NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

NOTE This entire attachment is to be treated as Surveillance Requirement implementing actions.

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

SR 4.4.1.1, The OPERABILITY acceptance criterion for this surveillance is:
The FLAMMABLE GAS detector in the FSTF FLAMMABLE GAS SOURCE storage cabinet is exposed to the ambient atmosphere in the storage cabinet. The gas concentration readout directly on the detector in the storage cabinet is compared with the gas concentration readout on the system control and alarm panel. The difference between the two readings is checked to VERIFY it is in the range of (≥-0.1; ≤0.1).

1.0 PRE-MAINTENANCE ACTIVITIES

NOTE Preoperational and pre-maintenance activities shall be conducted per the work order package, e.g., lockout/tagout, permits, special instructions, etc.

! WARNING If purging of gas lines will be required during this maintenance, ensure that the purging activity is addressed in the Integrated Work Document (IWD). The following must be addressed (see Master Specification 23 1123):

1. Purged fuel gases shall be directly vented to a safe location outdoors, away from personnel and ignition sources. This may be accomplished through permanent piping or temporary piping or hosing.
2. If it is not possible to vent purged gases outdoors, the following conditions must be met:
   a. Purging activity must be approved by the LANL Fire Marshal based on a documented justification detailing why outdoor venting is not possible and IWD.
   b. Gas concentration in the space to which the purge is vented shall be maintained at no more than 25% of the Lower Explosive Limit (LEL). For natural gas, the LEL is a concentration of 5% in air or 50,000 ppm. Therefore a maximum concentration of 12,500 ppm is allowed for natural gas. The concentration may be controlled by providing adequate ventilation or by limiting the amount of purge gas.
   c. Combustible gas detectors shall be used during the purging operation to monitor the gas concentration.
   d. Nonessential personnel shall be evacuated from the vicinity (including adjacent spaces) during the purging operation.
   e. Ignition sources in the purging space shall be controlled or eliminated.

NOTE All repair work, adjustments, or the replacement of parts shall be done in accordance with the manufacturer's procedures, specifications, recommendations, and instructions.

SECTION VI – DEFICIENCIES SUMMARY

1) No manually operated remote shutdown switch installed at the boiler room door as per ASME CSD-1, CE-110(b).
2) There are some discrepancies between the H-3 Manufacture's Data Report and the boiler itself it regards to the number of safety valve openings. The data report is only calling out one opening when there is two on the boiler.

SECTION VII – RECOMMENDATIONS

1) Install a manually operated remote shutdown switch at the boiler room door, and install signage that identifies switch as emergency shutoff.
2) Reach out to the manufacture to get an amended Manufacture Data Report.

CE-100 ELECTRICAL REQUIREMENTS

(21) CE-110 General

Installation requirements shall apply to controls, safety devices, and burners on automatically fired boilers covered by this Standard.

For information regarding boiler and/or burner installations, refer to local codes. In the absence of local codes, see NFPA 70.

(a) A disconnecting means capable of being locked in the open position shall be installed at an accessible location at the boiler so that the boiler can be disconnected from all sources of potential. This disconnecting means shall be an integral part of the boiler or adjacent to it.

(b) A manually operated remote shutdown switch or circuit breaker shall be located just outside the boiler room door and marked for easy identification.

(1) Consideration should be given to the type and location of the remote shutdown switch to safeguard against tampering. If the boiler room door is on the building exterior, the switch should be located just inside the door. If there is more than one door to the boiler room, there should be a remote shutdown switch located at each door.

(2) Activation of the remote shutdown switch or circuit breaker shall immediately shut off the fuel or energy supply.

(3) For installations not in a boiler or equipment room, such as outdoors at ground level or on roof top, the manually operated remote shutdown switch(es) or circuit breaker(s) shall be accessible and located at a safe distance as defined by the authority having jurisdiction.

(c) All uninsulated live metal parts and all rotating or moving parts that may cause injury shall be guarded to avoid accidental contact.

(d) The electrical equipment shall be arranged so that failure of this equipment will cause the fuel supply to shut off.

(e) The power supply to the electrical control system shall be from a two-wire branch circuit that has a grounded conductor; otherwise, an isolation transformer with a two-wire secondary shall be provided. When an isolation transformer is provided, one side of the secondary winding shall be grounded. Control voltage shall not exceed 150 nominal volts, line to line.

(1) One side of all coils shall be electrically located in the grounded side of the circuit. All switches, contacts, and overcurrent devices shall be electrically located in the ungrounded or "hot" side of the circuit.

(2) All electrical contacts of every safety device installed in the same control circuit shall be electrically connected in series.

(f) All electrical components and devices shall have a voltage rating commensurate with the supply voltage of the control system.

(g) All electrical components and devices shall be provided with an electrical enclosure that is at least NEMA Type 1 (general purpose). Where electrical devices will be subject to dripping moisture, the enclosures shall be at least NEMA Type 2 (drip-tight).

(h) All electrical control devices shall be labeled and listed.

(i) The design of the control circuits shall be such that limit and primary safety controls shall directly open a circuit that interrupts the supply of fuel to combustion units.

(j) Automatic resetting devices, controls, or switches shall be installed in accordance with the instructions of the combustion safeguard control manufacturer. No automatic resetting device, control, or switch shall be installed in the wiring between the load side (terminal) of the primary or programming control and the main or ignition fuel valve or valves. This does not preclude the installation of manually operated test switches for the purposes of testing tight closure of individual fuel valves.

CE-120 Overcurrent Protection

(a) Conductors for interconnecting wiring that is smaller than the supply conductors shall be provided with overcurrent protection based on the size of the smallest interconnecting conductors external to any control box.

(b) Overcurrent protection for interconnecting wiring shall be located at the point where the smaller conductors connect to the larger conductors. However, overall overcurrent protection is acceptable if it is sized on the basis of the smallest conductors of the interconnecting wiring.

(c) Overcurrent protection devices shall be accessible, and their function shall be identified.

1.0 PRE-MAINTENANCE ACTIVITIES

NOTE Preoperational and pre-maintenance activities shall be conducted per the work order package, e.g., lockout/tagout, permits, special instructions, etc.

! WARNING If purging of gas lines will be required during this maintenance, ensure that the purging activity is addressed in the Integrated Work Document (IWD). The following must be addressed (see Master Specification 23 1123):

1. Purged fuel gases shall be directly vented to a safe location outdoors, away from personnel and ignition sources. This may be accomplished through permanent piping or temporary piping or hosing.
2. If it is not possible to vent purged gases outdoors, the following conditions must be met:
   a. Purging activity must be approved by the LANL Fire Marshal based on a documented justification detailing why outdoor venting is not possible and IWD.
   b. Gas concentration in the space to which the purge is vented shall be maintained at no more than 25% of the Lower Explosive Limit (LEL). For natural gas, the LEL is a concentration of 5% in air or 50,000 ppm. Therefore a maximum concentration of 12,500 ppm is allowed for natural gas. The concentration may be controlled by providing adequate ventilation or by limiting the amount of purge gas.
   c. Combustible gas detectors shall be used during the purging operation to monitor the gas concentration.
   d. Nonessential personnel shall be evacuated from the vicinity (including adjacent spaces) during the purging operation.
   e. Ignition sources in the purging space shall be controlled or eliminated.

NOTE All repair work, adjustments, or the replacement of parts shall be done in accordance with the manufacturer's procedures, specifications, recommendations, and instructions.

1.0 PRE-MAINTENANCE ACTIVITIES

NOTE Preoperational and pre-maintenance activities shall be conducted per the work order package, e.g., lockout/tagout, permits, special instructions, etc.

