Degreaser

Completed Work Practice Checklist

MONTHLY WORK PRACTICE CHECK LIST
TA-55-DG-1 DEGREASER

R 04/20/2015

Date of Action: 7-27-2023	**Location of Source : (TA/BLDG/Room) TA-55-PF4-319**	
Monitoring Requirements(A1007.A[1]):	**Yes/No**	**Comments**
1. Does the operator monitor and record the amount of solvent added to the degreaser?	Y	
Recordkeeping Requirements (A1007.A[1])	**Yes/No**	**Comments**
1. Are the actual emissions rate (pounds/month) of VOC and HAPS based on the quantity of solvent lost to evaporation calculated on a monthly basis?	Yes	Emissions are calculated using the Degreaser Compliance Database by air quality compliance personnel.
2. Are the semi-annual emissions rate (tons/year) calculated for this source category and added to the facility-wide emissions rates in Table 106.B (Facility-wide Allowable Emissions)?	Yes	Emissions are calculated using the Degreaser Compliance Database by air quality compliance personnel.
3. Does the operator maintain records of the degreaser solvent content?	Y	
4. Does the operator maintain work practice checklists?	Y	
5. Does the operator maintain records in accordance with Section B109, General Recordkeeping Requirements?	Y	
Operational Requirements (A1007.A[1])	**Yes/No**	**Comments**
1. Does the operator ensure the degreaser is closed with a tight fitting cover whenever not in use?	Y	
2. Does the operator maintain a freeboard ratio of 0.75 or greater?	Y	Glove box is included in freeboard ratio determination.
3. Does the operator ensure that all collected and stored waste solvent and wipe rags are placed in closed containers?	Y	
4. Does the operator ensure that flushing is performed only within the freeboard area only?	Y	All rinsing is performed within the freeboard area.
5. Does the operator allow cleaned parts to drip for 15 seconds or until dripping stops (whichever is longer)?	Y	
6. Does the operator ensure that the solvent level does not exceed the fill line on the solvent level?	Y	
7. Does the operator ensure that all spills are wiped up immediately?	Y	
8. Does the operator ensure that there is no creation of observable splashing with agitation device?	N/A	An air or pump agitated solvent bath is not used.

MONTHLY WORK PRACTICE CHECK LIST
TA-55-DG-1 DEGREASER

R 04/20/2015

Operational Requirements (A1007.A[1]) continued	Yes/No	Comments
9. Does the operator ensure that the degreaser is not exposed to drafts greater than 40 meters per minute (132 feet per minute)?	Y	Glove box air flow rates based on system design descriptions average between 5 acfm (normal operating) up to 40 acfm maximum for a single glove box.
10. Does the operator ensure that no sponges, fabric, wood or paper products are cleaned in the degreaser?	Y	

Notification Requirements: If any of the boxes were checked with "No", please contact Air Quality Compliance Personnel at 665-1338.

Comments:

Form completed by:

Signature	Name (print)	Z number	Date
[signature]	Jake Montoya	334755	7-27-2023

The permit section or condition noted at the end of each requirement is from the following reference:

[1] Title V Operating Permit No: P100-R2

All required documentation must be kept for a minimum of 5 years from the date it was gathered or from the date of the operating permit issuance (February 27, 2015).

At the end of each assessment period this form must be filed as an official record.

Operational Requirements (A1007.A[1])	**Yes/No**	**Comments**
1. Does the operator ensure the degreaser is closed with a tight fitting cover whenever not in use?	Y	
2. Does the operator maintain a freeboard ratio of 0.75 or greater?	Y	Glove box is included in freeboard ratio determination.
3. Does the operator ensure that all collected and stored waste solvent and wipe rags are placed in closed containers?	Y	
4. Does the operator ensure that flushing is performed only within the freeboard area only?	Y	All rinsing is performed within the freeboard area.
5. Does the operator allow cleaned parts to drip for 15 seconds or until dripping stops (whichever is longer)?	Y	
6. Does the operator ensure that the solvent level does not exceed the fill line on the solvent level?	Y	
7. Does the operator ensure that all spills are wiped up immediately?	Y	
8. Does the operator ensure that there is no creation of observable splashing with agitation device?	N/A	An air or pump agitated solvent bath is not used.

TA-33-G-1-P Daily Operating Logs

Daily TA-33-G-1-P Cummins/ONAN/DFHD 1000 kW Generator Hour Log

This generator has the following air quality permit requirements:

This generator engine is authorized to operate **no more than eight (8) hours per day**.

This unit can **operate only between the hours of 7:00 AM and 5:00 PM**

The permittee shall monitor the time(s) of operation each day.

The permittee shall monitor and keep records of the time(s) of operation each day, and the daily, monthly, and the monthly rolling 12-month total hours of operation of the genset (LANL EPC-CP will maintain this)

Reference

(a). Estimated maximum box weight is 45 pounds. Information provided by shredding operations. Full box weight of tightly packed paper.

(b). Emission Factor (percentage of material shredded that will enter into the exhaust) obtained from the manufacturer of the air handling system, AGET Manufacturing Co. 15% is also listed in the construction permit application.

(c). Information provided by the shredding operations personnel.

(d). Information on control equipment efficiencies was provided by the manufacturer (SEM) of the Data Disintegrator. Those values not given were extrapolated using manufacturer data. Efficiencies of 75% for the Cyclone and 95% for the bag house are listed in the construction permit application. (see cyclone efficiency tab for more info.)

(e). Manufacturer provided info that the dust into the exhaust would be in the size range of 5-20 um. Conservative assumption that 15% is PM2.5, and 90% is PM10.

(f). Emissions calculated by summing the emissions from January-June of current year plus July-December of previous year.

(g). Cannot exceed 25,000 boxes or 565 tons of uncontrolled potential PM emissions per year.

Maximum Annual emission rate is: **9.9 tpy or 2.3 lb/hr of Total Suspended Particulate (TSP) per year.**
9.9 tpy or 2.3 lb/hr of Particulate Matter <10µm (PM-10) per year.
Cannot exceed 565 tons of uncontrolled potential PM emissions per year.

Worker Engagement Questions

761898-01

Worker engagement questions are intended to focus attention on the task and ensure uncertainties are addressed. Basic worker engagement questions are provided below. Additional worker engagement questions should be tailored to the situation.

Each of the questions listed below will be discussed at each Pre-Job Brief with all affected personnel.

