaters generated by Part 423-applicable sources that were New Sources under the 1974 regulations are subject to the 1974 NSPS.

3. Receiving Waters Information: (Attach a separate list if necessary)

List all of the stormwater outfalls from your facility. Each outfall must be identified by a unique 3-digit ID (e.g., 001, 002). Also provide the latitude and longitude in degrees decimal for each outfall.		For each outfall, provide the following receiving water information:		
		Provide the name of the first water of the U.S. that receives stormwater directly from the outfall and/or from the MS4 that the outfall discharges to:	If the receiving water is impaired (on the CWA 303(d) list), list the pollutants that are causing the impairment:	If a TMDL been completed for this receiving waterbody, providing the following information:
Outfall ID	002	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted Polychlorinated Biphenyls (PCBs) Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.875797			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.327580			
Outfall ID	004	Two Mile Canyon (Pajarito to headwaters)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.871431			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.323832			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	005	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.873919			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.320746			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	006	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.874011			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.319858			

If substantially identical to other outfall, list identical outfall ID: 005

Outfall ID	009	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.874843			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.319412			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	007	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.874014			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.319203			

If substantially identical to other outfall, list identical outfall ID: 009

Outfall ID	008	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.874617			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.318925			
If substantially identical to other outfall, list identical outfall ID: 009				
Outfall ID	010	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.875402			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.320301			
If substantially identical to other outfall, list identical outfall ID: 009				
Outfall ID	012	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.875532			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.320884			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	011	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.875563			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.320744			
If substantially identical to other outfall, list identical outfall ID: 012				

Outfall ID	018	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872834			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.317653			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	013	Mortandad Canyon (Within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.870797			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.317867			

If substantially identical to other outfall, list identical outfall ID: 018

Outfall ID	014	Mortandad Canyon (Within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.870890			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.317393			

If substantially identical to other outfall, list identical outfall ID: 018

Outfall ID	015	Mortandad Canyon (Within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.871389			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.316397			

If substantially identical to other outfall, list identical outfall ID: 018

Outfall ID	016	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872447			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.316721			
If substantially identical to other outfall, list identical outfall ID: 018				
Outfall ID	017	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872599			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.317066			
If substantially identical to other outfall, list identical outfall ID: 018				
Outfall ID	019	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872682			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.318467			
If substantially identical to other outfall, list identical outfall ID: 018				
Outfall ID	020	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A

If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	027	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872401			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.313391			
If substantially identical to other outfall, list identical outfall ID: 026				
Outfall ID	028	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.872505			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.313542			
If substantially identical to other outfall, list identical outfall ID: 026				

Outfall ID	029	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.873969			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.313281			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	031	Mortandad Canyon (within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.869227			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.305685			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	030	Mortandad Canyon (within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.869325			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.306926			

If substantially identical to other outfall, list identical outfall ID: 031

Outfall ID	032	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.870741			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.306812			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	033	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.870712			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.306443			

If substantially identical to other outfall, list identical outfall ID: 032

Outfall ID	034	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.870603			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.306055			

If substantially identical to other outfall, list identical outfall ID: 032

Outfall ID	035	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.870474			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.305432			

If substantially identical to other outfall, list identical outfall ID: 032

Outfall ID	036	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867825			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.293388			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	037	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867859			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.292992			

If substantially identical to other outfall, list identical outfall ID: 036

Outfall ID	039	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867826			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.291726			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	038	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867855			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.292211			

If substantially identical to other outfall, list identical outfall ID: 039

Outfall ID	040	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867839			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.291955			

If substantially identical to other outfall, list identical outfall ID: 039

Outfall ID	042	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.867047			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.289163			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	041	Mortandad Canyon (within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.866377			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.291397			
If substantially identical to other outfall, list identical outfall ID: 042				
Outfall ID	043	Mortandad Canyon (within LANL)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.866084			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.290165			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	047	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.844895			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.264513			
If substantially identical to other outfall, list identical outfall ID: _____				

Outfall ID	044	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.845868			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.265279			
If substantially identical to other outfall, list identical outfall ID: 047				
Outfall ID	045	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.845586			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.265214			
If substantially identical to other outfall, list identical outfall ID: 047				
Outfall ID	046	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.845200			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.264844			
If substantially identical to other outfall, list identical outfall ID: 047				
Outfall ID	048	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.844590			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.265044			
If substantially identical to other outfall, list identical outfall ID: 047				

Outfall ID	049	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.837228			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.254840			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	050	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.835746			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.250832			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	051	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.830143			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.242662			
If substantially identical to other outfall, list identical outfall ID: _____				
Outfall ID	052	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.831852			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.242928			
If substantially identical to other outfall, list identical outfall ID: 051				

Outfall ID	053	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829232			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.236793			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	065	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829028			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.236029			

If substantially identical to other outfall, list identical outfall ID: 053

Outfall ID	066	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.830185			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.236107			

If substantially identical to other outfall, list identical outfall ID: 053

Outfall ID	069	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.830285			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.234518			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	054	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829036			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.235125			
If substantially identical to other outfall, list identical outfall ID: 069				
Outfall ID	055	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829173			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.235121			
If substantially identical to other outfall, list identical outfall ID: 069				
Outfall ID	056	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829310			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.236107			
If substantially identical to other outfall, list identical outfall ID: 069				
Outfall ID	057	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829440			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.235117			
If substantially identical to other outfall, list identical outfall ID: 069				

Outfall ID	058	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829573			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.235112			

If substantially identical to other outfall, list identical outfall ID: 069

Outfall ID	059	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A
Latitude	35.829711			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.235108			

If substantially identical to other outfall, list identical outfall ID: 069

Outfall ID	060	Pajarito Canyon (within LANL below Arroyo de la Delfe)	Aluminum, total PCBs	TMDL Name and ID: N/A

Outfall ID	070	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.832404			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.240510			

If substantially identical to other outfall, list identical outfall ID: 072

Outfall ID	071	Canada del Buey (within LANL)	Aluminum, total Gross Alpha, adjusted PCBs	TMDL Name and ID: N/A
Latitude	35.832701			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.240994			

If substantially identical to other outfall, list identical outfall ID: 072

Outfall ID	073	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.874819			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.324283			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID	074	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.875034			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.327328			

If substantially identical to other outfall, list identical outfall ID: 073

Outfall ID	075	Sandia Canyon (Sigma Canyon to NPDES outfall 001)	Aluminum, total Copper, dissolved Gross Alpha, adjusted PCBs Thallium, dissolved	TMDL Name and ID: N/A
Latitude	35.871154			Pollutant(s) for which there is a TMDL: N/A
Longitude	-106.312940			

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

Outfall ID				TMDL Name and ID:
Latitude				Pollutant(s) for which there is a TMDL:
Longitude				

If substantially identical to other outfall, list identical outfall ID: \_\_\_\_\_

4. Provide the following information about your outfall latitude longitude:

Latitude/Longitude Data Source: ☐ Map ☒ GPS ☐ Other

If you used a USGS topographic map, what was the scale? \_\_\_\_\_

Horizontal Reference Datum: ☐ NAD 27 ☒ NAD 83 ☐ WGS 84

5. Does your facility discharge into a Municipal Separate Storm Sewer System (MS4)? ☐ YES ☒ NO

If yes, provide the name of the MS4 operator: N/A

6. Check if you discharge to any of the waters of the U.S. that are designated by the state or tribal authority under its antidegradation policy as a Tier 2 (or Tier 2.5) water (water quality exceeds levels necessary to support propagation of fish, shellfish, and wildlife and recreation in and on the water) or as a Tier 3 water (Outstanding National Resource Water)? (See Appendix L).

☐ Tier 2/2.5. Provide the name(s) of receiving water(s): \_\_\_\_\_

☐ Tier 3 (Outstanding National Resource Waters)\*

\* **Note: You are ineligible for coverage if you are a new discharger or new source to waters designated as Tier 3 (outstanding national resource waters) for antidegradation purposes under 40 CFR 131.13(a)(3).**

7. If you are subject to benchmark monitoring requirements for a hardness-dependent metal, what is the hardness of your receiving water(s) (see Appendix J)?  
57 (mg/L)

8. If you are subject to benchmark monitoring requirements for a hardness-dependent metal, does your facility discharge into any saltwater receiving waters?  
☐ YES ☒ NO

9. Does your facility discharge to a federal CERCLA site listed in Appendix P? ☐ YES ☒ NO

If yes, did you notify the EPA Regional Office in advance of filing your NOI, and did the EPA Regional Office determine that you are eligible for permit coverage pursuant to Part 1.1.4.10\*? ☐ YES ☐ NO

\* **Note: If you discharge to a federal CERCLA site listed in Appendix P, you are ineligible for coverage under this permit unless you notify the EPA Regional Office in advance and the EPA Regional Office determines you are eligible coverage under this permit. In determining your eligibility for coverage under this Part, the EPA Regional Office may evaluate whether you have included adequate controls and/or procedures to ensure that your discharges will not lead to recontamination of aquatic media at the CERCLA Site such that it will to cause or contribute to an exceedance of a water quality standard.**

#### F. Stormwater Pollution Prevention Plan (SWPPP) Information

1. Has the SWPPP been prepared in advance of filing this NOI, as required? ☒ YES ☐ NO

2. SWPPP Contact Information:

First Name, Middle Initial, Last Name: H o l l i y L W h e e l e r

Professional Title: E n v i r o n m e n t a l P r o f e s s i o n a l

Phone: 505 - 667 - 1312 Ext.

E-mail: h b e n s o n @ l a n l . g o v

3. SWPPP Availability:

Your current SWPPP or certain information from your SWPPP must be made available through one of the following two options. Select one of the options and provide the required information\*:

\* **Note: You are not required to post any confidential business information (CBI) or restricted information (as defined in Appendix A) (such information may be redacted), but you must clearly identify those portions of the SWPPP that are being withheld from public access.**

☒ **Option 1:** Maintain a current copy of your SWPPP on an Internet page (Universal Resource Locator or URL).

Provide the web address URL: eprr.lanl.gov

☐ **Option 2:** Provide the following information from your SWPPP:

A. Describe your onsite industrial activities exposed to stormwater (e.g., material storage; equipment fueling, maintenance, and cleaning; cutting steel beams), and potential spill and leak areas:

B. List the pollutant(s) or pollutant constituent(s) associated with each industrial activity exposed to stormwater that could be discharged in stormwater and any authorized non-stormwater discharges listed in Part 1.1.3:

C. Describe the control measures you will employ to comply with the non-numeric technology-based effluent limits required in Part 2.1.2 and Part 8, and any other measures taken to comply with the requirements in Part 2.2 Water Quality-Based Effluent Limitations (see Part 5.2.4):

D. Provide a schedule for good housekeeping and maintenance (see Part 5.2.5.1) and a schedule for all inspections required in Part 4 (see Part 5.2.5.2):

#### G. Endangered Species Protection

1. Using the instructions in Appendix E of the MSGP, under which endangered species criterion listed in Part 1.1.4.5 are you eligible for coverage under this permit (only check 1 box)?\*

☐ A ☐ B ☐ C ☒ D ☐ E

\* **Note:** After you submit your NOI and before your NOI is authorized, EPA may notify you if any additional controls are necessary to ensure your discharges have no likely adverse effects on listed species and critical habitat.

2. Provide a brief summary of the basis for the criterion selected in Appendix E (e.g., communication with U.S. Fish and Wildlife Service or National Marine Fisheries Service to determine no species in action area; implementation of controls approved by EPA and the Services):

Direct consultation with the U.S. Fish and Wildlife Service and corresponding development and implementation of a facility-specific Habitat Management Plan.

3. If you select criterion B, provide the NPDES ID from the other operator's NOI authorized under this permit:

--	--	--	--	--	--	--	--	--	--

4. If you select criterion C, you must answer the following questions:

a. What federally-listed species or designated critical habitat are located in your "action area":

---

b. Using the Appendix E worksheet, check which of the following is applicable to your facility and answer any corresponding questions:

☐ I submitted my completed *Criterion C Eligibility Form* to EPA at least 30 days prior to submitting this NOI and agree to implement any additional measures that were determined by EPA to be necessary to ensure that my discharges and/or discharge-related activities will not have likely adverse effects on listed species and critical habitat.

Date your *Criterion C Eligibility Form* was sent to EPA: 

--	--	--	--	--	--	--	--	--	--

Describe any EPA-approved measures you will implement to ensure no likely adverse effects on listed species and critical habitat:

---

☐ I submitted my completed *Criterion C Eligibility Form* to EPA at least 30 days prior to submitting this NOI and have not been notified of any additional measures necessary to ensure no likely adverse effects on listed species and critical habitat.

Date your *Criterion C Eligibility Form* was sent to EPA: 

--	--	--	--	--	--	--	--	--	--

5. If you select criterion D or E, you must attach copies of any letters or other communications with the U.S. Fish and Wildlife Service or National Marine Fisheries Service.

#### H. Historic Preservation

1. If your facility is not located on Indian country lands, is your facility located on a property of religious or cultural significance to an Indian tribe?

☒ YES ☐ NO

If yes, provide the name of the Indian tribe associated with the property: San Ildefonso Pueblo

2. Using the instructions in Appendix F of the MSGP, under which historic properties preservation criterion listed in Part 1.1.4.6 are you eligible for coverage under this permit (only check 1 box)?

☐ A ☒ B ☐ C ☐ D

#### I. Certification Information

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

First Name, Middle Initial, Last Name: J o h n P M c C a n n

Instructions for Completing EPA Form 3510-6

**Notice of Intent (NOI) for Stormwater Discharges  
Associated with Industrial Activity Under the NPDES Multi-Sector General Permit**

NPDES Form Date (06/15)

This Form Replaces Form 3510-6 (09/08)

Form Approved OMB No. 2040-0004

**Who Must File an NOI Form**

Under section 402(p) of the Clean Water Act (CWA) and regulations at 40 CFR Part 122, stormwater discharges associated with industrial activity are prohibited to waters of the United States unless authorized under a National Pollutant Discharge Elimination System (NPDES) permit. You can obtain coverage under the MSGP by submitting a completed Notice of Intent (NOI) if you are an operator a facility:

- that is located in a jurisdiction where EPA is the permitting authority, listed in Appendix C of the MSGP,
- that discharges stormwater associated with industrial activities, identified in Appendix D of the MSGP,
- that meets the eligibility requirements in Part 1.1 of the permit,
- that has developed a stormwater pollution prevention plan (SWPPP) in accordance with Part 5 of the MSGP; and
- that installs and implements control measures in accordance with Part 2 and Part 8 to meet numeric and non-numeric effluent limits.

**Completing the Form**

Obtain and read a copy of the 2015 MSGP, viewable at <http://water.epa.gov/polwaste/npdes/stormwater/EPA-Multi-Sector-General-Permit-MSGP.cfm>. To complete this form, type or print, using uppercase letters, in the appropriate areas only. Please place each character between the marks. Abbreviate if necessary to stay within the number of characters allowed for each item. Use only one space for breaks between words, but not for punctuation marks unless they are needed to clarify your response. **Please submit original document with signature in ink - do not send a photocopied signature.**

**Section A. Approval to Use Paper NOI Form**

You must indicate whether you have been granted a waiver from electronic reporting from the EPA Regional Office. Note that you are not authorized to use this paper NOI form unless the EPA Regional Office has approved its use. Where you have obtained approval to use this form, indicate the waiver that you have been granted, the name of the EPA staff person who granted the waiver, and the date that approval was provided.

See <http://water.epa.gov/polwaste/npdes/stormwater/Stormwater-Contacts.cfm> for a list of EPA Regional Office contacts.

**Section B. Permit Information**

Provide the master permit number of the permit under which you are applying for coverage (see Appendix C of the general permit for the list of eligible master permit numbers).

You must indicate whether you are a new discharger or a new source (see Appendix A for the definitions). If you are not a new discharger or a new source, you must indicate whether stormwater discharges from your facility have been previously covered under another NPDES permit. If yes, you must provide the unique NPDES ID (i.e., permit tracking number) for the previous permit your facility was covered under.

**Section C. Facility Operator Information**

Provide the legal name of the person, firm, public organization, or any other entity that operates the facility described in this NOI. An operator of a facility is the legal entity that controls the operation of the facility. Refer to Appendix A of the permit for the definition of "operator". Provide the operator's mailing address, phone number,

and e-mail. Correspondence for the NOI will be sent to this address. Also provide the name and title for the operator point of contact (note that the point of contact name may be the same as the operator name).

If the NOI was prepared by someone other than the certifier (for example, if the NOI was prepared by the facility SWPPP contact or a consultant for the certifier's signature), include the full name, organization, phone number, and email address of the NOI preparer.

**Section D. Facility Information**

Enter the official or legal name and complete address, including city, state, ZIP code, and county or similar government subdivision of the facility. If the facility lacks a street address, indicate the general location of the facility (e.g., Intersection of State Highways 61 and 34). Complete facility information must be provided for permit coverage to be granted.

Provide the latitude and longitude of your facility in decimal degrees format. The latitude and longitude of your facility can be determined in several different ways, including through the use of global positioning system (GPS) receivers, U.S. Geological Survey (U.S.G.S.) topographic or quadrangle maps. Refer to <http://transition.fcc.gov/mb/audio/bickel/DDDMSS-decimal.html> for assistance in providing the proper latitude/longitude format. For consistency, EPA requests that measurements be taken from the approximate center of the facility. Specify which method you used to determine latitude and longitude. If a U.S.G.S. topographic map is used, specify the scale of the map used. Enter the horizontal reference datum for your latitude and longitude. The horizontal reference datum used on USGS topographic maps is shown on the bottom left corner of USGS topographic maps; it is also available for GPS receivers.