! WARNING If purging of gas lines will be required during this maintenance, ensure that the purging activity is addressed in the Integrated Work Document (IWD). The following must be addressed (see Master Specification 23 1123):

1. Purged fuel gases shall be directly vented to a safe location outdoors, away from personnel and ignition sources. This may be accomplished through permanent piping or temporary piping or hosing.
2. If it is not possible to vent purged gases outdoors, the following conditions must be met:
   a. Purging activity must be approved by the LANL Fire Marshal based on a documented justification detailing why outdoor venting is not possible and IWD.
   b. Gas concentration in the space to which the purge is vented shall be maintained at no more than 25% of the Lower Explosive Limit (LEL). For natural gas, the LEL is a concentration of 5% in air or 50,000 ppm. Therefore a maximum concentration of 12,500 ppm is allowed for natural gas. The concentration may be controlled by providing adequate ventilation or by limiting the amount of purge gas.
   c. Combustible gas detectors shall be used during the purging operation to monitor the gas concentration.
   d. Nonessential personnel shall be evacuated from the vicinity (including adjacent spaces) during the purging operation.
   e. Ignition sources in the purging space shall be controlled or eliminated.

NOTE All repair work, adjustments, or the replacement of parts shall be done in accordance with the manufacturer's procedures, specifications, recommendations, and instructions.

SECTION VI – DEFICIENCIES SUMMARY

1) No manually operated remote shutdown switch installed at the boiler room door as per ASME CSD-1, CE-110(b).
2) There are some discrepancies between the H-3 Manufacture's Data Report and the boiler itself it regards to the number of safety valve openings. The data report is only calling out one opening when there is two on the boiler.

SECTION VII – RECOMMENDATIONS

1) Install a manually operated remote shutdown switch at the boiler room door, and install signage that identifies switch as emergency shutoff.
2) Reach out to the manufacture to get an amended Manufacture Data Report.

CE-100 ELECTRICAL REQUIREMENTS

(21) CE-110 General

Installation requirements shall apply to controls, safety devices, and burners on automatically fired boilers covered by this Standard.

For information regarding boiler and/or burner installations, refer to local codes. In the absence of local codes, see NFPA 70.

(a) A disconnecting means capable of being locked in the open position shall be installed at an accessible location at the boiler so that the boiler can be disconnected from all sources of potential. This disconnecting means shall be an integral part of the boiler or adjacent to it.

(b) A manually operated remote shutdown switch or circuit breaker shall be located just outside the boiler room door and marked for easy identification.

(1) Consideration should be given to the type and location of the remote shutdown switch to safeguard against tampering. If the boiler room door is on the building exterior, the switch should be located just inside the door. If there is more than one door to the boiler room, there should be a remote shutdown switch located at each door.

(2) Activation of the remote shutdown switch or circuit breaker shall immediately shut off the fuel or energy supply.

(3) For installations not in a boiler or equipment room, such as outdoors at ground level or on roof top, the manually operated remote shutdown switch(es) or circuit breaker(s) shall be accessible and located at a safe distance as defined by the authority having jurisdiction.

(c) All uninsulated live metal parts and all rotating or moving parts that may cause injury shall be guarded to avoid accidental contact.

(d) The electrical equipment shall be arranged so that failure of this equipment will cause the fuel supply to shut off.

(e) The power supply to the electrical control system shall be from a two-wire branch circuit that has a grounded conductor; otherwise, an isolation transformer with a two-wire secondary shall be provided. When an isolation transformer is provided, one side of the secondary winding shall be grounded. Control voltage shall not exceed 150 nominal volts, line to line.

(1) One side of all coils shall be electrically located in the grounded side of the circuit. All switches, contacts, and overcurrent devices shall be electrically located in the ungrounded or "hot" side of the circuit.

(2) All electrical contacts of every safety device installed in the same control circuit shall be electrically connected in series.

(f) All electrical components and devices shall have a voltage rating commensurate with the supply voltage of the control system.

(g) All electrical components and devices shall be provided with an electrical enclosure that is at least NEMA Type 1 (general purpose). Where electrical devices will be subject to dripping moisture, the enclosures shall be at least NEMA Type 2 (drip-tight).

(h) All electrical control devices shall be labeled and listed.

(i) The design of the control circuits shall be such that limit and primary safety controls shall directly open a circuit that interrupts the supply of fuel to combustion units.

(j) Automatic resetting devices, controls, or switches shall be installed in accordance with the instructions of the combustion safeguard control manufacturer. No automatic resetting device, control, or switch shall be installed in the wiring between the load side (terminal) of the primary or programming control and the main or ignition fuel valve or valves. This does not preclude the installation of manually operated test switches for the purposes of testing tight closure of individual fuel valves.

CE-120 Overcurrent Protection

(a) Conductors for interconnecting wiring that is smaller than the supply conductors shall be provided with overcurrent protection based on the size of the smallest interconnecting conductors external to any control box.

(b) Overcurrent protection for interconnecting wiring shall be located at the point where the smaller conductors connect to the larger conductors. However, overall overcurrent protection is acceptable if it is sized on the basis of the smallest conductors of the interconnecting wiring.

(c) Overcurrent protection devices shall be accessible, and their function shall be identified.

Natural Gas

Section 1 - Product and Company Identification

Product Name: Natural Gas	
Recommended Use: Fuel	**Restrictions On Use:** None known
Manufacturer's Name: Southern California Gas Company	**Emergency Telephone Number:** Residential (800) 427-2200 Commercial/Industrial (800) 427-2000

Section 2 - Hazardous Ingredients

Physical Hazards: Flammable Gas Category 1 Gases Under Pressure Compressed Gas Category 1	**Health Hazards:** Simple Asphyxiant

Label Elements:
Danger!

Hazard Phrases:
Extremely flammable gas.
Contains gas under pressure; may explode if heated.
May displace oxygen and cause rapid suffocation.

Precautionary Phrases:
Keep away from unintended heat, sparks, open flames and hot surfaces. No smoking.
Leaking gas fire: Do not extinguish, unless leak can be stopped safely.
Eliminate all ignition sources if safe to do so.
Protect from sunlight.
Store in a well-ventilated place.

Section 3 - Composition / Information on Ingredients

Chemical Component	CAS #	Percentage by Volume
Methane	74-82-8	80-99%
Ethane	74-84-0	0.1-12%
Propane	74-98-6	0-5%
n-Butane	106-97-8	0-1.5%
Carbon Dioxide	124-38-9	0-3%

Note: Within Southern California Gas Company's service territory, the composition will vary by location. The listed concentrations are approximate ranges. Odorant, at trace amounts, may be comprised of some or all of the following components and/or blends thereof: Tetrahydrothiophene, tertiary-Butyl Mercaptan and/or other mercaptans.

Section 4 - First Aid Measures

Inhalation: If respiratory symptoms occur, remove to fresh air. If breathing has stopped, give artificial respiration. If breathing is difficult have qualified personnel administer oxygen. Get medical attention.
Eye Contact: If irritation or redness develops from exposure, flush eyes with clean water. Seek medical attention if symptoms persist.
Skin Contact: Not known to be a skin irritant. Skin absorption is unlikely. Good practice to wash any chemical from skin.
Ingestion: This product is a gas. Under normal atmospheric conditions, ingestion is unlikely.