Topic	Completed (X)
What permits, permissions, or support are required to safely start this work?	X
What is the most likely thing that could go wrong (not the worst thing) and what, specifically, will prevent it?	X
What can cause us to go beyond the scope of the work?	X
What hazards in the work area may not have been considered during planning of this job?	X

Los Alamos NATIONAL LABORATORY

Form 2103

Integrated Work Document (IWD) Part 3, Validation and Work Release

IWD No: 761898-01 Revision No.:

By signing below, I verify that this activity is appropriate to be conducted in the facility and is within the scope of the facility safety basis; area/facility hazards have been identified and addressed; work meets applicable Laboratory environmental, safety, and security requirements, DOE Orders, and other applicable regulatory requirements; and that the appropriate Subject Matter Expert (SME) reviews have been completed.

FOD or FOD designee (e.g., Operations Manager)

Signature/Z-Number/Date **(If required by FOD)**: _____

By signing below, I have verified the following:

- I have verified authorization by ensuring approval signatures of the RLM and FOD.
- I have jointly conducted a validation walkdown with workers to review tasks and steps for workability and to ensure that the hazards and controls are described correctly and have not changed.
- The assigned workers are authorized and competent to perform the work in a safe, secure, and environmentally responsible manner.
- I have conducted the pre-job briefing, and all workers (including support workers) have been briefed.
- I have ensured coordination with any required FOD work-area representatives (e.g., area work coordinators).

PIC (Signature/Z Number/Date) **Required**: [signature] 375809 10-17-2023

Alternate PIC signature **acknowledges** PIC authority is assumed for the first time. *(Note: Alternate PICs are required to sign only once, but formal handoff includes conferring with previous PIC to obtain all required information associated with the handoff and informing workers that they have a new PIC.)*

Alternate PIC (Signature/Z Number/Date) **Required**: _____

Alternate PIC (Signature/Z Number/Date) **Required**: _____

Pre-Job Brief Content

- Prerequisites, where applicable – things that must be staged, in place, or completed before the work starts
- Worker pause/stop work authority and obligation per P101-18, Procedure for Pause/Stop Work
- Scope of work and work activities including IWD/WCDs, procedures, work package documents, and drawings, as applicable
- Hazards and associated controls, including personal protective equipment, and the resolution of any related questions
- Critical steps* including where they are covered in the IWD/WCD and which HPI technique will be used for each critical step
- Permit and plan requirements and limitations (e.g., penetrations, spark flame) and how permit requirements will be met
- Applicable regulatory requirements [e.g., Technical Safety Requirements (TSR), Code of Federal Regulations (CFR)] including how these requirements can be inadvertently violated if the IWD/WCD is not followed
- Roles and responsibilities including person(s) responsible for making critical decisions (e.g., PIC)
- Handoffs and coordination requirements among workers and multiple PICs, if applicable
- Work site conditions including location of phone and emergency equipment (e.g., fire alarms, fire extinguisher, AED) and how to respond to alarms and emergencies
- Hold points and other notifications/signoffs (e.g., inspections, Industrial Hygiene, radiation protection)
- Applicable Lessons Learned (LL), especially from previous performance of the activity
- Any other information needed to perform this activity in a safe, secure, and environmentally responsible manner

Ask: Does everyone agree with the work tasks/steps and controls, and commit to follow them?

*Critical steps are when "a procedure step, series of steps, or action that, if performed improperly, will cause irreversible harm to equipment, people, or the environment" (DOE-HDBK-1028-2009, Volume 1).

IWD No: 761898-01 Revision No.:

Pre-Job Brief Attendance Roster

By signing below **as required**, I agree to the following:

- I agree to follow the work steps and implement the controls as written, as applicable to my work assignments.
- I agree to pause/stop work when conditions or hazards change or when I encounter unexpected conditions during the execution of work, or when work cannot be performed as written, or instructions become unclear during execution.
- I confirm that I am authorized, qualified, and fit to perform the work.

Los Alamos NATIONAL LABORATORY	Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)	
Subcontract # 310447		**Company Name: Chaparral**
Revision #: 0		**Activity/Task Title:** STANDING IWD for CHAPARRAL PM Work
Work Document #: (WO # / Task) 761898 - 01		**Subcontractor Planner (Name/Z#/Date)** Kirk David Hess/ 198462/ 4/21/2022
		LANL Planner/Preparer (Name/Z#/Date) Brandon Schleft/ 255039/ 4/21/2022
TA: 52	**Building:** 0011	**Room:** **Additional Location Description:**

2.5. Air quality monitoring is required throughout the work process.

2.6. Electrical PPE for performing LO/TO: Class 1.3b <1.2 cal/cm² is Category 0 PPE.

2.6.1. Non-melting or untreated natural fiber along sleeve shirt and long pants, safety glasses, hearing protection, and heavy-duty gloves.

2.7. **Be aware of overhead hazards:** Stay clear of any power lines when setting up crane and aerial manlift.

2.8. **Scissor/Man Lift**

2.8.1. Perform daily checklist inspection before operation in accordance with 901-A.001 Aerial Man lifts/Elevating Platform Pre-Start Inspection.

2.8.2. Do not operate a man-lift unless all controls are operational.

2.8.3. Operate the lift in accordance with manufacturer's specifications.

2.8.4. Ensure a clean and clear operating area. Identify obstacles that may pose a hazard when positioning the equipment.

2.8.5. Always use a spotter to reposition the man-lift.

2.9. Be aware of pinch points.

2.9.1. Proper body, hand, and foot placement.

2.10. Signatures, Initials and place keeping blocks at the end of a step signifies the completion of that step or series of steps. Steps SHALL be signed/marked upon completion.

2.11. Use proper lifting and bending technique at all times.

2.12. Dress appropriately:
Monitor for early signs of the onset of hypothermia while working. Any one sign of hypothermia is: shivering, slurred speech, goose bumps, numbness, loss of feeling or prickly type discomfort in extremities which may cause frost bite, hypothermia and/or dehydration.

No: RN101-3-01 Interim Requirements for Hazardous Energy Identification and Control
Attachment A. Lockout/Tagout Pre-job Walk-down Checklist (Page 1 of 1)

Instructions: Perform the pre-job walk-down with the necessary people per Section 3.1 of the Requirements Notice 101-3-01. Complete this checklist and take signed checklist to the lock coordinator. All Authorized Workers are required to participate in the walk-down and sign the checklist in order to check out a lock and tag. If additional workers are added to the job, they must also perform a walk-down of the system and show a signed checklist to the lock coordinator. The signed checklists are to be kept with the parent work document (IWD, work package, etc.).