Indicate whether the facility is on Indian country lands, and if so, provide the name of the Indian tribe associated with the area of Indian country (including name of Indian reservation, if applicable).

Indicate whether you are seeking coverage under this permit as a "federal operator" as defined in Appendix A. Also check the ownership type for the facility (e.g., Federal Facility, Privately Owned Facility, Municipality, County Government, Corporation, State Government, Tribal Government, School District, District, Mixed Ownership [e.g., public/private], Municipal or Water District).

Enter the estimated area of industrial activity at your facility exposed to stormwater to the nearest quarter acre.

List the four-digit Standard Industrial Classification (SIC) code or two character activity code that best describes the primary industrial activities performed by your facility under which you are required to obtain permit coverage. Your primary industrial activity includes any activities performed on-site which are (1) identified by the facility's primary SIC code and included in the descriptions of 40 CFR 122.26(b)(14)(ii), (iii), (vi), or (vii); or (2) included in the narrative descriptions of 40 CFR 122.26(b)(14)(i), (iv), (v), (vii), or (ix). See Appendix D of the MSGP for a complete list of SIC codes and activities codes covered under the MSGP. Also provide the applicable sector and subsector associated with the SIC code or activity code for your primary industrial activities. For a complete list of sector and subsector codes, see Appendix D of the MSGP.

If your facility has co-located industrial activities that are not identified as your primary industrial activity, identify the sector and subsector codes that describe these other industrial activities.

**Notice of Intent (NOI) for Stormwater Discharges  
Associated with Industrial Activity Under the NPDES Multi-Sector General Permit**

NPDES Form Date (06/15) This Form Replaces Form 3510-6 (09/08)

Form Approved OMB No. 2040-0004

For Sector S facilities (Air Transportation), indicate whether you anticipate that the entire airport facility will use more than 100,000 gallons of pure glycol in glycol-based deicing fluids and/or 100 tons or more of urea on an average annual basis. If so, additional effluent limits and monitoring conditions apply to your discharge (see Part 8.S of the permit).

For Sector G facilities (Metal Mining), check the type of ore(s) mined at the facility.

Indicate whether your facility is currently inactive and unstaffed. Note that if your facility becomes inactive and unstaffed during the permit term, you must submit an NOI modification to reflect the change.

**Section E. Discharge Information**

You must confirm that you understand that the MSGP only authorizes the allowable stormwater discharges listed in Part 1.1.2 and the allowable non-stormwater discharges listed in Part 1.1.3. Any discharges not expressly authorized under the MSGP are not covered by the MSGP or the permit shield provision of the CWA Section 402(k) and they cannot become authorized or shielded by disclosure to EPA, state, or local authorities via the NOI to be covered by the permit or by any other means (e.g., in the SWPPP or during an inspection). If any discharges requiring NPDES permit coverage other than the allowable stormwater and non-stormwater discharges listed in Parts 1.1.2 and 1.1.3 will be discharged, they must either be eliminated or covered under another NPDES permit.

Depending on your industrial activities, your facility may be subject to federal effluent limitation guidelines which include additional effluent limits and monitoring requirements for your facility. Please review these requirements, described in Part 2.1.3 of the MSGP, and check any appropriate boxes on the NOI form.

You must identify all the outfalls from your facility that discharge stormwater. Each outfall must be assigned a unique 3-digit ID (e.g., 001, 002, 003). You must also provide the latitude and longitude for each outfall from your facility. Indicate whether any outfalls are substantially identical to an outfall already listed, and identify the outfall it is identical to. For each unique outfall you list, you must specify the name of the first water of the U.S. that receives stormwater directly from the outfall and/or from the MS4 that the outfall discharges to. You must specify whether any receiving waters that you discharge to are listed as "impaired" as defined in Appendix A, and the pollutants for which the water is impaired. You must also check identify any Total Maximum Daily Loads (TMDL) that have been completed for any of the waters of the U.S. that you discharge to. You must also provide information about the outfall latitude/longitude, including data source, the scale (if applicable), and the horizontal reference datum. See the instructions in Section D for more information about determining the latitude and longitude.

Identify whether your facility discharges into a Municipal Separate Storm Sewer System (MS4). If yes, provide the name of the MS4 operator. If you are uncertain of the MS4 operator, contact your local government for that information.

Indicate whether discharges from the facility will enter into a water of the U.S. that is designated as a Tier 2, Tier 2.5, or Tier 3 water. A list of Tier 2, 2.5, and 3 waters is provided as Appendix L. If the answer is "yes", name all waters designated as Tier 2, Tier 2.5, or Tier 3 to which the facility will discharge. Note that you are ineligible for coverage if you are a new discharger or a new source to waters designated as Tier 3 (outstanding national resource waters) for antidegradation purposes under 40 CFR 131.13(a)(3).

If you are subject to any benchmark monitoring requirements for metals (see the requirements applicable to your Sector(s) in Part 8 of the permit), indicate the hardness for your receiving water(s). See Appendix J of the permit for information about determining waterbody hardness.

If you are subject to benchmark monitoring requirements for hardness-dependent metals you must also answer whether your facility discharges into any saltwater receiving waters.

Indicate whether your facility will discharge to a federal CERCLA site listed in Appendix P. Note that if your facility will discharge into a federal CERCLA site listed in Appendix P, you are not eligible for coverage under this permit unless you notify the EPA Regional Office in advance and the EPA Regional Office authorizes coverage under this permit after you have included adequate controls and/or procedures designed to ensure that discharges will not lead to recontamination of aquatic media at the CERCLA site such that your discharge will cause or contribute to an exceedance of a water quality standard.

**Section F. Stormwater Pollution Prevention Plan (SWPPP) Information**

All facilities eligible for coverage under this permit are required to prepare a SWPPP in advance of filing the NOI, in accordance with Part 5. Indicate whether the SWPPP has been prepared in advance of filing the NOI.

Indicate the contact information (name, phone, and email) for the person who developed the SWPPP for this facility.

You identify how your SWPPP information will be made available consistent with Part 5.4 and 7.3 of the permit. If you are making your SWPPP publicly available on a web site, check Option 1 and provide the appropriate Internet URL address. If you are not providing a URL, check Option 2 and provide the selected SWPPP information on this NOI form. You may copy and paste this information directly from your SWPPP.

**Section G. Endangered Species Protection**

Using the instructions in Appendix E, indicate the Part 1.1.4.5 criterion (i.e., A, B, C, D, or E) you are eligible under with regard to the protection of federally listed endangered and threatened species and designated critical habitat. A description of the basis for the criterion selected must also be provided.

If criterion B is selected, provide the NPDES ID (i.e., permit tracking number) for the other operator who has certified their eligibility under this permit. The NPDES ID was assigned when the operator received coverage under this permit.

If criterion C is selected, you must specify the federally-listed species or designated critical habitat that are located in the "action area" of the facility. You must also indicate under which scenario you determined you were eligible to submit your NOI under criterion C using Appendix E, and answer any corresponding questions.

If criterion D or E is selected, attach copies of any communications between you and the U.S. Fish and Wildlife Service and National Marine Fisheries Service to this NOI.

**Section H. Historic Preservation**

If the project is not located in Indian country lands, indicate whether the project is located on a property of religious or cultural significance to an Indian tribe, and if so, provide the name of the Indian tribe associated with the property. Use the instructions in Appendix F to complete questions on the NOI form regarding historic preservation.

Instructions for Completing EPA Form 3510-6

**Notice of Intent (NOI) for Stormwater Discharges  
Associated with Industrial Activity Under the NPDES Multi-Sector General Permit**

NPDES Form Date (06/15) This Form Replaces Form 3510-6 (09/08)

Form Approved OMB No. 2040-0004

**Section I. Certification**

Certification statement and signature (see Section 8.11 of Appendix B of the MSGP for more information). Enter certifier's printed name, title and email address. Sign and date the form. (CAUTION: An unsigned or undated NOI form will prevent the granting of permit coverage.) Federal statutes provide for severe penalties for submitting false information on this application form. Federal regulations require this application to be signed as follows:

*For a corporation:* by a responsible corporate officer, which means: (i) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation, or (ii) the manager of one or more manufacturing, production, or operating facilities, provided, the manager is authorized to make management decisions which govern the operation of the regulated facility including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long-term environmental compliance with environmental laws and regulations; the manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for permit application requirements; and where authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

*For a partnership or sole proprietorship:* By a general partner or the proprietor, respectively; or

*For a municipality, state, federal, or other public agency:* By either a principal executive officer or ranking elected official. For purposes of this Part, a principal executive officer of a federal agency includes (i) the chief executive officer of the agency, or (ii) a senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrator of EPA). Include the name and title of the person signing the form and the date of signing.

An unsigned or undated NOI form will not be considered eligible for permit coverage.

**Modifying Your NOI**

If you have been granted a waiver from your Regional Office from electronic reporting, and if after submitting your NOI you need to correct or update any fields on this NOI form, you may do so by indicating changes on this same form.

**Paperwork Reduction Act Notice**

Public reporting burden for this NOI is estimated to average 3.7 hours plus an additional 2 hours for certain respondents required to gather hardness data. This estimate includes time for reviewing instructions searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Send comments regarding the burden estimate, any other aspect of the collection of information, or suggestions for improving this form, including any suggestions which may increase or reduce this burden to: Director, Collection Strategies Division, U.S. Environmental Protection Agency (2822T), 1200 Pennsylvania Ave., NW, Washington, D.C. 20460. Include the OMB control number on any correspondence. Do not send the completed form to this address.

**Submitting Your Form**

If you have been granted a waiver from your Regional Office to submit a paper NOI form, you must send your NOI by mail to one of the following addresses:

**For Regular U.S. Mail Delivery:**

Stormwater Notice Processing Center  
Mail Code 4203M, ATTN: 2015 MSGP Reports  
U.S. EPA  
1200 Pennsylvania Avenue, NW  
Washington, DC 20460

**For Overnight/Express Mail Delivery:**

Stormwater Notice Processing Center  
William Jefferson Clinton East Building - Room 7420  
ATTN: 2015 MSGP Reports  
U.S. EPA  
1201 Constitution Avenue, NW  
Washington, DC 20004

Visit this website for instructions on how to submit electronically:

David A. Gurule, Acting Area Manager  
Department of Energy  
Albuquerque Operations Office  
Los Alamos Area Office  
Los Alamos, New Mexico 87545

Dear Mr. Gurule:

This responds to your letter dated August 6, 1998, requesting our review and concurrence with the Threatened and Endangered Species Habitat Management Plan (HMP) for Los Alamos National Laboratory (LANL). The HMP was prepared by the LANL Ecology Group for the Department of Energy (DOE) as part of the Dual-Axis Radiographic Hydrodynamics Test Facility (DAHRT) Mitigation Action Plan. The U.S. Fish and Wildlife Service (Service) has worked closely with LANL in the development of the HMP. As a result of discussions and meetings following the August 6, 1998, submittal, additional information/clarification was provided via letters, updated Biological Evaluations/HMPs, and e-mail messages, dated September 8, October 20, November 25, and December 9, 1998, and January 4, January 22, and January 29, 1999. The purpose of the HMP is to provide for the protection of threatened and endangered species and their habitats on LANL. The HMP consists of three components that must be used together to assure proper management of the threatened and endangered species: an Overview Document, Site Plans, and Monitoring Plans. It was determined that if all the restrictions and protective measures outlined in the HMP are strictly followed, the implementation of this HMP may affect, but is not likely to adversely affect the Mexican spotted owl (owl), peregrine falcon (falcon), bald eagle (eagle), and southwestern willow flycatcher (flycatcher). The Biological Evaluation (BE) also considered potential impacts on the black-footed ferret, arctic peregrine falcon, and whooping crane. It was determined that there would be no effect on these species because of a lack of habitat.

Property at LANL varies from remote isolation to heavily developed and/or industrialized. The Service agrees, as stated in the Overview document, that a number of activities at LANL have the potential to adversely impact threatened and endangered species. Many of the industrial processes used at LANL have involved hazardous and radioactive materials. These materials as well as remediation of potential release sites may disturb

or reduce population viability of threatened and endangered species. In addition, other potential sources of disturbance or habitat alterations are possible as a result of the residential and commercial development in the LANL area. While the HMP identifies potential sources of adverse effects, this consultation does not necessarily cover all of those impacts. The Service does not anticipate that DOE will be able to plan all of its operations at LANL in accordance with this plan. The direct effects of most actions can be minimized through implementation of the HMP; however, a more thorough assessment is necessary to adequately evaluate the indirect and cumulative impacts of all actions that are funded, authorized, and permitted by DOE, as well as potential impacts from interrelated and interdependent actions. It was agreed (by Service, DOE, and LANL personnel) that consultation concerning ongoing LANL operations would be handled separately from the HMP, under the consultation on the Site-Wide EIS.

The Site Plans identify the particular areas of LANL where operations might impact known occupied or potential habitat for the flycatcher, eagle, falcon, and owl. Suitable habitat for these species, along with protective buffer areas surrounding their habitat, have been designated as Areas of Environmental Interest (AEIs). For the flycatcher, one AEI was established based on an observation of a migrant male flycatcher in 1997. The AEI is located in the Pajarito wetland area and includes the best available riparian habitat. For eagles, one AEI has been identified for wintering habitat that exists along the Rio Grande on the eastern edge of LANL. It is based on the locations of known and potential roost sites. For the falcon, four AEIs have been identified. They consist of the habitat previously identified under the 1985 interagency agreement. These areas are centered on deep canyons on the eastern side of LANL or on adjacent lands. LANL has agreed to implement the recommended management guidelines, which utilize four management zones (A through D) to protect nesting peregrine falcons from disturbance. For the owl, six AEIs have been identified, but only one of these sites is known to be occupied. These AEIs are based on and located in canyons that have been defined as suitable nest/roost habitat.

The AEI management section of each Site Plan provides guidelines for LANL operations to reduce or eliminate threats to each species. The primary threats on LANL property are (1) impacts on habitat quality from LANL operations and (2) disturbance of nesting or roosting birds. The site plans provide information on their location and guidelines for their management. The AEI Site Plans consist of a species description, descriptions of the AEIs for the species, descriptions of current impacts in the AEIs, management plans that describe allowable activities within core and buffer areas under the guidelines of the sites plan and protective measures. Activities discussed in the site plans include day to day activities, such as access into an AEI, as well as long-term projects, such as levels of habitat alteration in the buffer area of an AEI. Restrictions will be implemented on activities that could cause disturbance (people, vehicles and machinery, aircraft, light production, and noise) within occupied AEIs. The location of a potential disturbance activity within the AEI, the occupancy status of the AEI, and the type of activity all affect whether or not an activity is allowable. Habitat alterations are always restricted in core areas, but a limited amount of future development is allowed in currently undeveloped DOE-controlled buffer areas under the guidelines of this site plan as long

as it does not alter habitat in the undeveloped AEI (including light and noise guidelines). The purpose of buffer areas is to protect core areas from undue disturbance or habitat alteration or habitat degradation. Each AEI is specific to the situation or circumstances of the site it covers. According to the HMP, development beyond the cap established for each AEI, or greater than 2 hectares in size, including the developed-area border, requires independent review for ESA compliance.

Varying amounts of development and/or ongoing activities exist in the cores and buffers of each AEI. These developments may include residential, commercial, and light industrial areas, as well as roads and utility corridors. Existing/ongoing activities may include periodic scientific surveys, power line maintenance, recreational use, residential development, ER Program activities, and possible use of a firing site. Potential disturbance may be associated with automobile and truck traffic, construction activities, a live-fire range, explosives testing, and aircraft traffic at the County airport. Ongoing activities in developed areas constitute a baseline condition for the AEIs and are not restricted. New activities including further development within already existing developed areas are not restricted unless they impact undeveloped portions of an AEI core. If a proposed action within a developed area does not meet site plan guidelines, it must be individually reviewed for ESA compliance.

Some activities such as utility corridor maintenance, fuels management, and a limited amount of development are allowed in each AEI (as described in the HMP). The potential impacts of these activities are considered to be insignificant or discountable because they will occur in habitat that has been previously disturbed or is of poor quality due to its size or proximity to already developed areas. It is our understanding (based on the January 22, 1999, e-mail response from Terry Foxx) that the fuels management activities within the owl AEIs will only consist of ongoing and proposed fire protection activities around existing facilities (e.g. thinning around buildings) or those activities that are already covered under the Dome Fire Emergency BA. The other fire management activities mentioned in the HMP will go through the ESH-ID process and further consultation with the Service when a fire management plan is completed in the future.

In general, activities that detrimentally alter habitat in an AEI or would cause unacceptable disturbance to the species inhabiting the AEI are not allowed under the guidelines of a Site Plan. The Site Plans are designed to minimize impacts to threatened and endangered species and their habitat. The protective measures and restrictions outlined in the Site Plans were developed using the best available data, in cooperation with Service biologists.

The U.S. Fish and Wildlife Service concurs with DOE's determination that implementation of LANL's HMP may affect, but is not likely to adversely affect the Mexican spotted owl, American peregrine falcon, bald eagle, and southwestern willow flycatcher based on the protective measures described in the BA and HMP. If all the restrictions and protective measures outlined in the HMP are strictly followed, potential impacts on owls, falcons, eagles, and flycatchers are expected to be insignificant or

David A. Gurule, Acting Area Manager

4

discountable for the following reasons: 1) appropriate seasonal restrictions will be implemented to avoid disturbance to potentially breeding flycatchers, peregrines, and owls and wintering eagles; 2) no nest or roost habitat for any listed species will be altered; 3) the total amount of potential foraging habitat that could be impacted within each species home ranges is expected to be insignificant compared to the amount of available foraging habitat throughout the area; 4) monitoring plans have been developed as an integral part of the HMP; and 5) a mechanism for incorporating necessary technical and regulatory changes and updating the HMP has been included (page 32 of the Overview Document).