Section 5 - Fire-Fighting Measures

Suitable Extinguishing Media: Carbon dioxide, dry chemical, or halon. Water may be ineffective on flames but useful for other purposes; including cooling heated surfaces or preventing the creation of static electricity.
Specific Hazards Arising from the Chemical:
Gas is extremely flammable and may readily be ignited by static charge, sparks and flames. A hazard from re-ignition and explosion exists if the flame is extinguished without stopping flow of gas and/or cooling surroundings and eliminating ignition source. Gas may travel a considerable distance to a source of ignition and flash back. Combustion may produce carbon dioxide and water with trace amounts of carbon monoxide, nitrogen oxides, sulfur oxides, aldehydes and soot.
Protection of Firefighters:
For fires involving this material, do not enter any enclosed or confined space without proper protective equipment, including, but not limited to, self-contained breathing apparatus. Use approved gas detectors in confined spaces.

Section 6 - Fire and Explosion Hazard Data

Personal Precautions, Protective Equipment, and Emergency Procedures: Keep away from flames and chemical oxidants. Eliminate all sources of ignition and in emergency ensure gas supply is shut off. Do not breathe gas. Use non-sparking tools and explosion-proof electrical equipment when working around gas. Ventilate area and allow to evaporate. Stay upwind and away from any accidental releases. Isolate immediate hazardous area and keep unauthorized personnel out. Appropriate protective equipment should be worn as conditions warrant. Before entering storage tanks and confined areas check the atmosphere for oxygen content and flammability.
Environmental hazards: Report spill as required by local and federal regulations.
Methods and materials for containment and cleaning up: Notify local authorities in accordance with all applicable regulations.

Section 7 - Handling and Storage

Precautions for safe handling: Work involving gas should be done by qualified professionals. Use non-sparking tools and explosion-proof electrical equipment. Ground container and transfer equipment to eliminate static electric sparks. Before entering storage tanks and confined areas, check the atmosphere for oxygen content and flammability. Purging of gas lines, blow-downs and other planned releases of natural gas should only be performed by qualified gas professionals. Such gas release operations should only be performed in well-ventilated areas or by safely venting the contents of gas lines and equipment to the outside atmosphere away from people, animals, structures and sources of ignition. All possible ignition sources should be extinguished before and during such operations. Do not release the contents of a gas line into a confined space.
Conditions for safe storage, including any incompatibilities: Store in cool, dry, well-ventilated areas, away from sources of heat, ignition and direct sunlight. Do not allow temperatures in cylinder storage area to exceed 52°C (125°F). Isolate from oxidizers such as oxygen, chlorine, or fluorine. Use a check valve or trap in the discharge line to prevent hazardous backflow. Post “No Smoking or Open Flame” signs in storage and use areas. Protect tanks that are stored in the open against extremes of weather and from ground dampness to prevent rusting. Empty containers retain product residues. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose such containers to heat, flame, sparks, or other sources of ignition. They may explode and cause injury or death. Outdoor or detached storage is preferred.
Odor Fade: Under certain conditions, the distinctive odorant added to natural gas may be diminished or lost so that it cannot be smelled. Gas detection equipment should be used, particularly when working in confined areas. Do not rely on sense of smell alone to determine if there is a gas leak or if gas is otherwise present.

Section 8: Exposure Controls/Personal Protection

Chemical Component	Exposure Limit	NIOSH IDLH
Methane	None Established	None Established
Ethane	None Established	None Established
Propane	1000 ppm TWA OSHA PEL 1000 ppm TWA Cal/OSHA PEL	2100 ppm
n-Butane	800 ppm TWA OSHA PEL 800 ppm TWA Cal/OSHA PEL	None Established
Carbon Dioxide	5000 ppm TWA OSHA PEL 5000 ppm TWA Cal/OSHA PEL 5000 ppm TWA, 30,000 ppm STEL ACGIH TLV	40,000 ppm

Engineering Controls: If the recommended exposure limit is exceeded increased mechanical, non-sparking ventilation such as local exhaust may be required.
Respiratory Protection: If exposure limits are exceeded or if oxygen levels are unknown or deficient, use a NIOSH approved supplied air respirator. Selection of respiratory protection depends on the contaminant type, form and concentration. Select in accordance with OSHA 29 CFR 1910.134/CCR, Title 8, Section 5144, GISO and good Industrial Hygiene practice.
Eye/Face Protection: Wear safety glasses when handling cylinders or when exposure to high pressure gas.

Section 9 - Physical and Chemical Properties

Appearance: Colorless gas or liquid.	**Physical State:** Vapor or liquid.
Color: None.	**Odor:** Often odorless in its natural state. A distinctive warning odorant is added to give it the characteristic unpleasant odor often associated with natural gas. However, the gas odor may not be detectable by smell because of an impaired sense of smell, when the odor is masked by other odors in the area, or because the odorant has been lost due to Odor Fade.
Odor Threshold: Not available.	**pH:** Not applicable.
Freezing Point: Not applicable.	**Boiling Point:** -259^0 F/-162^{0}C (methane).
Flash Point: Flammable gas.	**Evaporation Rate:** Not applicable.
Flammability (solid, gas): Gaseous state.	**Upper Flammability Limit:** 15% in volume in air.
Lower Flammability Limit (also referred to as LEL): 4.5% in volume in air.	**Vapor Pressure**: Not applicable.
Vapor Density (Air = 1): 0.57 - 0.62.	**Relative Density**: 0.57-0.62.
Solubility (water): 3.5 mL/100 mL water at 62.6 ^{0}F/17^{0}C.	**Partition Coefficient (n-octanol/water):** Not applicable.

Section 10 - Stability and Reactivity

Reactivity: Not expected to be reactive.
Chemical Stability: Stable.
Conditions to Avoid: Heat, sparks flames and all sources of ignition.

Hazardous Decomposition Products: Combustion may produce carbon dioxide and water with trace amounts of carbon monoxide, nitrogen oxides, sulfur oxides, hydrocarbons, aldehydes, and soot.

Section 11 - Toxicology Information

Inhalation: Simple asphyxiant. At high concentrations, inhalation can cause symptoms of oxygen deprivation (asphyxiation), which includes shortness of breath, drowsiness, headaches, confusion, decreased coordination, visual disturbances and vomiting, which are reversible when exposure ceases. Continued exposure, however, can lead to hypoxia (inadequate oxygen), unconsciousness and death. Ethane and propane have been shown to cause cardiac sensitization in some studies in laboratory animals. When gas is incompletely combusted, hazardous by-products can be produced such as carbon monoxide, which can cause carbon monoxide poisoning), and other potentially harmful substances.
Eye Irritation: Not expected to cause eye irritation.
Skin Irritation: Not expected to cause skin irritation.
Sensitization: None of the components are skin or respiratory sensitizers.
Chronic Effects: None known.
Carcinogenicity: None of the components listed in Section 3 are regulated as a carcinogen by OSHA, IARC or NTP.

Acute Toxicity Values:
Methane: Inhalation mouse LC50 539,600 ppm/2 hr.

SECTION VI – DEFICIENCIES SUMMARY

1) No manually operated remote shutdown switch installed at the boiler room door as per ASME CSD-1, CE-110(b).
2) There are some discrepancies between the H-3 Manufacture's Data Report and the boiler itself it regards to the number of safety valve openings. The data report is only calling out one opening when there is two on the boiler.

SECTION VII – RECOMMENDATIONS

1) Install a manually operated remote shutdown switch at the boiler room door, and install signage that identifies switch as emergency shutoff.
2) Reach out to the manufacture to get an amended Manufacture Data Report.

CE-100 ELECTRICAL REQUIREMENTS

(21) CE-110 General

Installation requirements shall apply to controls, safety devices, and burners on automatically fired boilers covered by this Standard.