Work Document Number (e.g., Package/Procedure#): 761898-01

- [x] We have walked down and discussed the work to be performed.
- [x] All energy isolation points and positions have been identified and documented.
- [x] The proper energy control procedure is being used (Simple vs Complex LO/TO).
- [x] All energy-isolating devices are labeled properly (e.g., labels aren't faded, no handwritten modifications).
- [x] No discrepancies are found between record drawings, labels, panel schedules, and LO/TO procedures.
- [x] Lockout devices have been identified to support the work.

*If any of the above items are identified to be inadequate, pause work, report the issues to your RLM, and contact the appropriate SMEs to help resolve issues ***before*** performing/resuming work.

Simple Lockout/Tagout

By signing below, you acknowledge that you have completed the pre-job walk-down and there are no issues that need to be reported to your Responsible Line Manager before beginning work.

Lockout/Tagout (LO/TO) Orders

Section 1: General Information

Work Document Number (e.g., Package/Procedure #): 761898-01	LO/TO Remedy ID:
Location of Equipment to be Isolated: TA: 52 Bldg: 4 Rm/Other: 100	Description of Machinery, System & Equipment (MS&E) to be worked on: PAPER DISINTEGRATOR & FILTER HOUSE
MS&E Owner/Operator: Z Number:	Phone:
Shutdown to be performed by MS&E Owner/Operator (as determined by MS&E Owner/Operator) ☐ Yes ☐ No	Re-energize/restart to be performed by MS&E Owner/Operator (as determined by MS&E Owner/Operator) Yes No
Reason for LO/TO: P/M	
Group LO/TO (2 or more)? Yes ☑ No *If yes, a lead authorized worker must be appointed.*	Group lock box used? Yes ☑ No
Shift or Personnel Changes? Yes ☑ No *If yes, a description of how the continuity of LO/TO protection will be ensured must be referenced or attached to this form. (See Section 3.9.6 of P101-3 for details.)*	Continuity of LO/TO protection details described in operating procedure, work instruction, or other work control document. Document Number: 761898-01

Section 2: Energy Control Procedure

1. Plan the work.
2. Identify and assess hazardous energy.
3. Contact the MS&E owner/operator.
4. Obtain locks and tags from lock coordinator.
5. Notify affected workers.
6. Shutdown MS&E according to **Section 3: Shutdown Sequence.**
7. Isolate and lock out MS&E from energy source, relieve stored energy, and perform verification of isolation according to **Section 4: LO/TO Sequence.**
8. Perform the work.
9. Release MS&E from LO/TO according to **Section 5: Release MS&E from Lockout/Tagout Sequence.**

Section 3: Shutdown Sequence

☑ Perform shutdown according to operating procedure, work instruction, or other work control document (e.g., IWD, Owner's Manual, SOP).
Document Number: 761898-01
N/A; MS&E to be worked on will be isolated according to **Section 4: LO/TO Sequence** (e.g., cannot be shut down)
Detail the process to normally shut down the MS&E below, if not following other document referenced above or N/A.

Step No.	Action/Description	Step No.	Action/Description
1		6	
2		7	
3		8	
4		9	
5		10

Section 4: LO/TO Sequence

Perform LO/TO sequence according to operating procedure, work instruction, or other work control document (e.g., IWD, Owner's Manual, SOP).
Document Number: 761898-01
Describe how to effectively isolate & lockout the MS&E below, if not following other document referenced above.

Isolate & Lockout (Step No.)	Equipment Descriptor (What is being locked out? e.g., machine drive motor, input power to MCC)	Energy Source (e.g., electrical, mechanical, pneumatic, hydraulic, chemical, thermal)	Energy Isolation Device (e.g., specific ID, description, circuit #, lock box #)	Location of Energy Isolation Device (e.g., room number, north wall, south wall)	Required LO/TO Position or Alignment (e.g., off, open, closed, on)	Verification Method (e.g., live/dead/live, crack open, on-off-on-off, peer checking, independent verification)	Verifier's Initials (if req'd)	See Section 5: Release (Step No.)
(1)								
(2)								
(3)								
(4)								
(5)								
(6)								
(7)								
(8)								

Section 5: Release MS&E from Lockout/Tagout Sequence

1. Check the MS&E and immediate area for items that could result in damage or danger on start-up.
2. Check the work area to ensure that all workers have been safely positioned or removed from the work area.
3. Verify that the controls are in neutral or "off" position.
4. Notify the owner/operator and affected workers that work is complete and MS&E is ready to release from LO/TO.
5. Remove the LO/TO device, and re-energize (if appropriate according to MS&E owner/operator) according to the sequence as identified above under Release in **Section 4: LO/TO Sequence** or according to operating procedure, work instruction, or other work control document identified in **Section 4**.
6. Return lock and locking device to Lock Coordinator.

Energy Control Procedure prepared by:

Preparer (print name)	Z Number	Organization	Phone	Signature/Date
KIRK HESS	198462	CMS	505 275 7680	10/19/23

By signing below, you acknowledge that this energy control procedure and/or referenced documents identify the isolation devices, isolation points, and methods necessary to prevent any unexpected release of hazardous energy.

Hydraulic reservoir, pump, valves, lines, hoses, and connections are free of leaks or other damage.			
All equipment functions properly.			
Fuel supply tank, lines, connections, valves, etc. are free of leaks.			
Verify fuel supply system condition and functionality.			
Check all wiring cables for breaks, missing insulation, and loose or improper connections.			
Check wiring harness for any physical damage, missing, and loose or improper terminations.			
Check the entire unit for any loose or missing components or parts.			
Tires or wheels are in good condition and roll properly to transport the unit in a normal manner.			
All placards and warning signs are securely attached to the unit and are legible.			
All control markings are still securely attached to the unit and are legible. Note: all control functions must be consistent with the associated markings.			
Operator information is provided on the unit, and manufacturer capacity ratings are provided for all operating configurations of the equipment.			
Ensure outriggers are not bent, cracked, deformed, or otherwise damaged and that they function properly.			
Ensure stabilizers are not bent, cracked, deformed, or otherwise damaged and function properly.			
Check the entire support structure for any bends, cracks, deformation, or other evidence of damage that would prevent the unit from functioning properly.			
Guardrail shows no signs of bends, cracks, deformation, or other evidence of damage that would weaken the structural integrity of the system.			
Manlift has been properly inspected and maintained within the last year (note date on the inspection sticker mounted on unit).			