In future communications regarding this project, please refer to Consultation #2-22-98-I-336. If we can be of further assistance, please contact Carol Torrez of my staff at (505) 346-2525, ext. 115.

Sincerely,

Jennifer Fowler-Propst

Geoffrey L. Beausoleil, Acting Manager  
National Nuclear Security Administration, Los Alamos Field Office  
Department of Energy  
Los Alamos, New Mexico 87544

Dear Mr. Beausoleil:

Thank you for your biological assessment entitled, "Biological Assessment of the Effects of Implementing the Jemez Mountains Salamander Site Plan on Federally Listed Threatened and Endangered Species at Los Alamos National Laboratory" (BA); the request for informal consultation and conferencing received on July 25, 2013 and supplemental information supplied in the "Jemez Mountains Salamander (*Plethodon neomexicanus*) Los Alamos National Laboratory (LANL) Site Plan" (Site Plan); and emails dated November 19 and December 3, 2013. The Department of Energy (DOE) requested concurrence with the determination of effects for the endangered Jemez Mountains salamander (*Plethodon neomexicanus*) (salamander) pursuant to Section 7(a)(2) of the Endangered Species Act of 1973 (ESA), as amended (16 U.S.C. § 1531 *et seq.*). Your proposed action consists of implementing the Site Plan, and includes of the incorporation of this Site Plan into LANL's Habitat Management Plan (HMP). The HMP was consulted upon in 1999 (Consultation #2-22-981-336) as the primary mechanism to ensure compliance with the ESA at LANL. The actions described in the Site Plan and analyzed in the BA, and supplemental emails are hereby incorporated by reference. You determined that implementing the Site Plan "may affect, is not likely to adversely affect" the salamander, and includes placing restrictions on certain types of work in areas identified as core habitat for the salamander on LANL property with the purpose of ensuring that effects to the salamander from those actions identified in the Site Plan are insignificant and discountable.

The Site Plan does not include any areas within designated salamander critical habitat, indicating that no critical habitat will be affected. The Site Plan has modeled and field validated the model to identify the areas on LANL property with the highest potential to be occupied by salamanders based on habitat features for the salamander. Each area identified by the modeling is termed "Area of Environmental Interest" (AEI) and consists of a "core area" and a "buffer area". The core area habitat is defined as suitable habitat where the salamander occurs or may occur at LANL. The core area habitat consists of sections of north-facing slope that contain the required

micro-habitat to support salamanders. The buffer area is 328 feet (100 meters) wide extending outward from the edge of the core area. Only the Los Alamos Canyon AEI is known to be occupied based on surveys. Surveys for the salamander are known to have a very low detection rate for occupied areas and DOE has assumed that all AEIs at LANL are occupied at all times by the salamander.

Within the Site Plan, DOE has assessed activities that could cause habitat alteration and includes any action that alters the soil structure, vegetative components necessary to the species, water quality, or hydrology in undeveloped areas of an AEI. If an activity were to take place outside of the AEI the activity will be assessed if it will have effects inside the AEI core. Within the core areas, only activities specified within the Site Plan and those that have no effect in the core areas (e.g. no habitat alterations or effects within the core areas) will be conducted without further consultation with the Service. Habitat alterations also include soil pits for soil samples deeper than 6 inches (15.2 centimeters) using either hand or mechanized augers. Within the Site Plan, DOE is proposing fuels management practices to reduce wildfire risk and maintenance of utility corridors within the AEIs. The likelihood that salamanders may be affected by the actions in the Site Plan is very low. To ensure that effects to the salamander are insignificant and discountable, the Site Plan incorporates the following conservation measures as restrictions to the identified work:

#### **Fuels Management Practices to Reduce Wildfire Risk**

- a. Within undeveloped core areas, thinning trees to a level of 80% canopy cover or higher may occur; tree thinning below 80% canopy cover is not part of the action under this consultation.
- b. Large logs on the ground will be left in place and not chipped.
- c. Large trees that are felled will be left as large logs on the ground
- d. When appropriate, smaller trees and understory shrubs that may be thinned will be dispersed and left on-site to aid in soil moisture retention.
- e. In buffer areas, thinning of trees may occur to the current LANL-approved prescription level; clear-cutting will not occur.
- f. Thinning activities will not occur during the rainy season when salamanders are surface active, between July 1 – October 31. Thinning activities may occur earlier in October if freezing temperatures are present.
- g. In the unlikely event that a salamander is observed surface active during thinning activities, all activities shall cease, and the Service will be notified.

#### **Utility Corridors**

- a. Cutting trees that threaten power lines may occur within 26 feet (8 meters) of either side of an existing utility line at LANL
- b. New utility lines and utility lines requiring clearance of a right-of-way greater than 52 feet (16 meters) total in core habitat is not part of the action under this consultation.

Habitat alterations other than the fuels management practices and utility corridor maintenance described above will not occur in undeveloped core areas under the guidelines of the Site Plan or this consultation. The Service concurs with DOE's determination regarding the salamander for the following reasons:

Within the Site Plan, DOE has placed the above detailed restrictions to ensure that any effects to the salamander and its habitat remain insignificant and discountable. Canopy cover will remain at 80% or greater in undeveloped core areas and fire management actions will occur outside of the salamander surface activity period. Maintaining utility line corridors in areas with existing infrastructure (the utility lines) by removing individual hazard trees is not expected to have any measurable effect on salamanders or their potential habitat. Consequently, we concur that potential effects to the salamander from the proposed action will be insignificant and discountable.

This concludes section 7 consultation regarding the proposed action. If monitoring or other information results in modification or the inability to complete all aspects of the proposed action, consultation should be reinitiated. Please contact the Service if: 1) future surveys detect listed, proposed or candidate species in habitats where they have not been previously observed; 2) the proposed action changes or new information reveals effects of the proposal to listed species that have not been considered in this analysis; or 3) a new species is listed or critical habitat designated that may be affected by the action.

Thank you for your concern for endangered and threatened species and New Mexico's wildlife habitats. In future correspondence regarding this project, please refer to consultation #02ENNM00-2014-I-0014. If you have any questions, please contact Michelle Christman of my staff at (505) 761-4715.

Sincerely,

  
Wally Murphy  
Field Supervisor

Kimberly Davis Lebak, Manager  
Department of Energy  
National Nuclear Security Administration  
Los Alamos Field Office  
Los Alamos, New Mexico 87544

Dear Ms. Lebak:

This responds to your July 9, 2015, cover letter and biological assessment (BA) requesting informal consultation for the addition of the Western distinct population segment of the yellow-billed cuckoo (*Coccyzus americanus occidentalis*) (cuckoo) and the New Mexico meadow jumping mouse (*Zapus hudsonius luteus*) (jumping mouse) to the Los Alamos National Laboratory Habitat Management Plan, Los Alamos, New Mexico. As documented in your BA, which is hereby incorporated by reference, we find that your proposed action will have insignificant and discountable effects to the cuckoo and the jumping mouse. Therefore, the Service concurs with your determination of "may affect, is not likely to adversely affect" for the cuckoo and the jumping mouse.

This concludes section 7 consultation regarding the proposed action. If monitoring or other information results in modification or the inability to complete all aspects of the proposed action, consultation should be reinitiated. Please contact the Service if: 1) future surveys detect listed, proposed or candidate species in habitats where they have not been previously observed; 2) the proposed action changes or new information reveals effects of the proposal to listed species that have not been considered in this analysis; or 3) a new species is listed or critical habitat designated that may be affected by the action.

Kimberly Davis Lebak, Manager

2

Mr. Brent Larsen  
Water Quality Protection Division (6WQ)  
U.S. Environmental Protection Agency, Region 6  
1445 Ross Avenue, Suite 1200  
Dallas, TX 75202-2733

Dear Mr. Larsen:

**Subject: National Pollutant Discharge Elimination System (NPDES) Permit Tracking No. NMR053195, Multi-Sector General Permit (MSGP) Notice of Intent (NOI) Reporting Pursuant to Part B.12.H.**

In submitting a NOI for coverage under the new NPDES Multi-Sector General Permit, Los Alamos National Security (LANS) experienced significant problems with EPA's NeT NPDES eReporting Tool which resulted in certification of the NOI on September 3 and initial submission of a NOI with incomplete outfall attribute data and incorrect information. During this time LANS staff contacted EPA's NOI Processing Center for support and was given the recommendation to contact Region 6 personnel for further guidance. Per this direction, on September 1, 2015, Terrill Lemke left you a voicemail summarizing the issues and potential impacts of the difficulties experienced with the new electronic reporting system. For additional clarification, the following is a summary of the timeline of events associated with the NOI submission.

- Monday, August 31, 2015
  - Initiated NOI submission using the NeT NPDES eReporting Tool.

Mr. Brent Larsen  
ENV-DO-15-0309

- 2 -

- As data was entered into each data field on the NOI form, the Tool was very slow in processing the data and allowing entry into the next field. This created a significant waiting time.
- Upon reaching the fields on the NOI form where outfall attribute data was entered the Tool began to randomly crash, repeatedly deleting all unsaved data.
- Tuesday, September 1, 2015
  - Tool continued to be very slow and randomly crash, repeatedly deleting all unsaved data.
  - For each outfall, when listing the constituents associated with impaired waters, the Tool's auto population feature initially displayed incorrect data which required additional editing and then eventually stopped functioning and caused the Tool to crash.
  - Much of the outfall attribute data had to be reentered multiple times before it was possible to successfully save it to the system.
  - After each save or Tool crash the eReporting Tool would close the NOI form. The time required for the Tool to repeatedly reopen the form made data entry very time consuming.
  - LANS staff contacted the EPA NOI Processing Center on the afternoon of Sept 1 for technical support:
    - NOI Processing Center staff stated that they had been "flooded" with calls over the past week on Tool problems.
    - LANS staff expressed their concern about the length of time being required to enter data and the potential inability to complete the NOI form by the Sept 2 deadline. No solution was available.
    - LANS staff explained the difficulty with entering outfall information for 73 outfalls and NOI Processing Center staff stated that they had received numerous calls on problems with entering outfall data and that some permittees couldn't even enter 20 outfalls.
    - NOI Processing Center staff recommended contacting Regional personnel to notify them of the situation and to seek additional guidance.
  - The eReporting Tool went down at approximately 3:30 pm MDT and remained down until after 9 pm MDT. This eliminated the opportunity to input data during normal business hours.
- Wednesday, September 2, 2015
  - Continued decrease in the performance of the eReporting Tool.
    - Increase in the time for the Tool to process information after entry of each item of data.
    - Increased frequency in the Tool crashing.
    - For each outfall, when listing the constituents associated with impaired waters, the form had to be saved after entry of each individual constituent. Entry of more than one constituent without saving would cause the Tool to crash.

Mr. Brent Larsen  
ENV-DO-15-0309

- 3 -

- With the decreased performance of the eReporting Tool LANS staff contacted the EPA NOI Processing Center for direction and Processing Center staff stated the following:
  - They were aware of the problems with the Tool but could provide no solutions or technical direction.
  - They had been reporting daily to EPA on the problems and EPA was definitely aware of the issues.
  - When asked about taking the Tool down at 3:30 MDT on Sept. 1, staff stated that they thought the programmers may have taken the system down to assess the problems.
  - Stated again that they had received many calls about technical issues with the Tool.
  - The more data that was entered the slower the Tool would get.
  - When asked again about the possibility that LANS may not be able to get all information into the NOI, staff stated that LANS would be able to access the submitted NOI to modify/add data after the 30 day waiting period.
- eReporting Tool went down again at 3:30 pm MDT and did not come back up until after 10 pm MDT, again eliminating the opportunity to input data during normal business hours.
- The LANS NOI with all information except some remaining outfall attribute data was submitted by the Preparer at 10:50 pm MDT.
  - The LANS NOI certification signatory was prepared to certify the NOI at this time but didn't get notification that the NOI was ready for certification until 9:37 am MDT on Sept. 3, almost 11 hours later.
  - The NOI was certified on Sept 3, 2015.

Additionally, the NeT NPDES eReporting Tool did not provide dissolved Thallium as a constituent option, but only allowed the selection of total Thallium as an impaired water pollutant under a "Cause Group" when "Metals (other than Mercury)" was selected from the drop down menu. This resulted in LANS having to enter total Thallium as an impaired water pollutant in error for the following outfalls: 002, 005, 006, 007, 008, 009, 010, 011, 012, 016, 017, 018, 019, and 020. LANS appreciates any assistance you may have relative to the total Thallium vs. dissolved Thallium issue. During a subsequent quality assurance evaluation, LANS staff also determined that total Copper was erroneously entered as an impaired water pollutant for outfall 051 and needs to be deleted from the NOI.

LANS is committed to maintaining compliance with the MSGP requirements. Per Section B.12.H of the MSGP, the LANS NOI will be modified to include the remaining outfall attribute data that could not be included on the initial submission and to delete Copper as an impaired water pollutant for outfall 051. LANS coverage under the 2015 MSGP became effective on October 3, 2015, and with the NOI now accessible, actions to update the NOI have been initiated.

Mr. Brent Larsen

**Subject: June 2016 Internal Distribution of the LANL Hazardous Waste Facility Permit – Revised Contingency Plan (Attachment D)**

Enclosure 1 of this electronic distribution is the most recent LANL Hazardous Waste Facility Permit Contingency Plan. It is dated June 2016 and should replace the plan dated January 2016. Please print the plan located as Enclosure 1 and ensure that a copy of the enclosed document (excluding this memo and the enclosure coversheet) is located at each of the permitted and interim status units.

For interim status units, please ensure that a copy of the most recent emergency equipment list and evacuation route is also available at each of the interim status units.

This memo and its enclosure serve as a record of internal distribution of the Contingency Plan in accordance with Section 2.11.3 of the LANL Hazardous Waste Facility Permit. The most recent Contingency Plan is available from the Hazardous Waste Facility Permit Tracking webpage at: [http://int.lanl.gov/environment/waste/permit\\_tracking.shtml](http://int.lanl.gov/environment/waste/permit_tracking.shtml). Additionally, the hardcopy controlled versions will also be updated by EPC-CP.

D-1	General Hazardous and Mixed Waste Emergency Notification Structure
-----	--

## **ATTACHMENT D**

### **GENERAL CONTINGENCY PLAN**

This Attachment presents contingency measures applicable to all permitted hazardous or mixed waste management units. The Permittees shall implement the provisions of this Plan and the applicable provisions of Permit Part 2 (*General Facility Conditions*) immediately to minimize hazards whenever there is a fire, explosion, or release of hazardous or mixed waste or hazardous or mixed waste constituents that could threaten human health or the environment.

#### **D.1 HAZARDOUS AND MIXED WASTE EMERGENCY RESPONSE RESOURCES**

1. The management of hazardous and mixed waste emergency incidents at the Facility resides within Permittees' Security and Emergency Operations 3 - Emergency Management Group (SEO-3:EM). During an emergency situation, line management (*i.e.*, the Line Manager of the affected area) works with an Emergency Manager serving as the SEO-3:EM Duty Officer from the SEO-3:-EM Group. The Emergency Manager has primary responsibility for managing emergency response operations, directing the Emergency Operations Support Center (EOSC) to make appropriate notifications, and activating the emergency response organizations. The Emergency Manager has authority to assume the role of Incident Commander (IC) during an emergency and typically assumes full responsibility for management of the emergency response operations at the scene. (Personnel from other organizations, such as the Federal Bureau of Investigation or the Los Alamos Fire Department [LAFD], may also assume the role of IC, depending upon the type of emergency and responding organizations.) Additional Facility resources that may provide assistance in an emergency include personnel from health physics, industrial hygiene, environment compliance, emergency response, and radiation protection personnel at the Facility. These personnel as well as other resources are discussed in Attachment Sections D.1.2, D.1.3, and D.1.6 of this Attachment.
2. Laboratory-contracted support services and other agencies shall also be available for assistance during emergencies. These are discussed in Attachment Section D.1.5 and include the contracted services for security and the LAFD. These contracted services, if changed, shall be replaced and/or supplemented with functionally equivalent contracted services required to assume the same duties and responsibilities described in this section. Other outside response agencies are discussed in Section D.1.7 and include the Los Alamos Police Department (LAPD) and the Los Alamos Medical Center (LAMC). The LAPD and the LAMC each provide assistance under a memorandum of understanding with the U.S. Department of Energy (DOE).
3. The Permittees shall use the Incident Command System (ICS) in response to all emergencies. The ICS is based on the on-scene management response structure protocols of the National Incident Management System (NIMS). The NIMS is a national standard that provides a solid foundation for an effective and integrated emergency response both locally and nationally, if necessary.