For information regarding boiler and/or burner installations, refer to local codes. In the absence of local codes, see NFPA 70.

(a) A disconnecting means capable of being locked in the open position shall be installed at an accessible location at the boiler so that the boiler can be disconnected from all sources of potential. This disconnecting means shall be an integral part of the boiler or adjacent to it.

(b) A manually operated remote shutdown switch or circuit breaker shall be located just outside the boiler room door and marked for easy identification.

(1) Consideration should be given to the type and location of the remote shutdown switch to safeguard against tampering. If the boiler room door is on the building exterior, the switch should be located just inside the door. If there is more than one door to the boiler room, there should be a remote shutdown switch located at each door.

(2) Activation of the remote shutdown switch or circuit breaker shall immediately shut off the fuel or energy supply.

(3) For installations not in a boiler or equipment room, such as outdoors at ground level or on roof top, the manually operated remote shutdown switch(es) or circuit breaker(s) shall be accessible and located at a safe distance as defined by the authority having jurisdiction.

(c) All uninsulated live metal parts and all rotating or moving parts that may cause injury shall be guarded to avoid accidental contact.

(d) The electrical equipment shall be arranged so that failure of this equipment will cause the fuel supply to shut off.

(e) The power supply to the electrical control system shall be from a two-wire branch circuit that has a grounded conductor; otherwise, an isolation transformer with a two-wire secondary shall be provided. When an isolation transformer is provided, one side of the secondary winding shall be grounded. Control voltage shall not exceed 150 nominal volts, line to line.

(1) One side of all coils shall be electrically located in the grounded side of the circuit. All switches, contacts, and overcurrent devices shall be electrically located in the ungrounded or "hot" side of the circuit.

(2) All electrical contacts of every safety device installed in the same control circuit shall be electrically connected in series.

(f) All electrical components and devices shall have a voltage rating commensurate with the supply voltage of the control system.

(g) All electrical components and devices shall be provided with an electrical enclosure that is at least NEMA Type 1 (general purpose). Where electrical devices will be subject to dripping moisture, the enclosures shall be at least NEMA Type 2 (drip-tight).

(h) All electrical control devices shall be labeled and listed.

(i) The design of the control circuits shall be such that limit and primary safety controls shall directly open a circuit that interrupts the supply of fuel to combustion units.

(j) Automatic resetting devices, controls, or switches shall be installed in accordance with the instructions of the combustion safeguard control manufacturer. No automatic resetting device, control, or switch shall be installed in the wiring between the load side (terminal) of the primary or programming control and the main or ignition fuel valve or valves. This does not preclude the installation of manually operated test switches for the purposes of testing tight closure of individual fuel valves.

CE-120 Overcurrent Protection

(a) Conductors for interconnecting wiring that is smaller than the supply conductors shall be provided with overcurrent protection based on the size of the smallest interconnecting conductors external to any control box.

(b) Overcurrent protection for interconnecting wiring shall be located at the point where the smaller conductors connect to the larger conductors. However, overall overcurrent protection is acceptable if it is sized on the basis of the smallest conductors of the interconnecting wiring.

(c) Overcurrent protection devices shall be accessible, and their function shall be identified.

Attachment A. Lockout/Tagout Pre-job Walk-down Checklist (Page 1 of 1)

Instructions: Perform the pre-job walk-down with the necessary people per Section 3.1 of the Requirements Notice 101-3-01. Complete this checklist and take signed checklist to the lock coordinator. All Authorized Workers are required to participate in the walk-down and sign the checklist in order to check out a lock and tag. If additional workers are added to the job, they must also perform a walk-down of the system and show a signed checklist to the lock coordinator. The signed checklists are to be kept with the parent work document (IWD, work package, etc.).

Work Document Number (e.g., Package/Procedure#): 761510-01

- ☒ We have walked down and discussed the work to be performed.
- ☒ All energy isolation points and positions have been identified and documented.
- ☒ The proper energy control procedure is being used (Simple vs Complex LO/TO).
- ☒ All energy-isolating devices are labeled properly (e.g., labels aren't faded, no handwritten modifications).
- ☒ No discrepancies are found between record drawings, labels, panel schedules, and LO/TO procedures.
- ☒ Lockout devices have been identified to support the work.

*If any of the above items are identified to be inadequate, pause work, report the issues to your RLM, and contact the appropriate SMEs to help resolve issues ***before*** performing/resuming work.

This procedure may only be worked in conjunction with a work control package processed per AP-WORK-002, Work Planning. It may not be used as a stand-alone work control document.

The purpose of this procedure is to provide instructions for performance of the Annual Boiler Waterside/Fireside Checklist at the TA-09/16 Steam Plants.

Work Steps

A Preliminary Items

1. Required boiler training and qualifications:
   a. Boiler Operator: New Mexico Construction Industries Journey Classification as a Journeyman Boiler Operator – High Pressure BO2 (NMAC 14.6.6)

      Note: Boiler Operator Trainee may not operate any boiler devices unless under the direct observation of a Journeyman Boiler Operator (NMAC 14.9.4.29).

   b. Pressure Safety Orientation – Course #769 (LANL P101-34)

   c. Pressure Safety Advanced – Course #11459 (LANL P101-34)

   d. Boiler maintenance crew performing low-NOx verification: boiler training from Sellers Engineering Company or local manufacturer's representative

2. Equipment, tools, instruments:
   - Flue gas analyzer
   - Calibrated boiler pressure gauge

     Record calibration dates on Boiler Checklist (Attachment 1).
3. Supplies, materials:
   - Mobil Polyrex EM grease
   - Slowserve grease

B Boiler Overview

1. TA-09/16 Steam Plant boilers are located at the following eight boiler plants: Plant 1 (TA-16-1480), Plant 4 (TA-16-1483), Plant 5 (TA-16-1484), Plant 8 (TA-16-1487), Plant 11 (TA-16-1490), Plant 12 (TA-16-1491), Plant 13 (TA-09-0282), and Plant 14 (TA-16-1492).
2. Boilers are Sellers Engineering Company fire tube boilers, manufactured in 1995. Each has a maximum allowable working pressure (MAWP) of 150 psig. Supply natural gas pressure is nominally 5 psig. Attachments 2 and 3 contain boiler technical information.
3. Inspection and maintenance consists of the following:
   a. Testing or replacing pressure relief safety valves
   b. Waterside and fireside boiler inspection
   c. Cleaning of debris or scaling found inside the boiler
   d. Inspection and maintenance of various plant components
   e. Steam gauge calibration
   f. Internal and external inspection by a National Board Inspection Code (NBIC) Boiler Inspector
4. Boiler output pressure: 80 psig

   Exception: Boiler output pressure for two boilers at Plant 12 (TA-16-1491): 40 psig
5. There are three pressure switches on top of each boiler: high pressure steam shutdown (High Limit) switch; operating pressure control (OPC) switch; Low-NOx cold start limit control (CSLC) switch.
6. Final settings for all boilers except two at Plant 12 (TA-16-1491):
   a. High pressure steam shutdown (High Limit) switch: 90 psig
   b. Operating pressure control (OPC) switch: 80 psig
   c. Low-NOx steam pressure (CSLC) switch: 40 psig

   Exceptions: Final settings for two boilers at Plant 12 (TA-16-1491):

   a. High pressure steam shutdown (High Limit) switch: 45 psig

b. Operating pressure control (OPC) switch: 40 psig

c. Low-NOx steam pressure (CSLC) switch: 20 psig

7. All steam pressure switch setpoint verification must be performed with a calibrated boiler pressure gauge.
   - All gauges used for pressure switch setpoints must have calibration dates, which are to be recorded on Attachment 1 checklist.
8. There are four pressure switches at the steam header: the lead, the lag, and the two low-pressure switches.
9. For all boilers, set the switches to control the lead/lag feature of the boiler.
10. Verify that all pressure switches perform their intended function.
    - If the pressure setting on a switch varies by more than 20% from the boiler pressure gauge, the switch must be replaced.
11. After final tuning of the boiler parameters, adjust the air flow proving switch to about 2 inches water column below the blower pressure setting.
12. Flue gas analyzer will be needed for two scenarios: light off and Low-NOx boiler settings. Record the O2, CO, NOx, temperature, and efficiency. The boilers are to be run in the Low-NOx mode to be compliant with manufacturer's instructions.
13. Complete Attachments 1 and 2 before the boiler is released by UI Engineering to UI Operations. The Steam Facilities System Engineer must be alerted for inspection of boiler components. See Hold Points below.