Remarks: _____

Los Alamos NATIONAL LABORATORY EST. 1943	*Preventive Maintenance Instruction* Manlift Inspection and Maintenance **901-A.001: Aerial Manlifts and Elevating Work Platform Pre-Start Inspection**
Work Order No. 761898-01	Equipment ID No.: _____

Indicate below any other manufacturer-recommended checks that are needed before use of the specific equipment:

_____

_____

Workplace Inspection Procedures	**S**	**U**	**N/A**
NOTE The aerial platform shall be used in accordance with manufacturer's instructions and ANSI/SIA standards. The operator shall check the work site for the following items before each elevation of the platform.			
Observe and avoid any drop-offs or holes during transportation.			
Observe and avoid any bumps on the floor surface during transportation.			
Check for and avoid any floor obstructions during transportation.			
Check for any debris that could cause a hazard during operation of the equipment.			
Observe and avoid any overhead obstructions.			
Maintain a safe distance from any high-voltage conductors.			
Make note of any hazardous locations.			
Check for inadequate surface and support to withstand all load forces imposed by the aerial platform in all operating configurations.			
Note any significant wind and weather conditions, if applicable.			
Identify any other unsafe workplace conditions.			
Be aware of the presence of unauthorized persons.

Los Alamos NATIONAL LABORATORY	Facilities Maintenance IWD – (Facility Maintenance Activity Specific Information)	
Subcontract # 310447		**Company Name: Chaparral**
Revision #: 0		**Activity/Task Title:** STANDING IWD for CHAPARRAL PM Work
Work Document #: (WO # / Task) 761898-01		**Subcontractor Planner (Name/Z#/Date)** Kirk David Hess/ 198462/ 4/21/2022
		LANL Planner/Preparer (Name/Z#/Date) Brandon Schleft/ 255039/ 4/21/2022
TA: 52	**Building:** 0011	**Room:** **Additional Location Description:**

1. Scope of Work

The scope of work is for Chaparral to perform PMs on the Disintegrator (Paper Shredder Only).

Work is to Include:

1.1.1. Removal, repair, or replacement of disintegrator blades.

1.1.2. Inspection of dust collector, and to clear clogs (Not to include removal of side panel).

1.1.3. Removal of side panel for filter tube inspection, and replacement as needed.

1.1.4. Installation of new conveyor belt if needed.

"NO MEDIA SHREDDER REPAIRS ALLOWED"

Hazard Analysis (HA) Team: Date: 4/21/2022

Brandon Schleft

2. Precautions and Limitations

2.1. **IF** steps cannot be completed as described, or **IF** unforeseen situations occur, **Then** PAUSE WORK and STABILIZE the situation, CONTACT your supervisor, and AWAIT further instructions before proceeding.

2.2. Be aware of ground and floor conditions.

2.3. The following minimum PPE is required:

2.3.1. Safety Shoes

2.3.2. Safety Glasses with Side Shields

2.3.3. Long sleeves, long pants, and Nitrile Gloves when handling chemicals.

2.3.4. Hard Hats (When working under scaffolding).

2.4. PPE required while working inside the shredder:

2.4.1. Half-mask N95 or Full Face respirator with P100 Cartridges.

Los Alamos NATIONAL LABORATORY

Integrated Work Document (IWD) Part 2

FOD Requirements and Approval for Entry and Area Hazards and Controls

Non-Tenant

761898-01

IWD No./Work Request No: ____ Revision No.: ____

The Facility Operations Director (FOD) or designee must determine the facility entry and coordination requirements and identify the area environment, safety, health (ESH)/security and safeguards (S&S) hazards and controls associated with the specific activity location.

FOD	TA	Bldg.	Room	Other Location
FOD 7	52	0011	N/A	N/A
FOD Designated Facility Point-of-Contact	Name	Phone	Pager	Email
	Graig Procureur	505695-3783	N/A	graigp@lanl.gov

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

- ☐ No entry/coordination requirements
- ☒ Schedule work with the FOD
- ☒ Attend Plan of the Day/Plan of the Week (POTD/POTW)
- ☐ Security clearance or escort required
- ☒ Other security requirements (e.g., no cellphone or foreign nationals)
- ☐ Review work under Authorization Basis / Safety Basis / Unreviewed Safety Question (USQ)
- ☒ FOD-designated facility point-of-contact must sign IWD Part 3
- ☐ Facility-specific or other work area training required
- ☒ Check in daily
- ☒ Check out daily
- ☐ Quality issues
- ☐ Non-security escort required
- ☐ Other bounding conditions: ____

Additional Comments:

Contact POC for access, No phones allowed

Instructions: In the block below, identify work area hazards that could potentially affect the worker(s) or others. Avoid using the same Part 2, Form 2101 for multiple facilities. Ensure that work area hazards specific to the facility or work location are identified and controlled. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the work area hazards, including any unique or special training required because of work area conditions/hazards.