4. The IC (*e.g.*, SEO-3:EM Duty Officer) coordinates all groups and agencies responding to the emergency and personnel operating at the scene using the ICS. The General Hazardous Waste Emergency Notification Structure, illustrated on Figure D-1, is designed to expand and contract, as appropriate, to include the response groups/agencies needed to address any particular emergency. The EOSC provides notification to on-site and off-site groups and agencies for both response requests and information.
5. The IC may appoint and utilize a network of support personnel to assess, plan for, and mitigate emergencies. These personnel can include, but are not limited to, a Safety Officer, a Public Information Officer, and a Liaison Officer that report directly to the IC and are responsible for issues related to safety, information, and the interaction of various groups associated with the overall emergency. Also reporting directly to the IC are an Operations Section Chief, Logistics Section Chief, Planning Section Chief, and an Administrative Section Chief. The Operations Section Chief oversees the Fire Branch, the Emergency Medical Services Branch, and the Hazardous Material Group, and is responsible for mitigating the emergency response. The Logistics Section Chief is responsible for providing support personnel and equipment necessary for the emergency response. The Planning Section Chief is responsible for planning the mitigation and recovery activities for the emergency. The Administrative Section Chief is responsible for keeping records of expenditures. These ICS positions are listed in Figure D-1. The appropriate ICS positions will be activated as the emergency warrants. During an emergency at the Facility, assistance may be provided to the IC and the IC's appointees by a large variety of response groups/agencies. The responsibilities and/or assistance available from the various response groups/agencies are discussed briefly in Attachment Sections D.1.2 through D.1.7 and the appropriate representatives will be contacted during an emergency as appropriate.
6. The Permittees shall provide a copy of this Contingency Plan and any revisions to each of the emergency response groups/agencies (including the LAPD, LAFD, LAMC, and the State of New Mexico's Department of Homeland Security and Emergency Management (DHSEM) Area 3 Emergency Management Coordinator).

#### **D.1.1 Emergency Operations-Emergency Management Group**

1. The Permittees shall delegate the authority and responsibility for administering and implementing the Facility's emergency management program to the Security and Emergency Operations (SEO) Division, which includes SEO-3:EM. SEO Division personnel shall coordinate and issue the Facility's Los Alamos National Laboratory and Los Alamos Field Office Hazardous Materials Program Plan; SEO-3:EM provides response coordination for emergencies. SEO-3:EM provides a 24-hour Emergency Operations Support Center (EOSC) for the Facility and an Emergency Manager serving as the 24-hour Duty Officer to respond to emergencies, including hazardous and mixed waste releases. The Facility Emergency Manager (*i.e.*, the SEO-3:EM Duty Officer) is the functional equivalent of the Emergency Coordinator (40 CFR § 264.55). The SEO-3:EM maintains an Emergency Operations Center (EOC) in a ready condition, should a center be required. The primary EOC is located at TA-69, Building 33 (TA-69-33). An alternate mobile EOC is equipped and ready for immediate deployment. Should an

EOC be activated during an emergency, additional emergency personnel can be requested by the IC through the EOC.

2. Assignment as the SEO-3:EM Duty Officer is rotated. The Duty Officer can be reached 24 hours a day by contacting the EOSC at 667-6211.

3. The SEO-3:EM Duty Officer will respond to emergency incidents involving the release of hazardous or mixed waste to the environment, including spills, fires, and explosions. With input from the appropriate Facility groups, the SEO-3:EM Duty Officer shall initially assess the possible hazards to human health or the environment and, if assuming incident command, shall use whatever response personnel and/or emergency equipment necessary to control and contain the waste. In the event of an emergency, the SEO-3:EM Duty Officer typically becomes the IC with full responsibility for field activities. As described previously, the exception to this is when on-site personnel can adequately address the emergency and maintain incident command internally.

4. The SEO-3:EM Duty Officer responding to an emergency shall have access to various tools to include Emergency Actions Levels with prescribed protective actions and ChemLog with a current chemical inventory of the appropriate building(s) in the area in which the incident is occurring. These tools shall be maintained by the EOC with assistance from the facility manager where a waste management unit is located and shall be available at the EOC at TA-69; located on-site for use by emergency response personnel; and available to SEO-3:EM Duty Officers by computer. The various response groups shall obtain specific information relating to the facilities involved (including the layout of all affected buildings; the location of evacuation routes, equipment, and personnel; properties of the materials/wastes managed at the facility; and the hazards associated with these materials/wastes) from other site-specific information.

5. The Permittees shall ensure that the names, addresses, and telephone numbers listed below are the current Primary and Alternate Emergency Managers.

**Primary:**

Brenda Andersen  
3926 A Alabama  
Los Alamos, NM  
(H) 505-662-4173  
(W) 505-667-6211  
(C) 505-699-1144

**Alternates:**

Ron Huerta  
P.O. Box 923  
Alcalde, NM  
(H) 505-852-0286  
(W) 505-667-6211  
(C) 505-412-8434

Peter Salazar  
912 Calle Quintana  
Española, NM  
(H) 505-747-1399  
(W) 505-667-6211  
(C) 505-500-2594

Dave McClard  
23 Ojito Drive  
Española, NM  
(H) 505-412-8945  
(W) 505-667-6211  
(C) 505-699-0803

6. To assure timely notifications and immediate response during an emergency, the Permittees shall ensure that the telephone numbers 911 or 667-6211 are contacted to obtain the on-call SEO-3:EM Duty Officer.

**D.1.2 Hazardous Materials Response**

1. The Hazardous Materials (HAZMAT) Group is responsible for the aggressive mitigation of chemical, radiological, hazardous waste, and mixed waste emergencies, including field decontamination of responders and response equipment. At the request of the IC, the HAZMAT Group may provide limited field decontamination support for victims. The HAZMAT Group is capable of providing a decontamination station at the scene of a hazardous material incident to process people working in a contaminated area and is prepared to perform decontamination of personnel. The HAZMAT Group shall meet the training criteria for emergency response personnel specified in the Code of Federal Regulations, Title 29, §1910.120(q)(6)(iii), (iv), and (v). The HAZMAT Group acts as part of the ICS reporting directly to IC, or the Operations Section Chief if the position is staffed.

2. During an emergency response, the HAZMAT Group may also provide site field monitoring to determine the nature and extent of contamination, provide information on correct handling of chemicals, make recommendations on protective clothing and equipment, and provide exposure and treatment information to responders. The field monitoring team leader supervises field monitoring activities to determine the boundaries of the potential release. The HAZMAT Group

may obtain resources from environmental monitoring groups, such as health physics and industrial hygiene personnel.

### **D.1.3 Environmental Protection and Compliance Division and Waste Management Division Response**

At the scene, representatives and technical advisors from Environmental Protection Division and Compliance (EPC), Waste Management Division (WM), and other response personnel are coordinated by the IC. In addition to their post-emergency duties, they may also be responsible for on-scene emergency operations such as planning. Depending on the type of emergency and the associated hazards, an individual from the most relevant group in the EPC shall provide technical support and shall ensure the Permittees' compliance with applicable federal, state, and local regulations.

#### **D.1.3.1 Ecology Personnel**

Ecology personnel provide field surveys of soil, foodstuffs, and biota to determine environmental effects of exposure after an emergency.

#### **D.1.3.2 Meteorology and Air Quality Personnel**

Meteorology and air quality personnel provide field surveys of air to determine environmental impacts and dose equivalent to members of the public after a radiological emergency. In addition, they provide expertise in meteorology to project short- and long-term environmental effects of emergency conditions.

#### **D.1.3.3 Hazardous Waste Compliance Personnel**

Hazardous waste compliance personnel provide guidance on regulatory requirements for proper treatment, storage, and transportation of hazardous and mixed wastes to other Facility groups. After an emergency, waste management sampling personnel may provide field sampling (e.g., of soil, spills, or potentially hazardous waste) to determine environmental effects of exposure.

#### **D.1.3.4 Water Quality and Hydrology Personnel**

After an emergency, water quality and hydrology personnel provide sampling of surface water runoff and sediments to determine the environmental effects of an emergency and perform assessments for regulatory reporting requirements. They also provide expertise in hydrogeology to establish short- and long-term environmental effects of emergency conditions.

### **D.1.4 Other Facility Response Resources**

Emergency response personnel from the Plutonium Manufacturing and Technology Division at TA-55 are trained to respond to emergencies at that facility. Personnel from the Los Alamos National Laboratory (LANL) Transuranic Program may provide guidance on proper treatment, storage, and transportation of hazardous and mixed waste at TA-50 and TA-54.

### **D.1.5 Contracted Response**

Contracted response groups' representatives may report directly to the Incident Command Post (ICP), if requested. If the IC deems it necessary, the IC may designate an Operations Section Chief to aid in the coordination and direction of these groups. In addition, contracted response groups may report to a staging area, with a representative going either to the ICP or, if activated, to the EOC.

#### **D.1.5.1 Security Services**

Security personnel provide security service to the Facility. During an emergency, these activities include maintaining security, directing traffic within the Facility, and controlling access to the emergency scene. Security personnel maintain the necessary equipment (such as crowd-control equipment and patrol vehicles) to perform these functions.

#### **D.1.5.2 Maintenance Site Services**

Maintenance Site Services (MSS) provides a maintenance support force to the Facility. This support force is under the Permittees' direction in an emergency. MSS also provides a representative to the Facility in the event of an emergency and participates, as necessary, in post-emergency cleanup under the direction of a Recovery Manager designated by the IC. The duties of the Recovery Manager are discussed in Attachment Section D.10.

#### **D.1.5.3 Los Alamos Fire Department**

The LAFD provides fire protection and ambulance coverage for the residential communities of Los Alamos and White Rock and for the Facility. In the case of an emergency within the Facility, the LAFD coordinates fire suppression and Emergency Medical Services. The IC retains overall responsibility for the emergency response effort.

### **D.1.6 Facility Support**

#### **D.1.6.1 Health Physics Operations**

Radiation protection personnel perform routine site evaluation and monitoring to determine radiological conditions in facilities. They also provide guidance on radiological decontamination. In addition, this group augments the assessment and monitoring functions of the HAZMAT Group.

#### **D.1.6.2 Occupational Medicine Personnel**

1. The Facility maintains its own medical facility operated by occupational medicine personnel. Occupational medicine personnel provide appropriate medical treatment for occupation-related illnesses and injuries and monitors employees to assess the effectiveness of health protection programs.

2. Although occupational medicine personnel are not routinely involved with on-scene emergency response, the group maintains a central medical facility with a fully equipped emergency room and decontamination facilities at TA-3, Building 1411. The location of this and other emergency facilities are shown on Figure 49 in Attachment N (*Figures*). Medical staff at these facilities includes physicians, physician assistants, nurse practitioners, nurses, technicians, psychologists and counselors. All full-time medical providers and nurses receive radiation accident training. Occupational medicine personnel also maintain access to a database that provides the clinical staff with timely toxic exposure and treatment information.

#### **D.1.6.3 Industrial Hygiene and Safety Personnel**

Industrial hygiene and safety personnel assist occupational medicine personnel with their ability to obtain additional exposure and treatment information. In addition, they maintain computer access to the National Institute of Occupational Safety and Health Technical Information Center and the Registry of Toxic Effects of Chemical Substances. During routine operations, these personnel perform site evaluations and field testing to determine the nature and extent of chemical contamination and specify protective clothing and equipment.

#### **D.1.6.4 Performance Assurance Office**

The Performance Assurance Office assists the facility manager in investigating all adverse environmental, safety, health, and operational occurrences (on-site and off-site), determining the causal factors, identifying the appropriate corrective actions, and assisting in the preparation of reports documenting the occurrence to DOE. This group tracks corrective actions associated with such occurrences and maintains the information in an on-site database.

#### **D.1.7 Outside Response Agencies**

During an emergency, outside response agencies report directly to the IC. A Liaison Officer or an Operations Section Chief, designated by the IC, may aid in coordinating and directing the groups responding to an emergency.

##### **D.1.7.1 Los Alamos Police Department**

The Los Alamos Police Department (LAPD) may assume IC under unique circumstances, but usually has only minimal interaction with the Facility in an on-site emergency. This interaction normally involves traffic control on DOE roads with public access, handling criminal activity, and criminal investigations.

##### **D.1.7.2 Los Alamos County Emergency Management Coordinator**

Los Alamos County has an agreement with the Facility's SEO-3:EM to provide assistance in certain emergency situations. If an emergency occurs on Facility property that may affect the communities of Los Alamos and White Rock, SEO-3:EM personnel will notify the Los Alamos County Consolidated Dispatch Center which in turn will notify the Los Alamos County

Emergency Management Coordinator, who will coordinate necessary emergency actions throughout the county.

#### **D.1.7.3 Los Alamos Medical Center**

The Facility maintains a fully equipped decontamination room adjacent to the emergency room at LAMC. In the event that a case is sent to LAMC, support for the emergency room staff is provided by Facility occupational medical personnel. Radiation protection, industrial hygiene, and HAZMAT personnel also provide assistance to the emergency room staff; assistance from additional Facility resources is provided, as necessary. Assistance is coordinated through SEO-3:EM personnel.

### **D.2 EMERGENCY EQUIPMENT AND COMMUNICATIONS**

#### **D.2.1 Emergency Equipment**

The Permittees shall make available the lists of emergency equipment listed in Table D-1 for use at any of Permittees' hazardous or mixed waste management units. The list includes emergency equipment available in the HAZMAT vehicles and trailers as well as supplemental emergency equipment maintained by the LAFD, Maintenance Site Services, and occupational medicine personnel. A list of emergency equipment available for use at specific hazardous and/or mixed waste management units is identified in Attachment Tables TA-3, D-1; TA-50, D-1; TA-54, Area L, D-1; TA-54, Area G, D-2; TA-54 West, D-3; TA-55 Building 4 First Floor, D-1; TA-55 Building 4 Basement, D-2; TA-55 Container Storage Pad, D-3, and TA-63 Transuranic Waste Facility, D-4. Emergency equipment listed in these tables may be replaced and/or upgraded with functionally equivalent components and equipment, as necessary, for routine maintenance and repair.

#### **D.2.2 Emergency Communications**

The initial phase of an emergency may involve a small number of individuals at the affected area and that requires notification of the SEO-3:EM Duty Officer, utilizing local communication equipment and/or systems. When responding to hazardous and/or mixed waste emergencies, the Permittees shall ensure that SEO-3:EM personnel can provide communications between response units and emergency organizations.

##### **D.2.2.1 Fire Alarms**

Fire alarms are monitored 24 hours per day by trained personnel in the EOSC. Both the primary and backup buildings where the monitoring takes place have emergency power systems. The SEO-3:EM Duty Officer is notified when there is confirmed fire or smoke via the Los Alamos County Consolidated Dispatch Center.

#### **D.2.2.2 Power Dispatch**

The Permittees shall maintain the Power Dispatch facility 24 hours a day. Alarms at this facility are connected to Facility experiments, equipment, and/or buildings to record outages and hazardous conditions. Any conditions that activate these alarms shall be reported immediately to the building management or to the Los Alamos County Consolidated Dispatch Center operator for notification and response.

#### **D.2.2.3 Additional Communication Systems**

Internal communication systems at the Facility include:

1. Preprogrammed telephone system
  2. Private telephone lines
  3. A variety of frequency modulated very high frequency simplex repeater systems, including:
    - Multiple base stations
    - Mobile and hand-held units
    - Links to New Mexico public safety agencies
  4. An ultrahigh frequency radio system, including:
    - Multiple antenna sites
    - Mobile and base units
    - Links with the LAPD, the LAFD, and the State Medical System
  5. A 400-megahertz trunked radio system that includes a link with the LAFD
  6. Transmission and reception (through the EOC) for:
    - Secure telephone
    - Secure fax
    - Secure still video
    - Secure videoconference system (to all DOE EOCs and DOE Headquarters)
  7. Access to all radio systems outlined above (through the EOC).
  8. Mass Notification System
2. Off-site communications with federal, state, tribal, county, and other agencies are available through the following:
1. A preprogrammed telephone system
  2. Private telephone lines
  3. Two NAWAS stations
  4. Mass Notification System
3. The Permittees' EOC, maintained by SEO-3:EM personnel, operates radio systems on key Facility and off-site channels. Emergency personnel responding to on-site incidents have the benefit of wide-area radio coverage using EOC facilities. The SEO-3:EM Duty Officer is responsible for activating whatever support personnel, equipment, or services are needed 24 hours a day.

### **D.3 CONTINGENCY PLAN IMPLEMENTATION**

The following sections discuss requirements used to implement this Plan, emergency notification, SEO-3:EM Duty Officer activities and actions to be taken in response to fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents into the environment at the Facility.

#### **D.3.1 Requirements for Implementation**

1. The decision to implement this Plan depends upon whether an emergency exists, which for the purposes of this section is defined as an imminent or actual incident arising from fires, explosions, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents that could threaten human health or the environment. The SEO-3:EM Duty Officer or IC will use the guidelines listed below to decide whether to implement this Plan. The Permittees shall investigate all adverse environmental, safety, health, and operational occurrences (on-site and off-site) resulting in implementation of the contingency plan to determine causal factors and identify the appropriate corrective actions.
2. This Plan shall be implemented immediately in the following situations involving releases or potential releases of hazardous or mixed waste:
  1. Spills:
    - If a hazardous or mixed waste spill cannot be contained with secondary containment or application of sorbents
    - If a hazardous or mixed waste spill causes the release of flammable material, creating a fire or explosion hazard
    - If a hazardous or mixed waste spill results in toxic fumes that threaten human health
  2. Explosions:
    - If an unplanned explosion involving hazardous or mixed waste occurs
    - If an imminent danger of an explosion involving hazardous or mixed waste exists.
  3. Fires:
    - If a fire involving hazardous or mixed waste occurs
    - If any building, grass, forest, or nonhazardous waste fire exists that threatens to volatilize or ignite hazardous or mixed waste.
  4. Other Acts of Force Majeure
    - If an earthquake or other natural disaster threatens containment integrity, including precipitation that threatens to move spilled material off site.

#### **D.3.2 Emergency Notification**

1. Emergency notification requires immediate notification of 667-6211 or SEO-3:EM personnel upon discovery of an imminent or actual incident involving hazardous and/or mixed waste. During nonworking hours, personnel will report all imminent or actual incidents involving hazardous and/or mixed waste to the Emergency Manager at 667-6211. In the case of fire, notification of these individuals is superseded by the Facility fire alarm system. A fire is reported by dialing 911, activating automatic alarms, or activating a fire alarm pull box. All fire

alarms alert EOSC who alerts the SEO-3:EM Duty Officer and the Los Alamos County Consolidated Dispatch Center, who contacts the LAFD.