C External Inspection

HOLD POINT

UI System Engineer and NBIC Boiler Inspector are needed for external boiler inspection. Give at least 7 days advance notice and coordinate with UI System Engineer.

D Secure Boiler(s) and Prepare for Inspection/Maintenance

1. Secure boilers per UI-PROC-76-28-001-R1 Boiler Shut-Down Dry Layup Process.

   Note: References to documents beginning with UI- also include revisions beginning with UIDO- and IFDO-.
2. Drain boilers in accordance with UI-PROC-76-28-002-R1 Steam Plants Boiler Draining.
3. Isolate system if both boilers are being shut off.

   Note: Outage will be required if doing one boiler at a time to perform the feed water tank and steam header maintenance.

   a. Close main steam valve to system.

   b. Drain steam header

c. Isolate water to feed tank

d. Unplug water softeners, chemical pump, and continuous blowdown controller.

4. Remove gas supply and vent piping prior to opening front door.

E Waterside Inspection/Maintenance

1. Open flue door and inspect tube sheets for water leakage. If tube leakage is suspected call the system engineer for further evaluation. The narrow ligaments between tube holes are subject to tremendous stresses and should be watched for any sign of cracking mainly due to overheating.

2. Drain boiler and remove all hand hole and manhole covers, where applicable, to allow a visual check of all internal accessible areas. Example: shell, tubes and tube sheets.

HOLD POINT

Steam Facilities System Engineer and Chemical Treatment Company Representative are needed for boiler inspection. Give at least 7 days advance notice and coordinate with Steam Facilities System Engineer.

3. Carefully examine waterside surfaces using a strong light and mirror where required. Look for evidence of scale, corrosion, blisters, or pitting, indicating adequacy of water treatment.

4. Use a high pressure hose to wash sediment out of the bottom and other internals of the boiler.

5. Remove and replace the Kunkle pressure relief valves. New pressure relief valves can be purchased and Attachment 4 identifies the pressure relief valves to order. If new valves are not purchased, test and repair the pressure relief valves in accordance with the Engineering Standard Manual Chapter 17.

HOLD POINT

Steam Facilities System Engineer and NBIC Boiler Inspector are needed for internal boiler inspection. Give at least 7 days advance notice and coordinate with Steam Facilities System Engineer

6. With the support of electricians, remove the OPC, High Limit, and CLSC controls. Remove both head covers from the bodies of the two float operated low water cut-offs (LWCs). The float-assembly and mercury switches are located on these heads. Flush out both LWC bodies. Inspect floats and replace if necessary. Reinstall head covers. Remove caps from the inspection crosses associated with both LWCs and flush out piping connected to boiler. Reinstall caps.

F Fireside Inspection/Maintenance

1. Remove all heat extractors and inspect their condition. These devices can be pulled out individually from each of the fire tubes and cleaned if necessary. Repair or replace if necessary.

2. Check gas burners for presence of dirt, lint, or foreign matter. Be sure of ports, gas passages and air passages are free of obstructions.
3. Clean out each main burner with a bottle washer.
4. Check the fireside of furnace and fire tubes for any evidence of soot formation or corrosion. Evidence of soot formation is a sign of improperly adjusted combustion. Brush and vacuum the furnace and fire tubes, if such conditions exist.
5. Drill the pilot manifolds with a #53 drill bit as needed and adjust the pilot manifold position in accordance with the Seller's Owners' Manual.
6. Clean air socks, flame rods, ignitor rod, and replace if needed.
7. Remove fan door and clean fan and shroud. Re-install fan door when complete.
8. Lubricate Baldor blower motor with Polyrex EM (Mobil) grease.
9. Check combustion chamber sight glasses and replace as needed.
10. Check flue door gaskets and other gaskets to make sure that they are in good condition and that they are properly secured. Replace, if required, the flue door gaskets. An ineffective seal may allow flue gases to escape into the boiler room and result in burned gaskets and warped flue doors.
11. Verify the gas low and high limit switches. Record values in Attachment 1.
12. Check the Low-NOx solenoid for proper operation. Remove door and check plunger, clean, and re-grease bearing.
13. After the fireside and waterside surfaces have been inspected by the UI system engineer and by the NBIC boiler inspector, and work is completed, close and secure front and rear flue doors. Reinstall hand hole and manifold covers if applicable; hook up all associated piping and refill boiler to proper level.

G Steam Header Inspection/Maintenance

1. With support of electricians, remove wiring from controls.
2. Remove and clean controls and syphon tubes. Reinstall and replace as needed.
3. Check condition of Y-strainers steam traps, clean and replace as needed.
4. Check the condition of the sparger line controls and safety valves. Repair and replace as needed.

H Feed Water Tank Inspection/Maintenance

1. Electricians go through Feed Water Tank panel to check for loose and broken wires, clean contacts, and inspect.
2. Remove hand holes, inspect tank for deposits and clean as needed.
3. Check condition of anode and replace if needed.
4. Remove and clean temperature gauge.

5. Check condition of sparger line header (if possible) and clean if needed.
6. Remove McDonald Miller strainer. Inspect and replace if needed.
7. Remove and clean all pump strainers, and reinstall.
8. Lubricate Grundfos boiler feed pumps: lubricate the Baldor motor with Polyrex EM (Mobil) grease.
9. Replace hand holes, fill tank, and check for leaks.

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

☐ No entry/coordination requirements

Integrated Work Document (IWD) Part 2
FOD Requirements and Approval for Entry and Area Hazards and Controls
Non-Tenant

IWD No./Work Request No: _____ Revision No.: _____

The Facility Operations Director (FOD) or designee must determine the facility entry and coordination requirements and identify the area environment, safety, health (ESH)/security and safeguards (S&S) hazards and controls associated with the specific activity location.

FOD	TA	Bldg.	Room	Other Location

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

- ☐ No entry/coordination requirements
- ☒ Schedule work with the FOD

Additional Comments:

ACCESS CONTROL: Work within the TA-16 HE Area requires check-in first with TA-16 ACO at TA-16 Building 969. The single most important requirement that all personnel must understand is that a closed gate or other barrier must never be crossed.

CAUTION: This area is a High Explosives (HE) Area. Work group shall adhere to all local ACO instructions as to where access is allowed and where it is restricted, e.g. areas around HE facilities and magazines.

CAUTION: Non-TRIAD workers (outside contractors) require a HE waiver (see P101-8) to work within intraline distance of High Explosive materials if work takes longer than 8 hours.