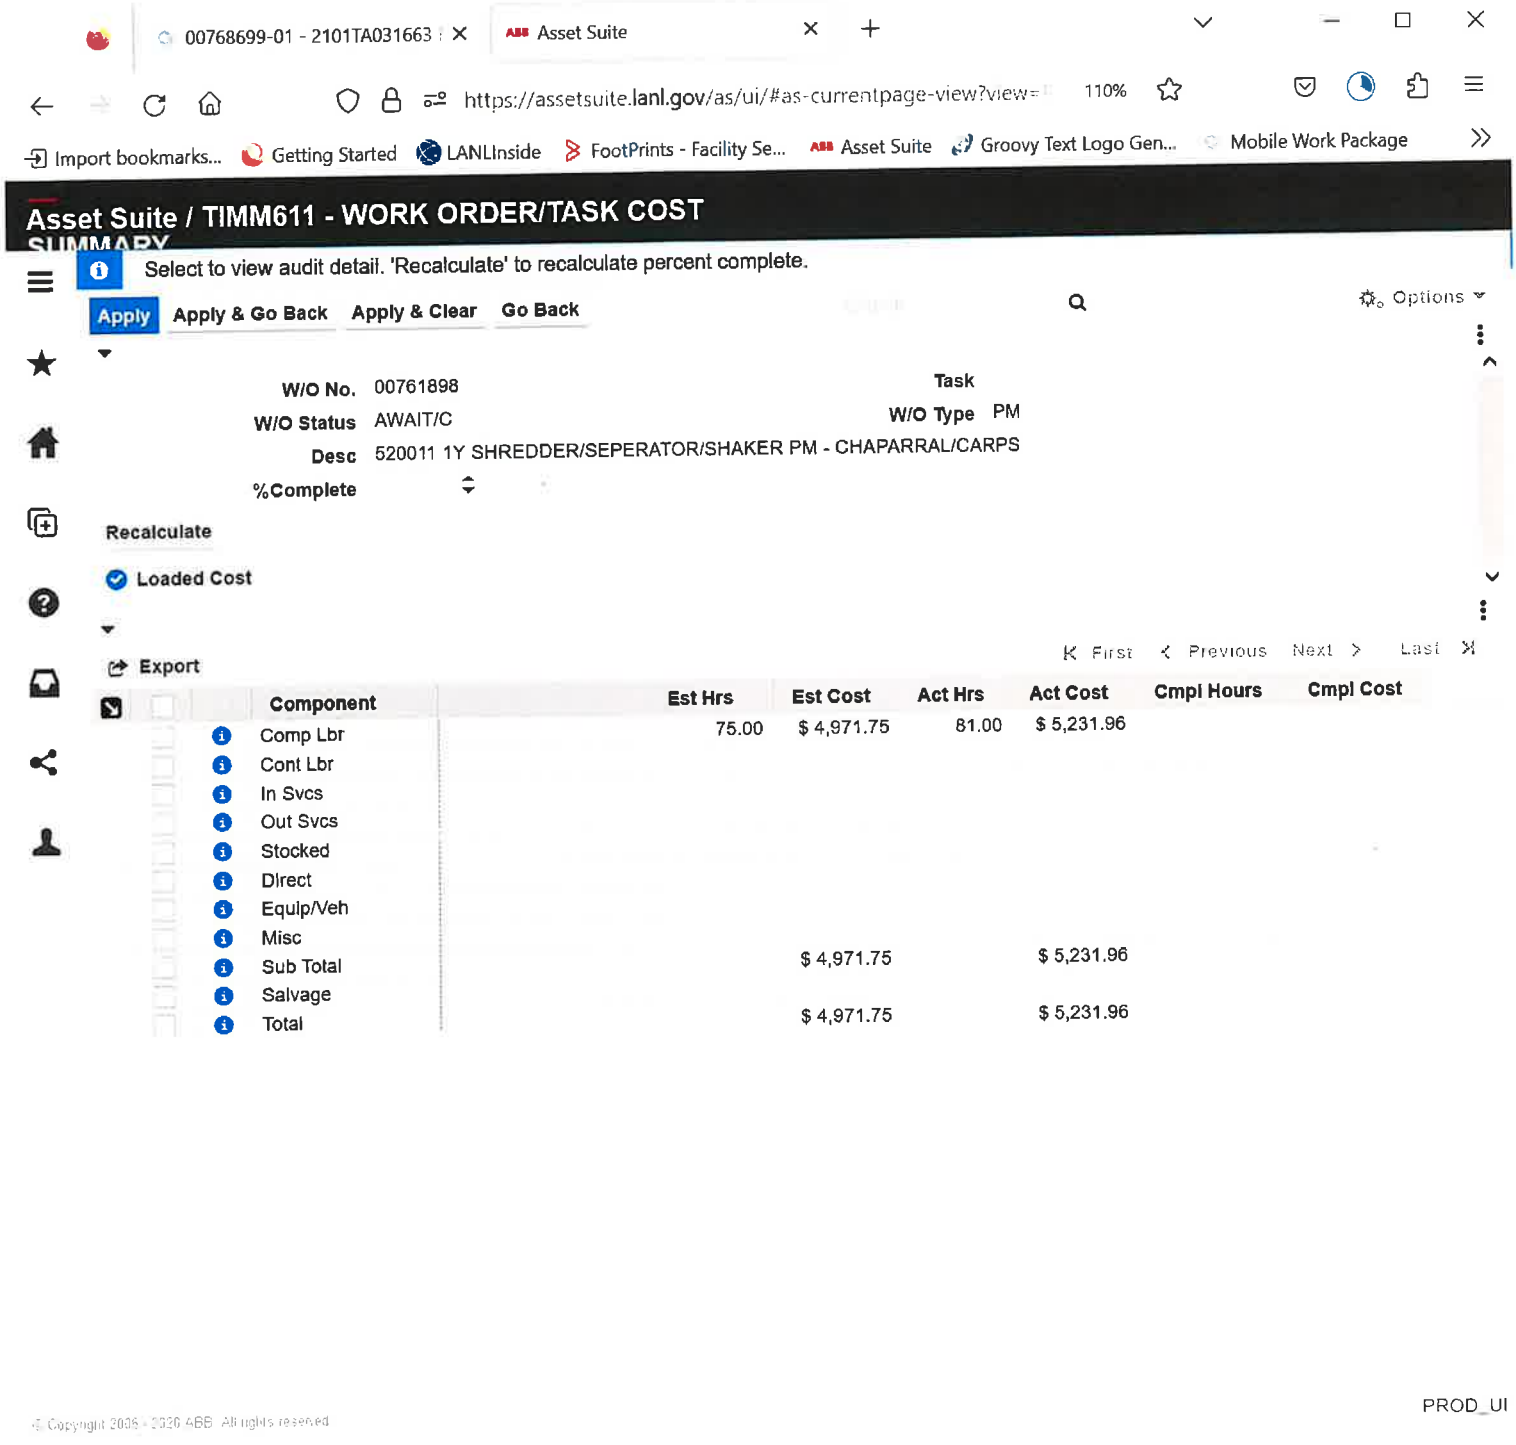
ESH/S&S WORK AREA HAZARDS AND CONTROLS

Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	**Work Area Hazard Present**	**Facility Controls/ Preventive Measures/ Bounding Conditions** Specify preventive measures, controls, and bounding conditions for each site hazard	**Reference Documents** List permits, operating manuals, and other procedures (if required in the field)	**Training and Qualification** (*special or unique to the area*)
☐ **No work area hazards**				
Ionizing Radiation Work in posted radiological areas, work with radioactive materials, or work on or near radiation producing devices. **Specify Hazard:**	☐ Yes ☒ No	N/A	N/A	N/A