2. Upon recognition of a hazardous or mixed waste emergency, the first arriving emergency-trained person will become the Facility Command Leader. Once SEO-3:EM personnel are notified of the emergency, the SEO-3:EM Duty Officer will proceed to the scene and be briefed by the Facility Command Leader, building/area personnel, and/or other emergency units/teams. The SEO-3:EM Duty Officer will then assume the position of IC. If necessary, the IC may recommend activation of the EOC and the emergency management team. The IC will assign ICS positions and update the EOSC and request necessary resources. The EOSC will notify the appropriate emergency response groups. The IC may determine from the list of response groups described in Attachment Sections D.1.2 through D.1.7 which groups to contact in an emergency. Each response group maintains an on-call person and/or a call-down procedure to respond to emergencies.

3. SEO-3:EM personnel shall be notified of any potential hazardous or mixed waste emergency. The IC will use whatever means are available (including the assistance of other response groups, computer data searches, and sampling) to determine if a hazardous or mixed waste emergency exists.

4. The Facility Emergency Manager or his or her designee shall make best efforts to timely communicate the nature of the emergency and the hazards that may be present to any outside response agency whose assistance may be required.

### **D.3.3 Emergency Manager Actions**

1. Upon notification of an emergency incident, the SEO-3:EM Duty Officer may:

1. Make an initial assessment of the incident and, in conjunction with the Facility Command Leader, obtain resources to determine the source, quantities, and types of hazardous and/or mixed waste involved and the areal extent of any released materials.
2. Request resources needed and have EOSC staff begin notifications.
3. Proceed directly to the scene.
4. Assess the nature of the incident (*e.g.*, through communication with the IC).
5. Assume incident command after a direct briefing with the Facility Command Leader.
6. Based on the guidelines in Attachment Section D.3.1 of this Plan, determine if implementation of this Plan is warranted.
7. Activate the EOC, if necessary.

2. Upon deciding to implement this Plan, the IC will, when appropriate:

1. Assess the hazards to human health and the environment, including both direct and indirect effects, such as generation of toxic, irritating, or asphyxiating gases and/or hazards of runoff of water or chemicals used for fire suppression. An individual designated by the IC will use the guidelines in Section D.3.1 to assess the hazards to human health and the environment. If any of the criteria under Section D.3.1 are met

and if the responsible Line Manager (or his/her designee) has not already accomplished evacuation of the area, the IC will initiate shelter in place or evacuation of the immediate area.

2. Direct the EOSC staff to initiate protective actions and immediately notify appropriate response groups and personnel as per the SEO-3:EM Guidelines. The Los Alamos County Emergency Coordinator may activate one or more of the following community alert mechanisms: reverse 911, the AM 1490 KRSN radio, or the cable television capture system, site wide area network radios, and public radio and television channels.
  3. In the case of fire or release of any type, make reasonable efforts to confirm that all response personnel at the scene are aware of actual or imminent special hazards associated with hazardous or mixed waste.
  4. In emergency situations, contact the appropriate ENV representative to notify the Department's Hazardous Waste Bureau and the National Response Center at (800) 424-8802, reporting:
    - The name and telephone number of the ENV representative
    - The name and address of the facility
    - The time and type of incident
    - The name and quantity of material involved, to the extent known
    - The extent of injuries, if any
    - The possible hazards to human health or the environment outside the facility.
  5. When an emergency occurs at hazardous or mixed waste treatment units, ensure that appropriate Facility personnel monitor for leaks, pressure buildup, gas generation, or equipment ruptures.
3. Once control of the emergency is established, the IC will take all reasonable measures to minimize the occurrence, recurrence, or spread of fires, explosions, or releases. In addition, the IC will delegate cleanup and decontamination responsibilities to the Recovery Manager. These responsibilities may include:
1. Arranging for site cleanup.
  2. Assisting with arrangements for proper handling of recovered waste, contaminated soil, or contaminated surface/groundwater.
  3. Assisting with arrangements for decontamination of equipment, as needed.
  4. Arranging for replacement and/or repair of equipment, as needed.
  5. Requesting that testing is conducted to verify successful cleanup.
4. The Permittees shall report implementation of this Plan in accordance with Permit Sections 1.9.12, 1.9.13, and 2.11.6.3.

#### **D.4 SPILLS**

1. Sudden releases may include spills of hazardous or mixed waste that pose a significant threat to human health or the environment. Spill incidents resulting in a sudden release of hazardous or

mixed waste that present a potential threat to human health or the environment, as listed in Attachment Section D.3.1, require implementation of this Plan.

2. Hazardous and mixed wastes are stored on site at the Facility in a variety of containers. The general steps in handling hazardous and/or mixed waste spills are as follows:

1. Isolate the immediate area and deny entry to all unauthorized personnel;
2. Contain the spill by spreading sorbents or forming temporary dikes to prevent further migration (performed by properly trained personnel, if safe);
3. Monitor the spill area and sample the spilled waste and contaminated media.
4. Package the waste and contaminated media in sound containers;
5. Decontaminate the area and all involved equipment and personnel (followed by testing to assure adequate cleanup); and
6. Remove the waste and contaminated media (performed by appropriate waste management personnel).

3. The IC will determine the steps to be taken for spill mitigation. If initial mitigation of the spill is necessary and can be accomplished safely (by appropriately trained personnel) before the Emergency Manager arrives, a qualified member of the affected area's operating group will serve as the Facility Command Leader.

4. The Permittees shall ensure that hazardous and/or mixed waste spills are stabilized and cleaned up. During spill control and cleanup, all personnel shall wear appropriate personal protective equipment (PPE). Monitoring will be conducted to ensure that chemical and, as appropriate, radiological exposure is minimized. The collected material may be treated as hazardous or mixed waste, depending on the components present. Runoff from spills of listed hazardous or mixed waste that have migrated outside hazardous waste management areas must be contained and managed as hazardous or mixed waste, as appropriate. If the spill was from a characteristic hazardous or mixed waste and if it is determined by analysis that the runoff does not exhibit the characteristic (*i.e.*, ignitability, corrosivity, reactivity, and/or toxicity), the runoff need not be managed as characteristic waste. Temporary dikes may be constructed to contain runoff.

#### **D.4.1 Spill Control Procedures**

When a flammable organic solvent spill, a highly acidic spill, or a highly caustic spill has been stabilized with the contents of an organic solvent spill kit, an acid spill kit, or a caustic spill kit, respectively, the resulting material may be sorbed using a nonbiodegradable sorbent. Nonbiodegradable sorbent can be used to control any spill if it is known to be compatible with the spilled material. Appropriate containers or packaging shall be used to collect all spilled material and contaminated sorbent. Attachment Tables TA-3, D-1; TA-50, D-1; TA-54, Area L, D-1; TA-54, Area G, D-2; TA-54 West, D-3; TA-55 Building 4 First Floor, D-1; TA-55 Building 4 Basement, D-2; TA-55 Container Storage Pad, D-3; and TA-63 Transuranic Waste Facility, D-4 list emergency equipment available for spill control at specific units. The ultimate disposition of any contaminated sorbent or waste material shall be determined by appropriate waste

management personnel, and in accordance with hazardous waste management regulatory requirements.

#### **D.4.1.1 Tank System Spill Control and Reporting**

1. The Permittees shall remove a tank system from service immediately using approved shutdown procedures if a leak or spill occurs from the tank system or its secondary containment system or if the system is determined to be unfit for use. Further addition of waste to the tank system or containment system will cease and the system shall be visually inspected to determine the cause of the leak or spill. If a leak occurs from a tank system, as much of the waste as is necessary to prevent further release of waste will be removed within 24 hours after detection or as early as practicable, and the system will be inspected and repaired. All released waste will be removed within 24 hours or as soon as possible if a leak occurs to a tank's containment system.
2. If a spill from a tank is not immediately contained and cleaned up and exceeds a quantity of one pound, the release will be reported to the Department within 24 hours of its detection in accordance with the requirements of 40 CFR § 264.196(d)(1). In addition, the Permittees shall report in accordance with Permit Section 1.9.12 and 2.11.6.3. That report shall describe the likely migration route of the release; soil characteristics at the site; monitoring and sampling data relevant to the release; proximity to down gradient drinking water, surface water, and populated areas; and response actions taken or planned.

#### **D.4.1.2 Tank System/Secondary Containment Repair and Closure**

If the integrity of a tank system, including its secondary containment, has not been damaged by a spill, the system may be returned to service. Service may not resume until after all released waste is removed and repairs, if necessary, are made. Any tank system that cannot satisfy the criteria described above shall undergo closure in accordance with the requirements of 40 CFR § 264.197.

#### **D.4.1.3 Certification of Major Repairs**

If a tank system undergoes extensive repairs (*e.g.*, installation of an internal liner, tank system piping retrofit), the tank system will not be returned to service until a certification by an independent, qualified registered professional engineer is obtained, verifying that the repaired system is capable of handling wastes without release for the intended life of the system. This certification will be submitted to the Department within seven days after returning the tank system to use.

#### **D.4.2 Decontamination Verification**

1. Decontamination will be accomplished at the spill site by removal of all contaminated material. After the spilled material has been sorbed, the material will be containerized. If the spill occurs on a concrete or asphaltic-concrete area, water or an appropriate solvent will be used to clean the area. Liquids (*i.e.*, spilled material and cleaning water or solvents used to clean a spill) may be sorbed with a compatible, nonbiodegradable sorbent and containerized. If a spill is

from an identifiable source, the spilled material may be characterized as a newly-generated waste using acceptable knowledge or may be analyzed, as applicable, for the hazardous waste constituents known to be components of the waste managed at that unit. Analytical method(s) given in Table D-3 will be utilized, as appropriate. If the spill is from other than an identifiable source, the spilled material will be analyzed for the appropriate parameters listed in Table D-3. All personnel conducting decontamination verification will wear appropriate PPE. Radiation protection personnel will conduct health physics monitoring whenever mixed waste is involved to ensure that radiation exposure is maintained as low as reasonably achievable. Any hazardous or mixed waste collected from decontamination activities will be handled appropriately.

2. In order to establish baseline data, a sample of decontamination water or solvent (and nonbiodegradable sorbent material, as applicable) will be taken prior to the start of the decontamination effort. A sample of the final washwater (or the used sorbent) will then be taken. The baseline samples and final washwater/used sorbent samples will be analyzed for the applicable parameters given in Attachment Table D-2. If the decontamination samples contain hazardous constituents that are not present in the baseline samples the decontamination procedure shall be repeated. An alternative demonstration of decontamination may be proposed and justified to the Department, who will evaluate the proposed alternative in accordance with the standards and guidance currently in effect. If the proposed alternative is accepted, decontamination levels will meet the levels approved by the Department. Each sample will be collected with an appropriate sampling device (*e.g.*, a thief or trier) as specified in "Test Methods for Evaluating Solid Waste, Physical/Chemical Methods" (EPA, 1986), and approved updates, as applicable.

3. If a hazardous/mixed waste spill occurs on soil, any free liquid present will be collected and containerized. Liquids may be sorbed with a compatible nonbiodegradable sorbent prior to containerization. For such a spill, contaminated soil will either be excavated and containerized or remediated in situ. Industrial health and safety personnel will conduct industrial hygiene monitoring and, if mixed waste is involved, radiation protection personnel will conduct health physics monitoring, if deemed necessary, to minimize exposure during soil removal or remediation operations. Excavation or remediation will continue until soil contaminant concentrations are at a level approved by the Department.

4. If a hazardous/mixed waste spill occurs in an area with flooring, the floor will either be removed in lieu of decontamination, or the floor will be decontaminated. If the decision is made to decontaminate the floor, swipe samples or other types of sampling appropriate for the contaminant will be collected at random and characterized for decontamination verification. If, after several decontamination efforts, it is subsequently determined that the affected floor area cannot be decontaminated, the floor material will be removed. In all cases, wastes generated during the decontamination and/or removal process will be managed appropriately.

## **D.5 EXPLOSION**

1. Explosions and resultant releases may result in a significant threat to human health or the environment. The potential exists for hazardous or mixed waste to be released during an

explosion. Implementation of this Plan is required whenever there is an explosion at a permitted unit.

2. In the event of an explosion at the Facility, all personnel will immediately evacuate the area. Any injured personnel will be decontaminated at the site, if required and if time allows. An LAFD ambulance will transport these personnel to LAMC for treatment. If an injury is severe and requires immediate medical evacuation, the injured person will be wrapped to contain contamination, if necessary. In the case of an actual or potential explosion, on-site personnel will contact SEO-3:EM personnel immediately so that the Emergency Manager can ensure that all necessary emergency response personnel are alerted. The LAFD is notified automatically upon fire alarm activation. The Emergency Manager assumes incident command and will remain near but at a safe distance from the site in order to inform personnel responding to the explosion of the known hazards.
3. If a fire results from an explosion, the LAFD Senior Officer will, upon arrival at the scene, evaluate all available information and determine the appropriate firefighting methods and tactics. The LAFD Senior Officer will direct firefighting operations as the acting IC until SEO-3:EM formally assumes command.

#### **D.6 FIRE**

1. Fires and resultant releases of hazardous or mixed waste may result in a significant threat to human health or the environment. Implementation of this Plan is required whenever there is a fire at a permitted unit.
2. Fire alarms will be sounded automatically or manually to alert personnel that a fire hazard exists and to evacuate the area immediately if in the vicinity. Information related to the various fire alarms at the specific units is included in Attachment Tables TA-3, D-1; TA-50, D-1; TA-54, Area L, D-1; TA-54, Area G, D-2; TA-54 West, D-3; TA-55 Building 4 First Floor, D-1; TA-55 Building 4 Basement, D-2; TA-55 Container Storage Pad, D-3; and TA-63 Transuranic Waste Facility, D-4.
3. Depending on the size of the fire and the fuel source, portable fire extinguishers may be used. However, Facility policy does not encourage the use of portable fire extinguishers by employees unless they are properly trained. Instead, Facility policy encourages immediate evacuation of the area and notification of the Los Alamos County Emergency Coordinator by dialing 911. For any fire, including a fire that involves hazardous or mixed waste, the responsible Line Manager and SEO-3:EM personnel must be contacted immediately. The Emergency Manager will alert the LAFD and all other necessary emergency response personnel. If the fire spreads or increases in intensity, all personnel must follow protective actions as designated by the Emergency Manager. The Emergency Manager assumes incident command and will remain near the scene to advise personnel responding to the fire of the known hazards.
4. Upon arrival at the scene, the LAFD Senior Officer will evaluate all available information and determine the appropriate firefighting methods and tactics. The LAFD Senior Officer will direct

firefighting operations as the acting IC until the SEO-3:EM Duty Officer formally assumes command.

## **D.7 UNPLANNED NONSUDDEN RELEASES**

Nonsudden releases include those incidents that, if uncontrolled, impact the environment over a long period of time. Such incidents include minor leaks from containers and loss of secondary containment integrity.

### **D.7.1 Responsibility**

Appropriate Facility personnel are responsible for correction of a nonsudden release from a hazardous or mixed waste unit if the correction can be performed safely with normal maintenance and management procedures. Personnel from SEO-3:EM may provide assistance in mitigating releases. Any correction methods for nonsudden releases that have resulted in an impact to the environment will be coordinated with the Department.

### **D.7.2 Nonsudden Releases**

1. In general, the response to a nonsudden release will be to contain the release, to correct the cause of the release, and to clean up any release to a level that protects human health and the environment.
2. Appropriate Facility personnel shall conduct regularly scheduled inspections to detect failure of containment at the unit(s) addressed in this Permit. Secondary containment systems shall be inspected regularly to ensure that the integrity of the containment systems has not deteriorated. If an inspection reveals that containers are leaking or that secondary containment has deteriorated, Facility personnel shall ensure that maintenance or replacement of containment is performed, as appropriate. Inspections will be conducted in accordance with the facility's inspection plan.

### **D.7.3 Nonsudden Release Surveillance**

1. In addition to routine inspection and site-specific sampling and testing, the Permittees shall maintain an area-wide environmental monitoring network. Monitoring and sampling locations for various types of measurements are organized into three main groups. Regional monitoring stations located within the counties surrounding Los Alamos County are placed up to 80 kilometers (50 miles) from the Facility. These stations serve to determine background conditions. Perimeter stations are generally located within four kilometers (2.5 miles) of the Facility boundary and document conditions in residential areas surrounding the Facility. On-site stations, most of which are accessible only to employees during normal working hours, are within the Facility boundary.
2. Different types of surveillance sampling conducted at these stations include measuring radiation and collecting samples of air particulates, surface waters, groundwater, soil, sediment, and foodstuffs for subsequent analysis. Additional samples provide information about particular

events, such as major runoff events and nonroutine releases. Data from these efforts are used for comparison with standards, for determining background levels, and for radiation dose calculations.

## **D.8 EXPOSURE TO HAZARDOUS OR MIXED WASTE**

1. If a person is exposed to hazardous or mixed waste, the affected person, a co-worker, or line management will notify SEO-3:EM personnel. Appropriate first aid should be administered immediately. An SEO-3:EM representative will make appropriate notifications as soon as possible so that exposure levels and decontamination requirements can be established. The affected person will then be transported to the occupational medical facility or to LAMC for evaluation. If possible, the material involved in the exposure will be ascertained, and the information will be given to the medical staff.

2. Other potential exposures will necessitate evacuation of the area, if appropriate, or under any of the following conditions:

1. Irritation of the eyes, breathing passages, or skin
2. Difficulty in breathing
3. Nausea, lightheadedness, vertigo, or blurred vision.