ABNORMAL EVENTS: Any injury, accident, spill, off normal occurrence, etc. MUST be reported immediately to the WFO-FOD Duty Officer @ 664-2926 AND TA-16 Access Control Office 7-9192

Instructions: In the block below, identify work area hazards that could potentially affect the worker(s) or others. Avoid using the same Part 2, Form 2101 for multiple facilities. Ensure that work area hazards specific to the facility or work location are identified and controlled. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the work area hazards, including any unique or special training required because of work area conditions/hazards.

Worker engagement questions are intended to focus attention on the task and ensure uncertainties are addressed. Basic worker engagement questions are provided below. Additional worker engagement questions should be tailored to the situation.

Each of the questions listed below will be discussed at each Pre-Job Brief with all affected personnel.

Topic	Completed (X)
What permits, permissions, or support are required to safely start this work?	DB
What is the most likely thing that could go wrong (not the worst thing) and what, specifically, will prevent it?	DB
What can cause us to go beyond the scope of the work?	DB
What hazards in the work area may not have been considered during planning of this job	DB

NOTE: When performing steps b. thru e. Boiler water and all solids MUST be contained and not go down the drain.

The following steps are needed to complete waterside maintenance.

a). Open flue door and inspect tube sheets for water leakage. It tube leakage is suspected call the system engineer for further evaluation. The narrow ligaments between tube holes are subject to tremendous stresses and should be watched for any sign of cracking mainly due to overheating.

b). Drain boiler and remove all hand hole and manhole covers, where applicable, to allow a visual check of all internal accessible areas. Example: shell, tubes and tube sheets.

c). Carefully examine waterside surfaces using a strong light and mirror where required. Look for evidence of scale, corrosion, blisters, or pitting, indicating adequacy of water treatment.

d). Use a high pressure hose to wash sediment out of the bottom and other internals of the boiler.

e). Remove both head covers from the bodies of the two float operated low water cut-offs (LWCs).

The float-assembly and mercury switches are located on these heads. Flush out both LWC bodies. Inspect floats and replace if necessary. Reinstall head covers. Remove caps from the inspection crosses associated with both LWCs and flush out piping connected to boiler. Reinstall caps.

Disposal: Dispose of contents/container in accordance with applicable local/regional/national/international regulations.

HAZARDS NOT OTHERWISE CLASSIFIED: Not Applicable

SECTION 3 COMPOSITION/ INFORMATION ON INGREDIENTS

COMPONENTS	CAS NUMBER	AMOUNT
Highly refined mineral oil (C15 - C50)	Mixture	70 - 99 %wt/wt

SECTION 4 FIRST AID MEASURES

Description of first aid measures
Eye: No specific first aid measures are required. As a precaution, remove contact lenses, if worn, and flush eyes with water.
Skin: No specific first aid measures are required. As a precaution, remove clothing and shoes if contaminated. To remove the material from skin, apply a waterless hand cleaner, mineral oil, or petroleum jelly. Then wash with soap and water. Discard contaminated clothing and shoes or thoroughly clean before reuse.
Ingestion: No specific first aid measures are required. Do not induce vomiting. As a precaution, get medical advice.
Inhalation: No specific first aid measures are required. If exposed to excessive levels of material in the air, move the exposed person to fresh air. Get medical attention if coughing or respiratory discomfort occurs.

Most important symptoms and effects, both acute and delayed
IMMEDIATE HEALTH EFFECTS
Eye: Not expected to cause prolonged or significant eye irritation.
Skin: Contact with the skin is not expected to cause prolonged or significant irritation. Contact with the skin is not expected to cause an allergic skin response. Not expected to be harmful to internal organs if absorbed through the skin. High-Pressure Equipment Information: Accidental high-velocity injection under the skin of materials of this type may result in serious injury. Seek medical attention at once should an accident like this occur. The initial wound at the injection site may not appear to be serious at first; but, if left untreated, could result in disfigurement or amputation of the affected part.

Ingestion: Not expected to be harmful if swallowed.
Inhalation: Not expected to be harmful if inhaled. Contains a petroleum-based mineral oil. May cause respiratory irritation or other pulmonary effects following prolonged or repeated inhalation of oil mist at airborne levels above the recommended mineral oil mist exposure limit. Symptoms of respiratory irritation may include coughing and difficulty breathing.

DELAYED OR OTHER HEALTH EFFECTS: Not classified

Indication of any immediate medical attention and special treatment needed
Note to Physicians: In an accident involving high-pressure equipment, this product may be injected under the skin. Such an accident may result in a small, sometimes bloodless, puncture wound. However, because of its driving force, material injected into a fingertip can be deposited into the palm of the hand. Within 24 hours, there is usually a great deal of swelling, discoloration, and intense throbbing pain. Immediate treatment at a surgical emergency center is recommended.

SECTION 5 FIRE FIGHTING MEASURES

EXTINGUISHING MEDIA: Use water fog, foam, dry chemical or carbon dioxide (CO2) to extinguish flames.

PROTECTION OF FIRE FIGHTERS:
Fire Fighting Instructions: This material will burn although it is not easily ignited. See Section 7 for proper handling and storage. For fires involving this material, do not enter any enclosed or confined fire space without proper protective equipment, including self-contained breathing apparatus.
Combustion Products: Highly dependent on combustion conditions. A complex mixture of airborne solids, liquids, and gases including carbon monoxide, carbon dioxide, and unidentified organic compounds will be evolved when this material undergoes combustion.

SECTION 6 ACCIDENTAL RELEASE MEASURES

Protective Measures: Eliminate all sources of ignition in vicinity of spilled material.
Spill Management: Clean up spills immediately, observing precautions in Exposure Controls/Personal Protection section. Stop the source of the release if you can do it without risk. Contain release to prevent further contamination of soil, surface water or groundwater. Clean up spill as soon as possible, observing precautions in Exposure Controls/Personal Protection. Use appropriate techniques such as applying non-combustible absorbent materials or pumping. Where feasible and appropriate, remove contaminated soil. Place contaminated materials in disposable containers and dispose of in a manner consistent with applicable regulations.
Reporting: Report spills to local authorities and/or the U.S. Coast Guard's National Response Center at (800) 424-8802 as appropriate or required.

SECTION 7 HANDLING AND STORAGE

General Handling Information: Avoid contaminating soil or releasing this material into sewage and drainage systems and bodies of water.
Precautionary Measures: Keep out of the reach of children.
Static Hazard: Electrostatic charge may accumulate and create a hazardous condition when handling this material. To minimize this hazard, bonding and grounding may be necessary but may not, by themselves, be sufficient. Review all operations which have the potential of generating and accumulating an electrostatic charge and/or a flammable atmosphere (including tank and container filling, splash filling, tank cleaning, sampling, gauging, switch loading, filtering, mixing, agitation, and vacuum truck operations) and use appropriate mitigating procedures.
Container Warnings: Container is not designed to contain pressure. Do not use pressure to empty container or it may rupture with explosive force. Empty containers retain product residue (solid, liquid, and/or vapor) and can be dangerous. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose such containers to heat, flame, sparks, static electricity, or other sources of ignition. They may explode and cause injury or death. Empty containers should be completely drained, properly closed, and promptly returned to a drum reconditioner or disposed of properly.

SECTION 8 EXPOSURE CONTROLS/PERSONAL PROTECTION

GENERAL CONSIDERATIONS:
Consider the potential hazards of this material (see Section 3), applicable exposure limits, job activities, and other substances in the work place when designing engineering controls and selecting personal protective equipment. If engineering controls or work practices are not adequate to prevent exposure to harmful levels of this material, the personal protective equipment listed below is recommended. The user should read and understand all instructions and limitations supplied with the equipment since protection is usually provided for a limited time or under certain circumstances.