761898-01

IWD No./Work Request No.: ____ Revision No.: ____

ESH/S&S WORK AREA HAZARDS AND CONTROLS



Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	**Work Area Hazard Present**	**Facility Controls/ Preventive Measures/ Bounding Conditions** Specify preventive measures, controls, and bounding conditions for each site hazard	**Reference Documents** List permits, operating manuals, and other reference procedures	**Training and Qualification** List training requirements
Worker Exposure Working near non-ionizing radiation, beryllium, noise, chemicals, biological hazards, lead, asbestos, temperature/humidity extremes, nanoparticles, cryogens, or high explosives. **Specify Hazards:** Absestos and Lead potential	☒ Yes ☐ No	**Asbestos and Lead hazards. Follow controls provided by ES&H.**	N/A	Applicable traing requirements.
Energized and Operative Systems Working near energized electrical parts, pressure systems, steam lines; unprotected belts, pulleys, chains, rotating equipment; fuel-fired equipment (other than vehicles); or spark/flame-producing operations. **Specify Hazards:** Shredder equipment, airborn heavy metal potential	☒ Yes ☐ No	Adhere to all signage. Heavy metal potential from shredding material.	N/A	N/A
Confined Spaces Entry into tanks, manholes, cooling towers, sumps, or any other area with potentially low oxygen concentration or other hazards such as toxic vapors or engulfment. **Specify Hazards:**	☐ Yes ☒ No	N/A	N/A	N/A
Elevated Work Surface Unprotected elevated work (e.g., conventional guardrails are not provided) requiring fall protection per P101-20, *Fall Protection Program*, or a surface not designed to support worker(s) and equipment.	☐ Yes ☒ No	N/A	N/A	N/A
Environmental Activities conducted in areas containing potential release sites, contaminated soil, sensitive species, watercourse, wetlands, floodplains, historical/archeological sites, or other work area element that can impact, or be impacted by, the environment. **Specify Hazards:**	☐ Yes ☒ No	N/A	N/A	N/A
Security Requirements **Specify:**	☐ Yes ☒ No	N/A	N/A	N/A
Other Hazards **Specify:**	☐ Yes ☒ No	N/A	N/A	N/A

I have verified that the items indicated above adequately identify existing and potential area hazards associated with the work location and communicate facility-required controls that will enable safe, secure, and environmentally compliant work execution.

FOD or Representative (Signature/Z Number/Date) **Approval Required**

(a) Meets condition A1307.A, monitoring condition 1, of Title V Permit P100-R2M5

(b) Allowable Emissions are from table A1302A of Permit P100-R2M5.

(c) A1307.A monitoring condition 3, can't be calculated because the units are based on the emission factor. The emission rates are based on the emission factor for NOx (lb/MMscf), which is 58 lb/MMscf, this emission factor is an average of source tests conducted on all 3 boilers in September 2002 burning natural gas after flue gas recirculation (FGR) installed. This factor is converted to lbs/MMBtu by dividing by the high heat value of natural gas (the number of Btu in a scf). As the HHV of natural gas ranges in value, the following emission range was calculated using the low and high values at LANL between 2011 and 2023, the lowest was 939.97 Btu/scf and the highest was 1079.3 Btu/scf, therefore the NOx emission rate will range from 0.0537 to 0.0617 lbs/MMBtu. These NOx emission rates are well below the 0.3 lb/MMBtu heat input limit in A1302.B.

(a) Each boilers uses 1303 gallons per hour at 110% or 178 MMbtu input (provided by Paul Parker on 9-12-12). Hour calculation uses 1184 gph as 100%.

(b) Allowable Emissions are from table A1302A of Permit P100-R2M5.

(c) Meets condition A1307.A, monitoring condition 1, of Title V Permit P100-R2M5

Monthly Average Hourly Emissions Rate 2023 (pph)
Unit TA-3-22-CT-1

Work Order Task Instructions

DO NOT lubricate the bearings if the FGR fan is NOT in operation or in service so that proper amount of grease can be applied
using headphones
You can hear when grease reaches the bearing rolling element. At this point, stop adding grease to prevent bearing damage from overheating

There are two bearings on the fan, each with its own zerk plug
Remove the shaft guard located in the middle of the drive. The two zerk plugs are located on each of the two bearings

1. Use grease gun with the Ultralube headphones to insert the correct amount

of Mobilith SHC 100 grease into zerk fitting
b. Apply grease while fan is running and stop when you hear the grease enter the running bearing

Lubricated fan bearings on FGR–001,FGR–002 & FGR–003

4. Add grease with a hand–operated pressure gun until new grease enters the running bearing
a. This is accomplished by using the ultrasonic sensor and headphones to hear when the new grease enters the running bearing
b. Stop adding grease when the grease reaches the bearing to limit excess grease from migrating down the motor shaft and into the windings
Note: Be careful when greasing the fan end bearing of the TEFC (Totally (Totally Enclosed Fan Cooled) motors. Some motors have a spring–relief outlet grease fitting on the fan end that is not accessible. This spring–relief fitting normally does not have to be removed when regreasing. When greasing, take care in the amount of pressure you apply and verify relief is working
5. Putting in too much or too little grease can cause overheating of the motors and result in motor failure. Use this rule of thumb when adding grease to a motor that has been lubricated on a regular basis:
It is better to use a little grease more often than a lot of grease less often
Note: Watch out for motors that were shipped only with the bearings packed and not the fill tube or even the bearing housing
Apply new grease until you can hear it enter the running bearing
6. Now that greasing is complete, leave the relief plug off and run the motor for 10 minutes to expel any excess grease
7. Replace the drain plug and wipe the bearing housing clean
8. Dispose of dirty rags in accordance with Hazardous Waste Guidelines
9. Ensure correct operation of electric motors.

Worker engagement questions are intended to focus attention on the task and ensure uncertainties are addressed. Examples of worker engagement questions are provided below. Worker engagement questions should be tailored to the situation.

Each of the questions listed below will be discussed at each Pre-Job Brief with all affected personnel.

Topic 1M FGR Bearings Lubrication	**Completed (X)**
What permits, permissions, or support are required to safely start this work?	X
What is the most likely thing that could go wrong (not the worst thing) and what, specifically, will prevent it?	X
What can cause us to go beyond the scope of the work?	X
What hazards in the work area may not have been considered during planning of this job	X

Los Alamos NATIONAL LABORATORY

Integrated Work Document (IWD) Part 2
FOD Requirements and Approval for Entry and Area Hazards and Controls
Non-Tenant

IWD No./Work Request No: _____ Revision No.: _____

The Facility Operations Director (FOD) or designee must determine the facility entry and coordination requirements and identify the area environment, safety, health (ESH)/security and safeguards (S&S) hazards and controls associated with the specific activity location.

FOD 8	TA 03	Bldg. 22 & 24	Room	Other Location Inside plant buildings.
FOD Designated Facility Point-of-Contact	Name Nicholas Nelson	Phone 505-665-5508	Pager	Email nelson_n@lanl.gov

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

- ☐ No entry/coordination requirements
- ☒ Schedule work with the FOD
- ☒ Attend Plan of the Day/Plan of the Week (POTD/POTW)
- ☐ Security clearance or escort required
- ☐ Other security requirements (e.g., no cellphone or foreign nationals)
- ☐ Review work under Authorization Basis / Safety Basis / Unreviewed Safety Question (USQ)
- ☐ FOD-designated facility point-of-contact must sign IWD Part 3
- ☒ Facility-specific or other work area training required
- ☒ Check in daily
- ☒ Check out daily
- ☐ Quality issues
- ☒ Non-security escort required
- ☒ Other bounding conditions: Watch Plant specific video, check in and out with plant operations.