3. The affected person will be transferred to the occupational medical facility or to LAMC if there is a serious injury. An industrial health and safety, radiation protection, or HAZMAT representative will attempt to ascertain what, if any, exposure occurred and what corrective measure is appropriate.

## **D.9 EVACUATION**

A permitted unit shall be evacuated upon the voice command to evacuate the area or upon the sounding of the evacuation or fire alarm. The IC may call for sheltering in place when evacuation is impractical due to significant airborne hazards. Shelter in place may be possible in a designated area or in a building where all exterior windows and doors may be closed and outdoor air ventilation equipment turned off. Once the airborne hazard has decreased, personnel would then be evacuated.

### **D.9.1 Emergency Process Shutdown Prior To Evacuation**

Personnel are instructed to shut down equipment prior to evacuating a building/area unless an immediate building/area evacuation is announced or signaled. To ensure efficient shutdown, training and exercises addressing the shutdown process are performed. In the case of an immediate evacuation, a selected team may shut down designated equipment in an evacuated area upon approval of command. The team will be equipped with proper equipment and PPE. If they are on location, radiation protection, industrial health and safety, and/or HAZMAT personnel will provide advice and assistance.

### **D.9.2 Evacuation Plan**

1. Emergency situations may warrant the shutdown and evacuation of areas or buildings in order to protect personnel and property, to anticipate the emergency condition, or to enhance the appropriate response. Attachment Table D-3 lists the criteria for evacuation, persons responsible for initiating evacuations, and reentry conditions.
2. To initiate the evacuation of a building/area, the evacuation or fire alarm is sounded and/or the public address (PA) system may be used. Evacuation alarms cannot be silenced and reset by site personnel. Only the Fire Alarm Maintenance Section and the LAFD Battalion Chief can silence and reset alarms. To evacuate a portion of a building or area, use of the PA system may be more appropriate. The PA system will notify the occupants of the area to be evacuated and will advise personnel throughout the building of the existence of a problem in a specific area. Once evacuation has been initiated and if conditions allow, personnel will turn off all equipment that could contribute to the hazard if left unattended. All personnel will then proceed from the affected area to the assembly/muster area.
3. In the event of evacuation of a building, an outbuilding, or an outlying work area, the responsible Line Manager (or his/her designee) will determine a control point at the closest safe location (*e.g.*, considering wind direction). The designated area will be outside the affected area and will serve as an assembly/muster area where the Line Manager (or designee) can oversee evacuation operations and work to prevent further spread of the hazard.
4. As personnel exit an affected building/area, a primary sweep of the building/area may be performed to ensure that all personnel have evacuated. If the building/area is evacuated, a Group Leader designee will take attendance at the assembly/muster area and report personnel accountability to the IC. The evacuation procedure is as follows:
  1. The person discovering the accident or emergency will call 911 if the event is life-threatening or LAFD is required, or 667-6211 for all other evacuations. The person will then notify line management.
  2. Site-specific BEPs and/or emergency action procedures will be followed concerning evacuation, sweep, personnel accountability, and equipment shutdown procedures.
5. A responsible on-site person may direct the initial evacuation and the fire alarm system may be activated. SEO-3:EM personnel will be notified and dispatched immediately. A responsible on-site person may implement and direct the evacuation process until the SEO-3:EM Duty Officer or LAFD arrives at the scene to assume that responsibility.

### **D.10 SALVAGE AND CLEANUP**

1. Appropriate representatives from the ENV groups will survey the affected area before salvage and cleanup begin. They will conduct visual inspections and sampling, as appropriate, of the affected area to determine whether cleanup is complete. If gases or fumes, electrical or radiological problems, or other conditions present a hazardous situation, personnel or selected teams equipped with proper PPE will reenter the area to perform designated decontamination

tasks, repairs, and salvage to allow the return to normal operations. After an emergency, the IC will turn the operation over to a designated Recovery Manager, who will:

1. Provide for proper handling of recovered waste, contaminated soil or surface water, or any other material that results from a spill, fire, or explosion. Contaminated material will be managed appropriately and temporarily stored at one of the hazardous or mixed waste storage areas at the Facility. Waste management personnel will be responsible for determining the final disposition of the waste. This determination will be made in compliance with hazardous waste management regulations.
  2. Arrange to monitor for damage or improper operation of the unit and associated equipment as a result of the emergency or of plant shutdown in response to the emergency.
  3. Arrange for site cleanup procedures to be completed and ensure that no waste that may be incompatible with the released material is treated or stored in the same area.
  4. Ensure that emergency equipment is cleaned, decontaminated, and fit for its intended use before operations are resumed. Equipment will be inspected visually and then sampled, if necessary, to determine the type and degree of contamination and to determine appropriate cleanup measures.
2. Prior to resuming operations, the Permittees shall verify that the previously mentioned tasks have been performed. The Permittees shall notify appropriate state and local authorities that cleanup procedures are completed and that emergency equipment is clean and fit for its intended use.
3. The IC assumes the coordination of post-emergency actions (particularly during the time period immediately following the emergency) until a Recovery Manager is appointed. The Recovery Manager then assumes this coordination role. The Recovery Manager is the functional equivalent of the Emergency Coordinator for post-emergency actions. The post-emergency actions include cleanup operations, vital equipment repair, or interim hazard-removal operations (such as arranging for demolition of unstable walls). The services of affected operational organizations, ENV groups, maintenance personnel, and other on-site resources will also be used to estimate cleanup costs and operational impact.

#### **D.11 EMERGENCY RESPONSE RECORDS AND REPORTS**

The Permittees shall ensure that any emergency that requires implementation of this Plan will be documented and reported in accordance with Permit Section 1.9.12, 1.9.13, and 2.11.6.3. This information will be maintained in the facility operating record.

#### **D.12 CONTINGENCY PLAN AMENDMENT**

The Permittees shall review this Plan at a minimum annually. The Plan will be amended immediately if determined to be inadequate to handle releases (spills, explosions, and/or fires) and whenever:

1. The facility permit is revised;

2. There is change in the design or operation of the facility (e.g., quantities of waste handled and handling techniques) that increases the likelihood of an emergency and requires changes in emergency response;
3. The Primary Emergency Manager changes; and
4. The list of emergency equipment changes significantly.

**Los Alamos National Laboratory-Wide Emergency Equipment  
Hazardous Materials (HAZMAT) Vehicles and Associated Emergency Equipment**

---

HAZMAT vehicles and trailers are located at Technical Area (TA) 64, Building 39 (TA-64-39). They are available to the Security and Emergency Operations Division's Emergency Response Group (SEO-1:ER) for emergency response to all of the TAs at the Facility. SEO-1:ER is responsible for maintaining the supplies of appropriate emergency equipment in each vehicle and trailer.

The HAZMAT vehicles and trailers are equipped with safety and emergency equipment, personal protective clothing, and other supplies, which may include, but are not limited to, some or all of the following:

- Assorted personal protective equipment, T-shirts, and gloves
- Safety goggles, safety glasses, and face shields
- Boots and booties
- Totally encapsulating suits and boots
- Level A and B suits
- Flash suits
- Self-contained breathing apparatus (SCBA) and SCBA bottles
- Respirators and cartridges
- Hazardous chemical reference books and other reference materials
- Shovels
- Siphon pumps
- Assorted spill kits and sorbents
- Neutralizing solutions: acids, bases, and caustics
- Two-way radios, cellular phones, facsimile, and other communication equipment
- Bottles of leak detector and leak repair kits
- Emergency repair packs
- HAZMAT bags
- Gas detectors and chemical monitoring equipment
- Radiological monitoring equipment
- Sponges and cleaners
- Warning signs and barricade tape
- Traffic control barriers
- Flashlights
- Cameras and film
- Knives
- Portable power supplies
- Warning and signal horns
- Harnesses and belts

Decontamination equipment  
Sampling equipment  
Lifting equipment and vetter bags  
Assorted tools, tape, and other supplies  
Non-sparking tools  
Biological detection equipment  
Chemical vacuums  
Sandia foam  
Plugging and diking equipment  
Sample van equipped with a glovebox and analysis equipment  
Environmental continuous air monitoring equipment  
Robot  
National Atmospheric Release Advisory Center-Internet Client (NARAC Client)  
Hotspot plume modeling program  
Mass decontamination trailer with tent and supplies  
Portable decontamination trailer  
Portable structures  
Tents  
Trucks  
Trailers  
International Shipping Units  
Portable hot water heater  
Forklift  
Automated external defibrillators

---

**Supplemental Emergency Equipment and Personnel Available From the Los Alamos Fire Department (LAFD)**

---

Supplemental emergency equipment available from the LAFD may include, but is not limited to, some or all of the following:

Fire engines  
Mini-tankers with compressed air foam capability  
Modular ambulances  
Rescue vehicles  
Crash-Fire-Rescue (CFR) unit  
Water tankers with compressed air foam capability  
Incident Command vehicles  
SCBA units  
SCBA air tanks  
Remote air system for confined space rescue  
Ladder truck with pump  
Personnel with Hazardous Material First Response Operational Level training  
Personnel with Basic Emergency Medical Technician training

Personnel with Advanced Life Support training

---

**Supplemental Emergency Equipment and Personnel from Maintenance and Site Services (MSS)**

---

Supplemental emergency equipment may include, but is not limited to, some or all of the following:

**TRANSPORTATION EQUIPMENT**

Pickups, 1/2 through 3/4 ton  
Trucks, 1 through 3 ton  
Vans, panels, and carryalls  
Buses

**SPECIAL EQUIPMENT**

Graders  
Loaders  
Snowplows and snow blowers  
Bulldozers  
Scrapers  
Semitrailers  
Chain saws  
Street flushers  
Mobile transceivers  
Generators  
Handsets (2-way)  
Pageboys (1-way)  
Welders  
Mobile site logistics support equipment/associated heavy equipment  
Fully equipped spill response unit  
Utilities equipment and emergency utility support  
Fuel trucks  
Light banks  
Dump trucks  
Backhoes  
Potable water trucks  
Cranes  
Forklifts

**TRAINED PERSONNEL**

Heavy equipment operators  
Dispatchers  
Mechanics

Power saw operators  
Radio and telephone operators  
Truck drivers  
Rodent/Pest Control personnel  
HAZMAT response/cleanup personnel  
Welders  
Electricians

---

**Emergency Equipment and Personnel at the Occupational Medicine Clinic Occupational Medicine Group (OM)**

---

**At TA-3 (SM-1411) Central Clinic**

Emergency equipment and supplies available from OM may include, but are not limited to, some or all of the following:

**PERSONNEL**

Physicians  
Physician Assistants  
Nurse Practitioners  
Nurses  
X-ray Technician  
Clinical Laboratory Technicians  
Clinical Testing Technicians  
Clinical Psychologist  
Counselors

**SPECIAL EQUIPMENT-PORTABLE**

Multichannel emergency receiver-base station  
Two-way radio on the State Med Net, the Facility Emergency Management channel, and the Facility Health-Safety Net  
Cardiac monitors and defibrillators  
Crash cart emergency equipment with E-tank oxygen (O<sub>2</sub>)  
Portable physicians' bag with medications  
Portable suction unit  
Portable stretchers (ambulance, gurney, folding)  
Wheelchairs  
O<sub>2</sub> tanks  
Manual resuscitators  
Intravenous (IV) stands  
IV solutions  
Otosopes/ophthalmoscopes  
Portable sphygmomanometers  
Stethoscopes

Anticontamination apparel  
Eye irrigation solution  
First-aid kits  
Extrication and cervical collars, crutches, canes  
Suture sets  
Protective apparel  
Morgan lens irrigation sets  
Decontamination equipment (portable)

#### **SUPPLIES-GENERAL**

Bedding/pillows  
Rescue blankets  
Burn blankets  
Thermal/icing pouches  
Multitrauma dressings, surgical and first aid supplies  
Disposable ice bags

#### **SPECIAL FACILITIES - NONPORTABLE**

Fully equipped decontamination room at the Occupational Medicine Clinic  
Completely equipped emergency room with ambulance entrance  
Emergency lighting system  
Complete X-ray suite  
Protective clothing and wound counters  
12-lead electrocardiograph  
Fully equipped crash cart with Life Pak defibrillator/external pacer, intubation equipment, emergency medications  
Fully equipped decontamination room at Los Alamos Medical Center (LAMC) adjacent to the LAMC emergency room

#### **TRANSPORTATION**

Full ambulance service is available within minutes to the central facility.

#### **COMMUNICATION**

Base station on State Medical Net and Los Alamos Fire Department trunked radio system.

**Table D-3**  
**Evacuation Determination and Re-Entry Conditions**

<b>Reason for Evacuation</b>	<b>Evacuation Determination Made by</b>	<b>Reentry Conditions<sup>a</sup></b>
Fire	<sup>1</sup> Fire or evacuation alarm, Line Manager or alternate, Lead Engineer, Senior Staff Member present, Senior Technician, or Emergency Manager	Following survey by the person designated by the IC <sup>b</sup>
Explosion	Same as 1 above	Same as above
Loss of ventilation	<sup>2</sup> Line Manager or alternate, Senior Staff Member, Lead Engineer, or Senior Technician, or Emergency Manager	Same as above
Loss of electric power	Same as 2 above	Same as above
Extensive contamination	Same as 2 above or health physics representative	Same as above
Airborne contamination	Same as 2 above or Radiation Monitor	Same as above
Escape or release of toxic or hazardous gas or fumes	Line Manager or alternate, Senior Staff Member, Lead Engineer, Senior Technician, or Emergency Manager	Same as above
Bomb or bomb threat	EO-EM <sup>c</sup> or security personnel , R&D <sup>d</sup> Section Leader or alternate, Senior Staff Member, or Lead Engineer	Same as above

<sup>a</sup> All reentries are authorized by the SEO-3:EM Incident Commander.

<sup>b</sup> "IC" refers to the Incident Commander as defined in 29 CFR § 1910.120.

<sup>c</sup> "EO-EM" refers to the Emergency Management Group.

<sup>d</sup> "R&D" refers to the Research and Development Section

**TA-3**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

**TA-3**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

Specific information on emergency response resources and release prevention/mitigation at TA-3 is provided below.

The CMR Building at the Facility has a facility-specific Emergency Management Plan (EMP) to ensure that emergency planning and preparedness for the CMR Building are commensurate with the facility and the nature of work performed there and to provide sufficient subject matter experts at the facility, should an emergency occur.

The EMP establishes the CMR Facility Emergency Response Organization, which is comprised of a facility Emergency Response Team (ERT), Facility Incident Command (FIC), and the CMR Operations Center. The CMR ERT is a 2 member group of volunteer facility personnel trained to provide initial response to emergencies. The FIC is comprised of division and line managers and key personnel who respond to pre-designated locations for the purpose of initial command and control of events that occur during CMR Building emergencies. The CMR Operations Center is the emergency communications focal point and has the responsibility of development and maintenance of alarm response instructions, notification lists, and call-out lists. When mitigation of the emergency is beyond the capabilities of CMR or when injuries occur or could potentially occur due to the emergency, EO-EM and the EO-EM Duty Officer is required to respond.

“The CMR Facility Emergency Management Plan Training for CMR Workers” (LANL, 1999), includes information on emergency equipment (*see* Table TA-3, D-1 of this Attachment Section); evacuation routes and primary and secondary evacuation assembly areas; and evacuation procedures for the FIC, persons wearing anti-C clothing, and persons in non-anti-C clothing. The CMR EMP also includes emergency categorization, lists of potential facility emergencies, their associated alarms, and the appropriate response to the emergency and/or the alarms. Evacuation routes, evacuation area locations, and emergency equipment are subject to change.

**Table D-1**  
**TA-3**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

Dry chemical fire extinguishers are available in Rooms 9010, 9020, and 9030.

Description of General Capabilities:

Each fire extinguisher has a 10-pound minimum capacity and may be used by any qualified employee in the event of a small fire.

Nine fire hydrants are located around the outside perimeter of Technical Area (TA) 3, Building 29 (TA-3-29). The nearest fire hydrants to Rooms 9010, 9020, and 9030 are located on the south side of Wing 9 and west of Wing 5.

Description of General Capabilities:

The fire hydrants supply water at an adequate volume and pressure to satisfy the requirements of 40 CFR § 264.32(d).

Fire alarm pull boxes are located in Rooms 9010 and 9020.

Description of General Capabilities:

Manually-operated fire alarms may be activated by any employee in the event of fire to notify the Los Alamos Fire Department (LAFD) and security personnel.

Sprinkler systems are located in Rooms 9010, 9020, and 9030.

Automatic thermal alarm systems are located in Rooms 9010, 9020, and 9030.

Description of General Capabilities:

The sprinkler systems and thermal alarm systems are heat activated. Security personnel and the LAFD are alerted when a system has been activated.

**SPILL CONTROL EQUIPMENT**

Spill control kits are located in Rooms 9010, 9020, and 9030. Spill kits include (but are not limited to) sorbent pillows, and/or absorbent.

Description of General Capabilities:

Sorbent is used in the event of a small spill.

**COMMUNICATION EQUIPMENT**

Telephones are located in the north enclosure of Room 9010, in Room 9020, and in Room 9030.

Paging phones and evacuation alarms are located in Rooms 9010, 9020, and 9030.

Description of General Capabilities:

Telephones are used for internal and external communication and have paging capabilities. The evacuation alarm is a pulsating sound that can be heard over the public address system. The fire alarm is a double slow-whoop sound.

**DECONTAMINATION EQUIPMENT**

Emergency shower and eyewash stations are located in the two enclosures in Rooms 9010, 9020, and in Room 9030.