ENGINEERING CONTROLS:

Use in a well-ventilated area.

PERSONAL PROTECTIVE EQUIPMENT
Eye/Face Protection: No special eye protection is normally required. Where splashing is possible, wear safety glasses with side shields as a good safety practice.
Skin Protection: No special protective clothing is normally required. Where splashing is possible, select protective clothing depending on operations conducted, physical requirements and other substances in the workplace. Suggested materials for protective gloves include: Neoprene, Nitrile Rubber, Silver Shield, Viton.
Respiratory Protection: No respiratory protection is normally required.
If user operations generate an oil mist, determine if airborne concentrations are below the occupational exposure limit for mineral oil mist. If not, wear an approved respirator that provides adequate protection from the measured concentrations of this material. For air-purifying respirators use a particulate cartridge. Use a positive pressure air-supplying respirator in circumstances where air-purifying respirators may not provide adequate protection.

Occupational Exposure Limits:

Component	Agency	TWA	STEL	Ceiling	Notation
Highly refined mineral oil (C15 - C50)	OSHA Z-1	5 mg/m3	--	--	--
Highly refined mineral oil (C15 - C50)	ACGIH	5 mg/m3	10 mg/m3	--	--

Consult local authorities for appropriate values.

****EMERGENCY OVERVIEW****

WARNING
Contains sodium nitrite. May be harmful or fatal if swallowed. Substances in the product can lead to the formation of methemoglobin. Unborn children are particularly sensitive to methemoglobinemia. May cause skin and eye irritation.
Do not get in eyes, on skin, on clothing. Do not take internally. Keep container tightly closed. In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. After contact with skin, wash immediately with plenty of water. If swallowed, seek medical advice immediately and show this container or label. Wear suitable protective clothing, gloves and eye/face protection.
Not flammable or combustible. May evolve oxides of nitrogen (NOx) under fire conditions. If product is allowed to dry, the sodium nitrite is an oxidizing agent and can initiate the combustion of other materials.

PRIMARY ROUTES OF EXPOSURE :
Eye, Skin

HUMAN HEALTH HAZARDS - ACUTE :

EYE CONTACT :
Can cause mild to moderate irritation.

SKIN CONTACT :
Can cause mild irritation.

INGESTION :
Not a likely route of exposure. Large exposures may be fatal. Ingestion of sodium nitrite can cause methemoglobinemia which can lead to cyanosis and possible death. Pregnant women and their fetuses are particularly sensitive to the effects of methemoglobinemia.

HUMAN HEALTH HAZARDS - CHRONIC :
Repeated ingestion of small amounts of sodium nitrite causes drops in blood pressure, rapid pulse, headaches and visual disturbances. It may also react with organic amines in the body to form carcinogenic nitrosamines.

4. FIRST AID MEASURES

EYE CONTACT :
Immediately flush eye with water for at least 15 minutes while holding eyelids open. If irritation persists, repeat flushing. Get immediate medical attention.

SKIN CONTACT :
Immediately flush with plenty of water for at least 15 minutes. If symptoms persist, call a physician.

INGESTION :
Induce vomiting if the patient is fully conscious. If conscious, washout mouth and give water to drink. Get immediate medical attention.

INHALATION :
Remove to fresh air, treat symptomatically. Get medical attention.

NOTE TO PHYSICIAN :
Based on the individual reactions of the patient, the physician's judgement should be used to control symptoms and clinical condition. Measures against circulatory shock, respiratory depression and convulsions may be needed.

1.0 PRE-MAINTENANCE ACTIVITIES

NOTE Preoperational and pre-maintenance activities shall be conducted per the work order package, e.g., lockout/tagout, permits, special instructions, etc.

! WARNING If purging of gas lines will be required during this maintenance, ensure that the purging activity is addressed in the Integrated Work Document (IWD). The following must be addressed (see Master Specification 23 1123):

1. Purged fuel gases shall be directly vented to a safe location outdoors, away from personnel and ignition sources. This may be accomplished through permanent piping or temporary piping or hosing.
2. If it is not possible to vent purged gases outdoors, the following conditions must be met:
   a. Purging activity must be approved by the LANL Fire Marshal based on a documented justification detailing why outdoor venting is not possible and IWD.
   b. Gas concentration in the space to which the purge is vented shall be maintained at no more than 25% of the Lower Explosive Limit (LEL). For natural gas, the LEL is a concentration of 5% in air or 50,000 ppm. Therefore a maximum concentration of 12,500 ppm is allowed for natural gas. The concentration may be controlled by providing adequate ventilation or by limiting the amount of purge gas.
   c. Combustible gas detectors shall be used during the purging operation to monitor the gas concentration.
   d. Nonessential personnel shall be evacuated from the vicinity (including adjacent spaces) during the purging operation.
   e. Ignition sources in the purging space shall be controlled or eliminated.

NOTE All repair work, adjustments, or the replacement of parts shall be done in accordance with the manufacturer's procedures, specifications, recommendations, and instructions.

Interim Requirements for Hazardous Energy Identification and Control

1.0 PURPOSE

This Requirements Notice (RN) implements a set of interim requirements that are intended to augment Laboratory procedures for the identification and control of hazardous energy. This RN does not supersede or cancel the Laboratory's procedure for the control of hazardous energy, P101-3, *Lockout/Tagout for Hazardous Energy Control;* rather, it supplements the requirements in P101-3. Any conflicts between RN101-3 and P101-3 must be referred to and resolved by the Lockout/Tagout (LO/TO) Program Lead in consultation with the Associate Laboratory Director for Environment, Safety, Health, Quality, Safeguards, and Security (ALDESHQSS).

If this RN is not cancelled or superseded by another document, it will expire one year from the effective date. This RN can be extended as necessary while long-term actions are developed to sustainably improve overall Laboratory performance for the identification and control of hazardous energy.

2.0 AUTHORITY AND APPLICABILITY

2.1 Authority

- Issuing Authority (IA): Deputy Director for Operations (DDOPS)
- Responsible Manager (RM): Chief Operating Officer for Associate Laboratory Director for Environment, Safety, Health, Quality, Safeguards, and Security (ALDESHQSS)
- Responsible Office (RO): Associate Laboratory Director for Environment, Safety, Health, Quality, Safeguards, and Security (ALDESHQSS)

2.2 Applicability

This RN applies to all Laboratory workers, including subcontractors who prepare, review, and execute LO/TO for the control of hazardous energy.

3.0 REQUIREMENTS NOTICE DESCRIPTION

3.1 Worker Involvement in Identifying Hazardous Energy Sources and Isolation Points

P101-3 Section 3.2, requires that a hazardous energy assessment be completed before performing LO/TO and Authorized Workers are responsible for ensuring that this energy assessment is performed. This section establishes Laboratory interim requirements for how this should be done.

3.1.1 Identifying Hazardous Energy Sources

LO/TO procedures must be prepared by using available drawings, work instructions, and the conduct of in-field walk-downs. The preparer of the LO/TO procedure must involve qualified workers, system, and LO/TO program SMEs as necessary in development of the procedure. Existing standing procedures may be used as long as they were effectively planned and field verified using appropriate personnel.

#746017 01

3.1.2 Identifying and Documenting Isolation Points

Simple LO/TO

A Simple LO/TO task is one that meets the conditions of Simple LO/TO defined in P101-3 *Lockout/Tagout for Hazardous Energy Control*, Section 3.4.1, *Simple LO/TO Procedure*. These Simple LO/TO conditions are also written on the LO/TO Tag.