Additional Comments:

All work must be approved by the Utilities FOD or OM or OS. POD/POTW – 1:30pm Mon. thru Friday. Evaluate outside ground conditions during cold or wet weather events, wear appropriate foot wear (spiky-plus) in snow and ice conditions. Evaluate inside floor and housekeeping conditions to safely proceed with activities. Check in with Plant Operations Manager/Specialist or Operations Shift Head for final approval to proceed with tasks. All personnel entering any area must view the site specific training video in room 116 (Boiler Control Room), one time requirement. Observe safety signs and floor markings in all buildings and areas. The West end front lobby and office areas of Bldg 22 are considered a no hazard area.

Instructions: In the block below, identify work area hazards that could potentially affect the worker(s) or others. Avoid using the same Part 2, Form 2101 for multiple facilities. Ensure that work area hazards specific to the facility or work location are identified and controlled. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the work area hazards, including any unique or special training required because of work area conditions/hazards.

ESH/S&S WORK AREA HAZARDS AND CONTROLS				
Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	**Work Area Hazard Present**	**Facility Controls/ Preventive Measures/ Bounding Conditions** Specify preventive measures, controls, and bounding conditions for each site hazard	**Reference Documents** List permits, operating manuals, and other procedures (if required in the field)	**Training and Qualification** (*special or unique to the area*)
☐ **No work area hazards**				
Ionizing Radiation Work in posted radiological areas, work with radioactive materials, or work on or near radiation producing devices. **Specify Hazard:**	☐ Yes ☒ No			

IWD No./Work Request No.: _____ Revision No.: _____

ESH/S&S WORK AREA HAZARDS AND CONTROLS				
Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	**Work Area Hazard Present**	**Facility Controls/ Preventive Measures/ Bounding Conditions** Specify preventive measures, controls, and bounding conditions for each site hazard	**Reference Documents** List permits, operating manuals, and other reference procedures	**Training and Qualification** List training requirements
Worker Exposure Working near non-ionizing radiation, beryllium, noise, chemicals, biological hazards, lead, asbestos, temperature/humidity extremes, nanoparticles, cryogens, or high explosives. **Specify Hazards:** Hot Piping, Potential Hot Water/Steam from pipe/fitting openings, Boiler Water Treatment Chemicals, Asbestos.	☒ Yes ☐ No	**All Asbestos is encapsulated and marked, if damaged or found to be damaged, pause work and notify management, for repair or remediation. All Electrical is covered with engineering controls, if controls are removed LOTO required and 2193 required as well as PPE. Not all hot surfaces are marked or covered, whare long sleeves and note uncovered surfaces when working in the plant.**		NA
Energized and Operative Systems Working near energized electrical parts, pressure systems, steam lines; unprotected belts, pulleys, chains, rotating equipment; fuel-fired equipment (other than vehicles); or spark/flame-producing operations. **Specify Hazards:** Electrical, Hot surfaces, ACM, Hot water, Hot steam, High noise, Rotating equipment, Overhead work.	☒ Yes ☐ No	All Asbestos is encapsulated and marked, if damaged or found to be damaged, pause work and notify management, for repair or remediation. All Electrical is covered with engineering controls, if controls are removed LOTO required and 2193 required as well as PPE. Not all hot surfaces are marked or covered, whare long sleeves and note uncovered surfaces when working		NA

		in the plant, be aware of work execution in the area.		
Confined Spaces Entry into tanks, manholes, cooling towers, sumps, or any other area with potentially low oxygen concentration or other hazards such as toxic vapors or engulfment. **Specify Hazards:**	☒ Yes ☐ No	All Confined Spaces are labeled, as permit required or non-permit required.	P 101-27 Conf. Space Confind space permit and evaluation.	Confined Space Training
Elevated Work Surface Unprotected elevated work (e.g., conventional guardrails are not provided) requiring fall protection per P101-20, *Fall Protection Program*, or a surface not designed to support worker(s) and equipment.	☒ Yes ☐ No	Elevated work surfaces should have fall protection if not. Follow LANL requires fall protection when working on a surface higher than 4ft.	P101-20 Fall Protection	Fall Protection
Environmental Activities conducted in areas containing potential release sites, contaminated soil, sensitive species, watercourse, wetlands, floodplains, historical/archeological sites, or other work area element that can impact, or be impacted by, the environment. **Specify Hazards:**	☐ Yes ☒ No			
Security Requirements **Specify:**	☐ Yes ☒ No			
Other Hazards **Specify:** Pests	☒ Yes ☐ No	Call pest control for clean-up if excessive rat droppings, dead rodents, wasp nest, etc in area of task activity.		

I have verified that the items indicated above adequately identify existing and potential area hazards associated with the work location and communicate facility-required controls that will enable safe, secure, and environmentally compliant work execution.

of Mobilith SHC 100 grease into zerk fitting
b. Apply grease while fan is running and stop when you hear the grease enter the running bearing

Lubricated fan bearings on FGR–001,FGR–002 & FGR–003

4. Add grease with a hand–operated pressure gun until new grease enters the running bearing
a. This is accomplished by using the ultrasonic sensor and headphones to hear when the new grease enters the running bearing
b. Stop adding grease when the grease reaches the bearing to limit excess grease from migrating down the motor shaft and into the windings
Note: Be careful when greasing the fan end bearing of the TEFC (Totally (Totally Enclosed Fan Cooled) motors. Some motors have a spring–relief outlet grease fitting on the fan end that is not accessible. This spring–relief fitting normally does not have to be removed when regreasing. When greasing, take care in the amount of pressure you apply and verify relief is working
5. Putting in too much or too little grease can cause overheating of the motors and result in motor failure. Use this rule of thumb when adding grease to a motor that has been lubricated on a regular basis: It is better to use a little grease more often than a lot of grease less often
Note: Watch out for motors that were shipped only with the bearings packed and not the fill tube or even the bearing housing
Apply new grease until you can hear it enter the running bearing
6. Now that greasing is complete, leave the relief plug off and run the motor for 10 minutes to expel any excess grease
7. Replace the drain plug and wipe the bearing housing clean
8. Dispose of dirty rags in accordance with Hazardous Waste Guidelines
9. Ensure correct operation of electric motors.

Form 2101

Los Alamos NATIONAL LABORATORY

Integrated Work Document (IWD) Part 2
FOD Requirements and Approval for Entry and Area Hazards and Controls
Non-Tenant

IWD No./Work Request No: _____ Revision No.: _____

The Facility Operations Director (FOD) or designee must determine the facility entry and coordination requirements and identify the area environment, safety, health (ESH)/security and safeguards (S&S) hazards and controls associated with the specific activity location.