Safety data sheets (SDS) are available hard copy or via online database.

Description of General Capabilities:

Emergency shower and eyewash stations are used by personnel who receive a chemical splash to the skin or eyes. Specific SDSs for the chemicals should be obtained prior to working with hazardous or mixed waste to determine if the application of water is indicated for decontamination.

**PERSONAL PROTECTIVE EQUIPMENT**

Personnel at TA-3-29 are required to use appropriate personal protective equipment (PPE) to protect themselves from hazards found in the workplace under normal conditions. This PPE may include gloves, steel-toed shoes, and safety glasses. Additional PPE may be required during an unusual hazardous situation or during sampling activities.

Self-contained breathing apparatus are made available if necessary in the event of an emergency by HAZMAT Personnel.

Room 9102 is a change room with protective clothing available.

Full-mask negative pressure respirators are available as needed; radioactive particulate filters are available.

**OTHER**

See Table D-1 of this Contingency Plan for equipment available in the Hazardous Materials Response Group vehicles and trailers.

**TA-50**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

**TA-50**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

Specific information on emergency response resources and release prevention/mitigation at TA-50 is provided below.

Emergency equipment currently available for use at the permitted units at TA-50-69 are included in Table D-1 below. A list of emergency equipment (including spill equipment) available from the SEO-3:EM and SEO-1:ER is presented in Table D-1 in this Attachment.

Hazardous and mixed waste spills are managed by type and severity of the incident. If a hazardous/mixed waste spill occurs, the Incident Commander evaluates the type and severity of the spill and determines if assistance from SEO-3:EM personnel is required. If not, the spill is managed internally by TA-50 personnel.

**Table D-1**  
**TA-50**  
**EMERGENCY EQUIPMENT**

---

**FIRE CONTROL EQUIPMENT**

- **FIRE EXTINGUISHERS**

Description of General Capabilities

The fire extinguishers are portable, manually operated units and may be used by any employee in case of fire. They consist of Class ABC or BC rated.

Locations

2 fire extinguishers are located in TA-50-69, Indoor Unit (Room 102)

1 fire extinguisher is located at the TA-50-69, Outdoor Unit

- **FIRE ALARM PULL BOXES CONNECTED TO THE CENTRAL ALARM STATION**

Description of General Capabilities

Fire alarms may be activated by any employee in the event of fire to notify the Central Alarm Station. Upon activation, fire alarm horns and strobes provide audible and visual signals for personnel notification. The fire alarm is a pulsing sound.

Locations

Three fire alarm pull stations are located in the TA-50-69, Indoor Unit. Personnel working at the TA-50-69, Outdoor Unit may use the pull stations at TA-50-69 in the event of a fire.

- **AUTOMATIC FIRE SUPPRESSION SYSTEM**

Description of General Capabilities

A wet-pipe automatic sprinkler system that is hydraulically designed for ordinary hazard Group II coverage is in place throughout TA-50-69. This system is activated at 100°C (212°F).

Locations

Throughout TA-50-69, as described above.

- **FIRE HYDRANT**

Description of General Capabilities

Fire hydrants provide water for fire fighting. All fire hydrants are supplied by an 8-inch (in.) water line connected to the 12-in. water main on Pecos Drive.

Location

A fire hydrant is located approximately 55 ft west of TA-50-69.

## **SPILL CONTROL EQUIPMENT**

- **SPILL CONTROL EQUIPMENT**

Description of General Capabilities

The spill control kits may contain items such as absorbents (*i.e.*, pillows and pigs) or weighted tarps. The SEO-3:EM or SEO-1:ER provides additional spill control and clean up equipment as needed.

Spill Control Kit Location

The spill kits are located in TA-50-69 and at the TA-50-69 Outdoor Unit

## **COMMUNICATION EQUIPMENT**

Description of General Capabilities

Telephones for internal and external communication are available for use by employees. Alphanumeric pagers or cellular phones with page/text capabilities are also utilized by employees. Employees can be notified of an emergency situation and appropriate response actions through the use of a text message sent to the pagers, phones, or via two-way radios that may also be utilized for communication. Employees can reach emergency personnel in the time of an emergency through cellular telephones and two-way radios. Fire alarms are activated in the event of a fire. The fire alarm is a double slow whoop sound. When working at the permitted units, personnel will have immediate access to emergency communication equipment either directly or through visual or voice contact with another employee.

Location of Communication Equipment

Personnel working at the permitted units at TA-50-69, will carry cellular phones, pagers, or two-way radios, or will have immediate access to communication equipment through visual or voice contact with another employee.

## **DECONTAMINATION EQUIPMENT**

- **SAFETY SHOWERS**

Description of General Capabilities

Safety showers are available to personnel who receive a chemical splash to the skin.

Location of Safety Showers

A safety shower is located in TA-50-69, Room 102. One standard shower is located adjacent to the change room in TA-50-69.

- **EYEWASHES**

Description of General Capabilities

Eyewashes are available to personnel who receive a chemical splash to the eye(s). Specific SDSs for the chemicals being managed are available hard copy or via online

database to personnel working with hazardous or mixed waste to determine if the application of water is indicated for decontamination.

Location of Eyewashes and Safety Data Sheets

An eyewash is located in the TA-50-69, Indoor Unit (Room 102). A portable eyewash station will be available during active waste management operations at the Outdoor Unit if waste with free liquids is being managed.

- **PERSONAL PROTECTIVE EQUIPMENT**

Appropriate personal protective equipment (PPE) will be worn to protect from hazards found in the workplace under normal conditions. This PPE may include gloves, steel-toed shoes, and safety glasses. Additional PPE may be required during an unusual hazardous situation and may be found in the spill kits at various locations throughout the site.

- **OTHER**

Continuous air monitors, giraffe monitors, or other appropriated air monitoring equipment (as determine by health physics personnel) may be located in the container storage units for detection of airborne radioactive constituents.

**TA-54**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

**TA-54**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

Specific information on emergency response resources and release prevention/mitigation at TA-54 is provided below.

Listings of emergency equipment currently available for use at Area L, Area G, and TA-54 West are presented in Tables D-1 through D-3 below.

**REFERENCES**

LANL, 2002, "Los Alamos National Laboratory General Part B Permit Renewal Application", Revision 2.0, August 2002, LA-UR-03-5923, Los Alamos National Laboratory, Los Alamos, New Mexico

LANL, 2003, "Los Alamos National Laboratory Technical Area 54 Part B Permit Renewal Application", Revision 3.0, June 2003, LA-UR-03-3579, Los Alamos National Laboratory, Los Alamos, New Mexico

**TABLE D-1**  
**TA-54 AREA L**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

Class ABC and BC rated fire extinguishers are located at Area L. Class D rated fire extinguishers are available at Area L if combustible metals are being managed. A dry-pipe sprinkler system is located at TA-54-215.

Dry chemical fire-suppression systems are located in storage sheds TA-54-68, TA-54-69, and TA-54-70.

**Description of General Capabilities:**

Fire extinguishers may be used by any qualified employee in the event of a small fire. The automatic dry-pipe sprinkler system is heat activated. Security personnel and the Los Alamos Fire Department (LAFD) are alerted when this system has been activated.

Fire alarm pull boxes are located inside TA-54-37, TA-54-39, TA-54-51, TA-54-60, TA-54-117, TA-54-210, and TA-54-221.

**Description of General Capabilities:**

Fire alarms may be activated by any employee in the event of a fire to notify the LAFD and security personnel.

Fire hydrants are located near the main site entrance to Area L and at the southeast corner of TA-54-62 inside Area L. These fire hydrants supply water at an adequate volume and pressure to satisfy 40 CFR § 264.32(d).

Freeze-proof faucets are located east of TA-54-31.

**SPILL CONTROL EQUIPMENT**

Spill equipment at TA-54 Area L includes the following:

Shovels

Oversized drums

Absorbent (various locations on site)

Heavy equipment from Area G available for any emergencies at Area L

Spill kits are located throughout Area L. Each kit includes bags of absorbent, caustic neutralizer, acid neutralizer, and an inventory of tools and supplies.

## **COMMUNICATION EQUIPMENT**

Alpha numeric emergency pagers, cellular telephones with page/text capabilities, and/or two-way radios are given to employees working in the area. Personnel will carry cellular telephones, pagers or two-way radios or will have immediate access to communication equipment through visual or voice contact with another employee.

A fire alarm pull box is located at TA-54-215.

Emergency paging system-loud speaker located throughout the site. Evacuation alarms are located adjacent to the fenceline crash gates at Area L, at the northeast end of TA-54-32, the exterior west end of TA-54-215 and at TA-54-62.

Additional equipment includes two-way radios and cellular telephones.

### **Description of General Capabilities:**

External and internal Laboratory communications which may be used in emergency situations are listed.

Fire alarm may be activated by any employee in the event of a fire to notify the LAFD and security personnel.

Employees can be notified of an emergency situation and appropriate response actions through the use of a text message sent on the emergency alpha-numeric pagers or cellular telephones with page/text capabilities.

The evacuation alarm is a pulsating sound that can be heard throughout Area L. The fire alarm is a double slow-whoop sound.

The emergency paging system can be utilized to alert workers of an emergency situation as well as appropriate response actions.

## **DECONTAMINATION EQUIPMENT**

Emergency shower and eyewash stations are located immediately east of TA-54-31, at TA-54-215, at TA-54-39, and outside TA-54-39.

Safety Data Sheets (SDSs) are available hard copy or via online database at the facility.

### **Description of General Capabilities:**

Emergency shower and eyewash stations are used by personnel who receive a chemical splash to the skin or eyes. Specific SDSs for the chemical(s) should be obtained prior to working with the chemical to determine if the application of water is indicated for decontamination.

## **PERSONAL PROTECTIVE EQUIPMENT**

Personnel at Area L are required to use appropriate personal protective equipment (PPE) to protect themselves from the hazards found in the workplace under normal conditions. This PPE

may include gloves, steel-toed shoes, and safety glasses. Additional PPE may be required during an unusual hazardous situation or during sampling activities.

Spill kits throughout Area L may contain PPE items such as: gloves, goggles, safety glasses, coveralls, and face shields.

**Table D-2**  
**TA-54 AREA G**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

ABC and/or BC rated fire extinguishers are available at TA-54-8, TA-54-33, TA-54-48, TA-54-49, TA-54-153, TA-54-224, TA-54-229, TA-54-230, TA-54-231, TA-54-232, TA-54-283, TA-54-375, and TA-54-412, and on Pads 1, 9 and 10.

**Description of General Capabilities:**

These portable, manually operated fire extinguishers may be used by any qualified employee in the event of a small fire. For larger fires, security personnel and the Los Alamos Fire Department (LAFD) are alerted.

Flame or smoke detection equipment and fire alarm pull stations are located within structures at TA-54-229, TA-54-230, TA-54-231, and TA-54-232.

Ultra-violet detectors, smoke and audible devices are located within structure TA-54-153.

Dry-chemical fire suppression systems are available at TA-54-1027, TA-54-1028, TA-54-1030, and TA-54-1041.

A dry-pipe fire suppression system is available at TA-54-412.

Fire alarm pull stations are available at TA-54-33, TA-54-48, TA-54-49, TA-54-153, TA-54-224, TA-54-229, TA-54-230, TA-54-231, TA-54-232, TA-54-283, TA-54-375, and TA-54-412.

**Description of General Capabilities:**

Fire alarms may be activated by any employee in the event of a fire to notify the LAFD and security personnel. Security personnel and LAFD are also notified upon activation of the flame or smoke detectors.

Several fire hydrants are located in Area G. These fire hydrants will supply water at an adequate volume and pressure to satisfy the requirements of 40 CFR 264.32(d)

**SPILL CONTROL EQUIPMENT**

Spill control stations and/or portable spill kits are located at TA-54-8, TA-54-33, TA-54-48, TA-54-49, TA-54-153, TA-54-224, TA-54-229, TA-54-230, TA-54-231, TA-54-232, TA-54-283, TA-54-375, and TA-54-412.

Each spill kit generally includes bags of absorbent and an inventory of tools and supplies.

## **COMMUNICATION EQUIPMENT**

Alpha-numeric emergency pagers are given to employees working in the area. Additional equipment includes portable two-way radios and cellular telephones. Personnel will carry cellular telephones, pagers, to two-way radios or will have immediate access to communication equipment through visual or voice contact with another employee.

Emergency paging system- loud speakers located throughout the site.

Evacuation alarm buttons are located at or near TA-54-33, TA-54-48, TA-54-49, TA-54-153, TA-54-224, TA-54-229, TA-54-230, TA-54-231, TA-54-232, TA-54-283, TA-54-375, TA-54-412, Pads 1, 9 and 10 and at various muster stations.

### **Description of General Capabilities:**

Loud speakers, paging telephones equipped with public address capabilities, and alarms located throughout Area G can be used to notify personnel of an emergency. The emergency paging system can also be utilized to alert workers of appropriate response actions. Evacuation alarms have horns mounted on telephone poles throughout Area G that emit an audible alarm that can be heard throughout Area G. Employees can also be notified of an emergency situation and appropriate response action through the use of a text message sent on the emergency alpha-numeric pagers or cellular telephone, or by two-way radio.

## **DECONTAMINATION EQUIPMENT**

Portable eyewash stations are located at permitted units located at TA-54 Area G during waste management operations involving free liquids.

One permanent, hard-plumbed eyewash station and a safety shower is located in TA-54-33.

Safety Data Sheets (SDSs) are available hard copy or via online database.

### **Description of General Capabilities:**

Emergency shower and eyewash stations are used by personnel who receive a chemical splash to the skin or eyes. Specific SDSs for the chemical(s) being managed should be obtained prior to working with hazardous or mixed waste to determine if the application of water is indicated for decontamination.

## **PERSONAL PROTECTIVE EQUIPMENT**

Personnel at Area G are required to use appropriate personal protective equipment (PPE) to protect themselves from the hazards found in the workplace under normal conditions. This PPE may include gloves, steel-toed shoes, and safety glasses. Additional PPE may be required during an unusual hazardous situation and can be found in the spill kits or at various locations throughout the site.

**OTHER**

Continuous air monitors and giraffe monitors (or other appropriate air monitoring equipment) are located in many of the container storage units for detection of airborne radioactive constituents.

Heavy equipment available on site includes:

- Scraper
- Back hoe
- Bulldozer
- Front-end loader

Vehicles available to evacuate personnel from Area G include:

- All-terrain vehicles
- Pickup truck
- Flat-bed truck
- Micro trucks
- Vans

**TABLE D-3**  
**TA-54 WEST**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

ABC and/or BC fire extinguishers are available at TA-54-38 in the high and low bays and at the outdoor container storage unit.

Description of General Capabilities:

Fire extinguishers may be used by any employee in the event of a small fire. Security personnel and the Los Alamos Fire Department (LAFD) are alerted when the automatic dry-pipe sprinkler system has been activated.

A pre-action sprinkler system is available throughout TA-54-38, including the loading dock area. The sprinkler system is activated by loss of nitrogen pressure (e.g., an open sprinkler) anywhere in the system or by heat detection in the high bay and at the loading dock and by smoke detection in the remainder of the building.

Fire alarm pull boxes are available inside TA-54-38 at the main entrance, in the high bay, and in the low bay.

Description of General Capabilities:

Fire alarms may be activated by any employee in the event of a fire to notify the LAFD and security personnel.

A fire hydrant is located west of TA-54-38 near the entrance to TA-54 West. This fire hydrant supplies water at adequate volume and pressure to satisfy 40 CFR § 264.32(d).

A wall hydrant is located on the west side of TA-54-38.

Freeze-proof faucets are located on the west, south, and east sides of TA-54-38.

**SPILL CONTROL EQUIPMENT**

A mobile response kit is located at TA-54-38. The kit includes absorbent socks, pillows, and sheets; goggles; and large plastic bags.

**COMMUNICATION EQUIPMENT**

Evacuation alarm buttons are located at the high bay, the low bay, and the main entrance to TA-54-38.

Public address (PA) capabilities are located in TA-54-38 in the high bay, in the low bay, and outside the main entrance.

Alpha-numeric emergency pagers are given to employees working in the area.

Additional equipment includes portable two-way radios and cellular phones. Personnel will carry cellular telephones, pagers, or two-way radios or will have immediate access to communication equipment through visual or voice contact with another employee.

Description of General Capabilities:

PA capabilities for internal communication are available for use by any employee. Employees can be notified of an emergency situation and appropriate response actions through the use of a text message sent on the emergency alpha-numeric pagers, cellular telephones, or by two-way radio. The evacuation alarm can be heard throughout TA-54-38. The fire alarm is a double slow-whoop sound. Fire and evacuation alarms are activated in the event of a fire or evacuation. The emergency PA can be utilized to alert workers of an emergency situation as well as appropriate response actions.

**DECONTAMINATION EQUIPMENT**

Safety showers and portable eyewash stations are located in TA-54-38 in the high bay and on the loading dock. The portable eyewash stations will be present during active waste management operations involving free liquids at these locations.

Safety Data Sheets (SDSs) are available hard copy or via online database.

Description of General Capabilities:

Safety showers and eyewashes are used by personnel who receive a chemical splash to the skin or to the eyes. Specific SDSs for the chemical(s) being managed should be obtained prior to working with mixed waste to determine if the application of water is indicated for decontamination.

**PERSONAL PROTECTIVE EQUIPMENT**

Personnel at TA-54 West are required to use appropriate personal protective equipment (PPE) to protect themselves from the hazards found in the workplace under normal conditions. This PPE includes gloves, steel-toed shoes, and safety glasses. Additional PPE may be required during an unusual hazardous situation and can be found in the spill kits or at various locations throughout the site or at adjacent TA-54 facilities.