All Simple LO/TOs require all LO/TO Authorized Workers associated with the task to walk-down the job and sign off on the attached checklist (see Attachment A). If a single worker will be executing the work, a second LO/TO Authorized Worker must participate in the walk-down and sign off on the attached checklist. The signed checklist must be submitted to the lock coordinator before locks and tags are issued. Locks and tags ***will not*** be issued to worker(s) until they have performed the walk-down and signed the checklist.

Complex LO/TO

A Complex LO/TO task is any task that does not meet the conditions of Simple LO/TO. All Complex LO/TOs require the following to walk-down the job and sign off on the attached checklist (see Attachment A):

- The LO/TO Authorized Workers associated with the task,
- The Machinery, System, and/or Equipment (MS&E) owner/operator,
- The preparer of the Form 2244 *Lockout/Tagout LO/TO Orders* or detailed IWD (if used in lieu of the Form 2244).

The signed checklist must be submitted to the lock coordinator before locks and tags are issued. Locks and tags ***will not*** be issued to worker(s) until they have performed the walk-down and signed the checklist.

Note: *The designated person-in-charge (PIC) may represent the preparer if both the PIC and the preparer have walked the job down and discussed the details associated with how the procedure was developed.*

3.2 Verification of Energy Isolation and De-Energization

P101-3, Section 3.6.4 requires that the Authorized Worker verify that isolation and de-energization of the MS&E has been accomplished before starting work. MS&E Owner-Operators are responsible for identifying when Peer Checking is required to be performed. Through this section, the requirement is expanded for all LO/TOs and uses an additional HPI verification tool to ensure that verification of isolation is done adequately every time.

Peer Checking is required for all Simple LO/TOs.

Concurrent Verification is required for all Complex LO/TOs unless Independent Verification is already required by the LO/TO procedure as determined by the MS&E Owner-Operator.

3.2.1 Peer-Checking (PC) for Simple LO/TO

The following Peer Checking steps are to be used for Simple LO/TO:

1. Two people (Authorized Worker and peer) self-checking together at the same time and place.

2. Both people mutually agree that the simple energy control procedure (on the back of the tag) is the appropriate procedure to be followed for this task and all of the conditions of Simple LO/TO are met.
3. The Authorized Worker executes the steps of the procedure, while the peer witnesses the execution of the steps.
4. The peer confirms that the procedure was executed effectively by placing initials next to each step on the back of the tag.

3.2.2 Concurrent Verification (CV) for Complex LO/TO

The following Concurrent Verification steps are to be used for Complex LO/TO:

1. Two people (lead Authorized Worker and second Authorized Worker) working together at the same time and place.
2. Both people mutually agree that the energy control procedure (Form 2244 or detailed IWD) is the appropriate procedure to be followed for the specific task.
3. The lead Authorized Worker executes the first step of the procedure, followed by verification by the second Authorized Worker. This is repeated for each subsequent step.
4. The second Authorized Worker confirms that the procedure was executed effectively by placing initials next to each step on the Form 2244 or detailed IWD.

Note: The second Authorized Worker, who is also the concurrent verifier, must be a qualified worker as described in P101-3, Section 6.1, *Training Requirements*, and will also apply locks and tags to the MS&E.

3.3 Pause Work Responsibilities for Workers and Managers

P101-3, Section 4.6 requires that the Responsible Line Manager (RLM) ensures that workers under their purview who perform LO/TOs are trained, authorized, knowledgeable of the MS&E being locked/tagged, and follow the requirements of the procedure. This section also establishes the required method for the authorized worker and the RLM to have a discussion based on these responsibilities. P101-3 requires the RLM work with the MS&E Owner-Operator to resolve pause/stop work issues identified by Authorized Workers. This is an opportunity for the RLM to express the importance of pausing work when questions arise and to establish themselves as the worker's advocate for safety.

All LO/TO Authorized Workers will have a documented conversation with their RLM to discuss roles and responsibilities associated with performing LO/TO. This is a one-time conversation and can be done at any time. Workers will be given a Crucial Conversation Passport as a reference (see Attachment B).

Note: This action is not a required sequential step in every LO/TO activity.

3.4 Manager Engagement in LO/TO Work Activities

P101-3, Section 4.6 requires the RLM to ensure that workers follow the requirements of the procedure. This section establishes the required validation to ensure that hazardous energy identification and control, including LO/TO, is implemented as expected throughout the Laboratory and to gather feedback for continuous improvement.

The LO/TO Management Observation and Verification (MOV) Guidance Card is required to be used by managers as they perform and document that hazardous energy identification and

control, including LO/TO, evolutions are being performed per this RN and Laboratory hazardous energy control procedures.

All RLMs who authorize LO/TO work will be required to submit one MOV or Safety Conversation Card for LO/TO work activities per month. RLMs who authorize LO/TO less than once per month will meet this requirement at a frequency equivalent to the authorization interval (i.e., quarterly or semi-annually).

4.0 RESPONSIBILITIES

4.1 Deputy Director for Operations

- Establishes and extends this RN as necessary.

4.2 Associate Laboratory Directors (ALDs)

- Ensure that management, supervision, and staff within their directorates are aware of, and adhere to, this document.

4.3 ALDESHQSS

- Resolves any conflicts that might arise between this RN and P101-3.

4.4 Responsible Line Managers

- Understand the roles and responsibilities associated with LO/TO and how to pause work when concerns arise.
- Ensure authorized workers are actively engaged in all aspects of hazardous energy identification and control procedures, including field walk-downs, application of LO/TO, peer and concurrent verification of correct LO/TO placement and energy isolation/de-energization, sign-off on associated checklists, tags, and procedures, and pause work.
- Use the LO/TO MOV Guidance Card when performing MOVs related to monitoring hazardous energy isolation and control, including LO/TO, evolutions.
- Discuss roles and responsibilities associated with performing hazardous energy identification and control, including LO/TO, with workers and provide a crucial conversation passport as a reference to workers.

4.5 Workers

- When authorized, actively engage in all aspects of hazardous energy identification and control procedures, including field walk-downs, application of LO/TO, peer and concurrent verification of correct LO/TO placement and energy isolation/de-energization, sign-off on associated checklists, tags, and procedures, and pause work.
- Discuss roles and responsibilities associated with performing hazardous energy identification and control, including LO/TO, with manager.
- Understand roles and responsibilities associated with LO/TO and how to pause work when concerns arise.

4.6 LO/TO Procedure Preparers

- Use available drawings, work instructions, and field walk-downs to develop LO/TO procedures.

#746017 01

- Engage qualified workers, system, and LO/TO program SMEs as necessary in the development of LO/TO procedures.

5.0 IMPLEMENTATION

The requirements in this document are effective on the effective date.

6.0 TRAINING

No training is required for this RN. P101-3 *Lockout/Tagout for Hazardous Energy Control* lists required training.

7.0 EXCEPTION OR VARIANCE

To obtain an exception or variance to this RN, the following steps must be followed:

- Managers may request an exception or variance from the Issuing Authority (IA) through the Responsible Office (RO) and Responsible Manager (RM) using Form 3057, *Request for Exception or Variance*.
- At the IA's request, the RO and RM will provide recommendations and supporting information.
- The IA or designee will approve or disapprove the request, and forward the Form 3057 to the Policy Office and copy the requesting manager.
- The Policy Office will send notification that the exception or variance is effective and ready for implementation after Safety Basis Division has completed appropriate reviews.

The Policy Office maintains the official copy of record of the approved correspondence granting the exception or variance.