Gloves and goggles are found in the spill kits located at TA-54-38.

All workers located within the operating limits of a crane (fixed or mobile) wear hard hats.

**TA-55**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

**TA-55**  
**ATTACHMENT D**  
**CONTINGENCY PLAN**

Specific information on emergency response resources and release prevention/mitigation at TA-55 is provided below.

Emergency equipment currently available for use at TA-55 are included as Tables D-1 through D-4 in this Attachment. A list of emergency equipment (including spill control equipment) available from the TA-55 Emergency Management Team is presented in Table D-1 of this Attachment's General Section. Emergency equipment discussed in this Plan may be replaced and/or upgraded with functionally equivalent components and equipment as necessary for routine maintenance and repairs.

Hazardous waste spills are managed by type and severity of the incident. If a hazardous waste spill occurs, the facility line management evaluates the type and severity of the spill and determines if assistance from SEO-3:EM and the SEO-3:EM Duty Officer is required. If not, the spill is managed internally by TA-55 personnel.

**Table D-1**  
**TA-55 Building 4, First Floor**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

Dry-chemical fire extinguishers are located in Room 401.

Description of General Capabilities:

The fire extinguishers are portable, manually-operated units and can be used by any employee in case of fire. The fire extinguishers in Room 401 are for use only in case of fire outside the gloveboxes.

Fire alarm pull boxes and push button stations are available in Room 401.

Description of General Capabilities:

Fire alarms can be activated by any employee in the event of fire to notify the Central Alarm Station.

An automatic fire suppression sprinkler system is located in Room 401.

Automatic thermal alarms are located in the gloveboxes in Room 401.

Fire hydrants are located outdoors on the north, south, and west sides of TA-55-4.

**SPILL CONTROL EQUIPMENT**

Room 401 provides secondary containment for the storage tank system and cementation unit.

**COMMUNICATION EQUIPMENT**

Telephones are located in Room 401. The telephones are capable of handling incoming/outgoing calls and paging.

A telephone is located at each of the two west exit doors of TA-55-4.

Two-way radios are available from the TA-55 Operations Center located at TA-55, Building 0004, Room 218, for personnel working in Room 401.

Alarms at TA-55-4:

The fire alarm is a zone-wide whooping sound. If a drop-box pushbutton station is used, a zone-wide, high-pitched constant tone will be activated and then switch to the standard whooping sound.

The evacuation alarm is a facility-wide mid-range pulsating tone.

The continuous air monitor alarm is a local high-pitched pulsating tone.

The ventilation alarm is a local slow, repeating chime tone.

The public address system may also be used to announce an evacuation.

### **DECONTAMINATION EQUIPMENT**

Safety showers and eyewash stations are located in Room 401.

#### **Description of General Capabilities:**

Safety showers and eyewashes are available for decontamination of personnel who receive a chemical splash to the skin or eyes.

Electronic versions of Safety Data Sheets (SDSs) are available in Room 401 and at TA-55-4, the TA-55 Operations Center located at TA-55, Building 0004, Room 218, for personnel working in Room 401.

Specific SDSs may be obtained prior to working with any hazardous waste to determine if the application of water is indicated for decontamination.

### **PERSONAL PROTECTIVE EQUIPMENT**

Self-contained breathing apparatus (SCBA) are located in the southside hallway outside of Room 401, in the northside hallway of TA-55-4, and in TA-55-3, Room 179. The SCBAs are available for personnel working in or near Room 401.

Change/decontamination rooms with protective clothing available are located on the first floor of TA-55-4 and in TA-55-3. Protective clothing is also available in a locker located in the hallway near Room 401 for use by personnel working in or near Room 401.

Respirators located in TA-55-3 (Room 107) and in TA-55-4 (Room 515) are available for all personnel working in or near TA-55-4. Respirators are re-issued on a regular basis to TA-55-4 personnel for radiation work. These respirators are stored in the personnel's individual lockers. Combination gas canisters (particulate, organic, and acid) are available in TA-55-4 (Room 515).

### **OTHER:**

If transportation is needed for evacuation, vehicles may be obtained through the SEO-3:EM or SEO-1:ER.

**TABLE D-2**  
**TA-55 Building 4 Basement**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

Halon, dry chemical, and/or carbon dioxide fire extinguishers are available near B40, B05, K13, B45, and the Vault.

Description of General Capabilities:

The fire extinguishers are portable, manually-operated units and can be used by any employee in case of fire.

Fire alarm pull boxes are located at B05, K13, B45, the Vault, and on each side of the fire door.

Description of General Capabilities:

Fire alarms can be activated by any employee in the event of fire to notify the Central Alarm System.

An automatic fire suppression sprinkler system is located throughout the basement at TA-55-4, including the Vault and the office and corridor associated with the Vault.

Fire hydrants are located outdoors on the north, south, and west sides of TA-55-4.

**SPILL CONTROL EQUIPMENT**

Self-containment pallets or cabinets are provided for containers of liquid and/or potentially liquid-bearing wastes stored at B40, K13, and the Vault.

**COMMUNICATION EQUIPMENT**

Telephones and intercom stations are located throughout the basement of TA-55-4. The telephones are capable of handling both incoming and outgoing calls. The intercom system is connected to the TA-55-4 Operations Center and allows the Operations Center to easily mobilize emergency response support.

Two-way radios are available from the TA-55 Operations Center located at TA-55, Building 0004, room 218, for personnel working in the basement at TA-55-4.

Personal pagers are issued to and carried by assigned personnel working in the basement of TA-55-4. These pagers are accessed by telephone.

Alarms at TA-55-4:

The fire alarm is an area-wide whooping sound.

The evacuation alarm is a facility-wide mid-range pulsating tone.

The continuous air monitor alarm is a local high-pitched pulsating tone.

The ventilation alarm is a local slow, repeating chime tone.

The public address system activated from the TA-55-4 Operations Center may be used to announce an evacuation.

A site-wide paging system activated from the TA-55-4 Operations Center can be heard throughout TA-55-4.

### **DECONTAMINATION EQUIPMENT**

Eyewashes are located throughout the basement of TA-55-4.

#### **Description of General Capabilities:**

The eyewash stations are available for decontamination of personnel who receive a chemical splash to the eyes.

Safety showers are located near B40, K13 and in the office for the Vault.

#### **Description of General Capabilities:**

The safety showers are available for decontamination of personnel who receive a chemical splash to the skin.

Safety Data Sheets (SDSs) are available at TA-55-4. Specific SDSs may be obtained prior to working with any hazardous waste to determine if the application of water is indicated for decontamination.

### **PERSONAL PROTECTIVE EQUIPMENT**

Change/decontamination rooms with protective clothing available are located on the first floor of TA-55-4 and in TA-55-3.

Respirators located in TA-55-4 and in TA-55-3 are available for all personnel working in or near TA-55-4. Particulate and toxic gas canisters are available in TA-55-4.

Self-contained breathing apparatus are located in the TA-55, Basement.

### **OTHER:**

If transportation is needed for evacuation, vehicles may be obtained through the SEO-3:EM or SEO-1:ER.

Forklifts stored in the basement are available for use in the basement and are stored near the north basement doorway.

**TABLE D-3**  
**TA-55 CONTAINER STORAGE PAD**  
**Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

A dry chemical fire extinguisher is located on the Container Storage Pad.

Description of General Capabilities:

The fire extinguishers are portable, manually-operated units and can be used by any employee in case of fire.

Fire hydrants are located along the north, south, and west sides of TA-55-4.

One fire hydrant is located just south of the Container Storage Pad.

Fire alarm pull boxes are located in TA-55-42 at the northwest corner of TA-55-4.

One fire alarm pull box is located outside on the south side of TA-55-4.

**COMMUNICATION EQUIPMENT**

A telephone is located on the east side of TA-55-11, and additional phones are located on the south side of TA-55-4.

Two-way radios are available from the TA-55 Operations Center located at TA-55, Building 0004, Room 218, for personnel working at the Container Storage Pad.

Personal pagers are issued to and carried by assigned personnel working at the Container Storage Pad. These pagers are accessed by telephone.

Alarms at TA-55:

The fire alarm is an area-wide whooping sound.

The evacuation alarm is a facility-wide mid-range pulsating tone.

The public address (PA) system activated from the TA-55-4 Operations Center may be used to announce an evacuation. PA speakers are located on the west side of TA-55-4.

Two intercom systems to the TA-55-4 Operations Center are located on the south and north sides of TA-55-4.

**DECONTAMINATION EQUIPMENT**

A safety shower and eyewash station are located outdoors on the Container Storage Pad.

**Description of General Capabilities:**

The safety shower and eyewash are available for personnel who receive a chemical splash to the skin or eyes.

Safety Data Sheets (SDSs) are available at TA-55-2. Specific SDSs may be obtained prior to working with any hazardous waste to determine if the application of water is indicated for decontamination.

**PERSONAL PROTECTIVE EQUIPMENT**

Change rooms with protective clothing available are located on the first floor of TA-55-4 and in TA-55-3.

Respirators are located in TA-55-4 and in TA-55-3 for all personnel working in or near TA-55-4.

**OTHER:**

If transportation is needed for evacuation, vehicles may be obtained through SEO-3:EM or SEO-1:ER. Two forklifts are available for NPI-7 use.

**TABLE D-4**

**TA-63 Transuranic Waste Facility  
Emergency Equipment**

---

**FIRE CONTROL EQUIPMENT**

ABC and/or BC rated fire extinguishers are available at TA-63-145, TA-63-149, TA-63-150, TA-63-151, TA-63-152, TA-63-153, TA-63-154, TA-63-155, TA-63-156, and TA-63-157.

**Description of General Capabilities:**

These portable, manually operated fire extinguishers may be used by any qualified employee in the event of a small fire. For larger fires, security personnel and the Los Alamos Fire Department (LAFD) must be alerted.

Flame or smoke detection equipment and fire alarm pull stations are located within structures at TA-63-149, TA-63-150, TA-63-151, TA-63-152, TA-63-153, and TA-63-154.

Dry-pipe fire suppression systems are available at TA-63-149, TA-63-150, TA-63-151, TA-63-152, TA-63-153, and TA-63-154.

Fire alarm pull stations are available at TA-63-145, TA-63-149, TA-63-150, TA-63-151, TA-63-152, TA-63-153, TA-63-154, TA-63-155, TA-63-156, and TA-63-157.

**Description of General Capabilities:**

Fire alarms may be activated by any employee in the event of a fire to notify the LAFD and security personnel. Security personnel and LAFD are also notified upon activation of the flame or smoke detectors.

Two fire hydrants are located in TWF. These fire hydrants supply water at an adequate volume and pressure to satisfy the requirements of 40 CFR 264.32(d)

**SPILL CONTROL EQUIPMENT**

Spill control stations and/or portable spill kits are located at TA-63-145, TA-63-149, TA-63-150, TA-63-151, TA-63-152, TA-63-153, TA-63-154, TA-63-155, TA-63-156, and TA-63-157. Each spill kit generally includes bags of absorbent and an inventory of tools and supplies.

## **COMMUNICATION EQUIPMENT**

Telephones and the public address system are located inside the Operations Support Building.

### **Description of General Capabilities:**

Telephones for internal and external communication are available for use by any employee. Employees can be notified of an emergency situation and appropriate response action through the public address system.

Fire alarm pull stations are located in the storage buildings, the receiving canopy, and at operations support building.

### **Description of General Capabilities:**

Manually-operated fire alarms may be activated by any employee in the event of a fire to alert TWF site personnel, LANL Emergency Response Personnel, and the LAFD.

Fire and public address system alarms

### **Description of General Capabilities:**

The fire and public address system are activated or used to provide a sound signal to alert personnel of fires or the need to clear the area.

## **DECONTAMINATION EQUIPMENT**

Eyewash/emergency shower stations and SDSs are available in the storage buildings and the Operation Support Building. SDS information is maintained where appropriate for personnel accessibility and are used for chemicals that will be needed to support operations or emergency activities.

### **Description of General Capabilities:**

Eyewashes and emergency showers may be used by personnel who receive a chemical splash to the eyes or body. Specific SDSs should be reviewed prior to working with chemicals.

## **PERSONAL PROTECTIVE EQUIPMENT**

Personnel at TWF are required to use appropriate personal protective equipment (PPE) protect themselves from hazards found under normal conditions. This PPE may include gloves, steel toe shoes, and eye protection, additional PPE may be required during unusual hazardous situations. First aid kits and hearing protection are also available.

■ Description of General Capabilities:

To prevent undue exposure of personnel to hazardous or mixed waste, personal protective equipment (PPE) appropriate for the waste containers being managed is worn by all on-site personnel at the TWF (see section 2.5.6). First aid kits may be used by personnel who sustain minor injuries at the unit in the course of operations. Hearing protection may be used by operations personnel to mitigate noise impacts.

### **Training**

# MSGP Corrective Actions

## Environmental Protection & Compliance – Compliance Programs (EPC-CP)

EST. 1943  
Operated by Los Alamos National Security, LLC for NNSA.

UNCLASSIFIED

Slide 1

# Agenda

---

- Definition of Corrective Action
- What triggers a corrective action
- Examples of issues requiring corrective actions
- Timeframes to address corrective actions
- 45 Day Extension
- Corrective action process
- Results of initial inspection
- Suggestions
- Expectations and questions
- Request for other topics

## Corrective Action

---

**Definition:** “Any action taken, or required to be taken, to

- (1) repair, modify, or replace any stormwater control used at the site;
- (2) clean up and dispose of spills, releases, or other deposits found on the site;
- (3) remedy a permit violation.

## What Triggers A Corrective Action?

---

- Unauthorized release or discharge
- Discharge that violated a numeric effluent limit
- Control measures that are not stringent enough to ensure stormwater discharges meet Water Quality Standards.
  - These are the threshold values in your SWPPPs
- Visual assessment that shows evidence of stormwater pollution (e.g., color, odor, floating solids, settled solids, suspended solids, foam)
- Failure to meet any permit condition or those specified in the site specific SWPPP

EST. 1943  
Operated by Los Alamos National Security, LLC for NNSA

UNCLASSIFIED

Slide 4

## Examples of Issues Requiring Corrective Action

## Examples of Issues Requiring Corrective Action (continued)

## Timeframes to address new corrective actions

---

- Shall Immediately take action upon identification of an issue
  - Immediately is the same day a condition is found
  - If found after 3:00 pm, action must be taken the next work day
- If follow-up action is needed – before the next storm event or within 14 calendar days
- If finalization of CA is not feasible within 14 days the following is required
  - Documentation of why it is not feasible to close the CA within this timeframe
  - A formal schedule for completion of the action A.S.A.P. but no longer than 45 days after discovery

## 45 Day Extension

---

- If a CA is expected to exceed the 45 day timeframe (as identified above) the DEP shall provide ENV-CP the following information
  - Rationale for an extension (e.g., a defensible position that does not put LANS at risk)
  - Provide a realistic completion date
  - Take the minimum additional time necessary to complete the corrective action.
- Where a corrective action results in a change to any control measure or procedure the SWPPP must be modified within 14 calendar days of the day the CA was closed.

## Corrective Action Process

- Identification of an issue either during routine operations or during an inspection
  - Notify the Deployed Environmental Professional
  - Take immediate action
  - Record the issue and corrective action
    - Enter the issue into the MSGP Corrective Action Report (CAR) Database
    - Propose a completion date
    - System notifies FOD, DSESH Manager, and ENV-CP of new CA
  - Follow-up and completion of corrective action
    - Perform work and record completed activities and date of completion in the database
    - Database automatically sends e-mail notifications to key personnel every 30 days until corrective actions are closed (process may change/compress in the future)

## Corrective Action Process (continued)

- Follow-up and completion of corrective action (continued)
  - If CA is expected to exceed 14 days, enter a schedule for completion in the database
  - At about day 30, ENV-CP will be contacting the DEP for the following information:
    - Rationale for a 45 day extension
    - Realistic completion date taking the minimum amount of time necessary
  - Letter will be sent to Region 6 EPA **prior** to the 45<sup>th</sup> day.
  - ENV-CP will track progress according to the schedule provided in the 45 day extension letter
  - If timeframes in the letter are exceeded, it is a permit non-compliance.

EST. 1943  
Operated by Los Alamos National Security, LLC for NNSA

UNCLASSIFIED

Slide 10

Slide 10

UNCLASSIFIED

477

## Results of initial inspection

- Started with 40 corrective actions with potential to exceed 45 day timeframe
- Corrective action initiated well into the 45-day period (not started immediately)
- Three CA's reported to Region 6 EPA with rationale and completion dates.
  - Took numerous phone calls and discussions up the management chain to the AD level to accomplish this
  - Not efficient use of resources
  - Must strive for proactivity, not reactivity
- One was closed within identified timeframe
- One has exceeded the completion date reported to EPA
- One must be addressed by this Friday
- EPA will consider the appropriateness and promptness of corrective action in determining enforcement response to permit violations

EST. 1943  
Operated by Los Alamos National Security, LLC for NNSA

UNCLASSIFIED

Slide 11

UNCLASSIFIED

## Suggestions for Improvements?

- How does the institution speed up the corrective action process?
  - Improve the FSR system?
    - Flag compliance driven work
    - Allow compliance driven work to move through system without cost code or automatically be assigned a specific cost code
  - Use Maintenance Connection to push out work order to DEPs with deadline and notification to managers
  - What are the barriers you face in taking immediate action and/or completing work within 14 days?
    - How do we improve this? Ideas?

## Expectations

- Be timely and diligent in implementing 2015 MSGP requirements at your facilities
  - *Plan ahead for budget & resources*
- Look for opportunities to streamline and improve processes
- Ask for help