FOD	TA	Bldg.	Room	Other Location
8	03	22 & 24		Inside plant buildings.
FOD Designated Facility Point-of-Contact	Name Nicholas Nelson	Phone 505-665-5508	Pager	Email nelson_n@lanl.gov

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

- ☐ No entry/coordination requirements
- ☒ Schedule work with the FOD
- ☒ Attend Plan of the Day/Plan of the Week (POTD/POTW)
- ☐ Security clearance or escort required
- ☐ Other security requirements (e.g., no cellphone or foreign nationals)
- ☐ Review work under Authorization Basis / Safety Basis / Unreviewed Safety Question (USQ)
- ☐ FOD-designated facility point-of-contact must sign IWD Part 3
- ☒ Facility-specific or other work area training required
- ☒ Check in daily
- ☒ Check out daily
- ☐ Quality issues
- ☒ Non-security escort required
- ☒ Other bounding conditions: Watch Plant specific video, check in and out with plant operations.

Additional Comments:

All work must be approved by the Utilities FOD or OM or OS. POD/POTW – 1:30pm Mon. thru Friday. Evaluate outside ground conditions during cold or wet weather events, wear appropriate foot wear (spiky-plus) in snow and ice conditions. Evaluate inside floor and housekeeping conditions to safely proceed with activities. Check in with Plant Operations Manager/Specialist or Operations Shift Head for final approval to proceed with tasks. All personnel entering any area must view the site specific training video in room 116 (Boiler Control Room), one time requirement. Observe safety signs and floor markings in all buildings and areas. The West end front lobby and office areas of Bldg 22 are considered a no hazard area.

Instructions: In the block below, identify work area hazards that could potentially affect the worker(s) or others. Avoid using the same Part 2, Form 2101 for multiple facilities. Ensure that work area hazards specific to the facility or work location are identified and controlled. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the work area hazards, including any unique or special training required because of work area conditions/hazards.

of Mobilith SHC 100 grease into zerk fitting
b. Apply grease while fan is running and stop when you hear the grease enter the running bearing

Lubricated fan bearings on FGR–001,FGR–002 & FGR–003

4. Add grease with a hand–operated pressure gun until new grease enters the running bearing
a. This is accomplished by using the ultrasonic sensor and headphones to hear when the new grease enters the running bearing
b. Stop adding grease when the grease reaches the bearing to limit excess grease from migrating down the motor shaft and into the windings
Note: Be careful when greasing the fan end bearing of the TEFC (Totally (Totally Enclosed Fan Cooled) motors. Some motors have a spring–relief outlet grease fitting on the fan end that is not accessible. This spring–relief fitting normally does not have to be removed when regreasing. When greasing, take care in the amount of pressure you apply and verify relief is working
5. Putting in too much or too little grease can cause overheating of the motors and result in motor failure. Use this rule of thumb when adding grease to a motor that has been lubricated on a regular basis:
It is better to use a little grease more often than a lot of grease less often
Note: Watch out for motors that were shipped only with the bearings packed and not the fill tube or even the bearing housing
Apply new grease until you can hear it enter the running bearing
6. Now that greasing is complete, leave the relief plug off and run the motor for 10 minutes to expel any excess grease
7. Replace the drain plug and wipe the bearing housing clean
8. Dispose of dirty rags in accordance with Hazardous Waste Guidelines
9. Ensure correct operation of electric motors.

Worker engagement questions are intended to focus attention on the task and ensure uncertainties are addressed. Basic worker engagement questions are provided below. Additional worker engagement questions should be tailored to the situation.

Each of the questions listed below will be discussed at each Pre-Job Brief with all affected personnel.

Nov. 7th 2023

Topic 1M FGR Fans Bearing Lubrication	**Completed (X)**
What permits, permissions, or support are required to safely start this work?	X
What is the most likely thing that could go wrong (not the worst thing) and what, specifically, will prevent it?	X
What can cause us to go beyond the scope of the work?	X
What hazards in the work area may not have been considered during planning of this job?	X

Los Alamos NATIONAL LABORATORY

Integrated Work Document (IWD) Part 2
FOD Requirements and Approval for Entry and Area Hazards and Controls
Non-Tenant

IWD No./Work Request No: _____ Revision No.: _____

The Facility Operations Director (FOD) or designee must determine the facility entry and coordination requirements and identify the area environment, safety, health (ESH)/security and safeguards (S&S) hazards and controls associated with the specific activity location.

FOD 8	TA 03	Bldg. 22 & 24	Room	Other Location Inside plant buildings.
FOD Designated Facility Point-of-Contact	Name Nicholas Nelson	Phone 505-665-5508	Pager	Email nelson_n@lanl.gov

General Requirement/Guidance:

- Workers in areas that have building or facility-specific training (FST) shall take the FST unless they are escorted by someone who is current in the training.
- Any abnormal event or condition, whether within or beyond the bounds of the assigned work area, must be reported to supervisors or first-line managers and the FOD.

Entry and Coordination Requirements (*check one or more of the following*):

- ☐ No entry/coordination requirements
- ☒ Schedule work with the FOD
- ☒ Attend Plan of the Day/Plan of the Week (POTD/POTW)
- ☐ Security clearance or escort required
- ☐ Other security requirements (e.g., no cellphone or foreign nationals)
- ☐ Review work under Authorization Basis / Safety Basis / Unreviewed Safety Question (USQ)
- ☐ FOD-designated facility point-of-contact must sign IWD Part 3
- ☒ Facility-specific or other work area training required
- ☒ Check in daily
- ☒ Check out daily
- ☐ Quality issues
- ☒ Non-security escort required
- ☒ Other bounding conditions: Watch Plant specific video, check in and out with plant operations.

Additional Comments:

All work must be approved by the Utilities FOD or OM or OS. POD/POTW – 1:30pm Mon. thru Friday. Evaluate outside ground conditions during cold or wet weather events, wear appropriate foot wear (spiky-plus) in snow and ice conditions. Evaluate inside floor and housekeeping conditions to safely proceed with activities. Check in with Plant Operations Manager/Specialist or Operations Shift Head for final approval to proceed with tasks. All personnel entering any area must view the site specific training video in room 116 (Boiler Control Room), one time requirement. Observe safety signs and floor markings in all buildings and areas. The West end front lobby and office areas of Bldg 22 are considered a no hazard area.

Instructions: In the block below, identify work area hazards that could potentially affect the worker(s) or others. Avoid using the same Part 2, Form 2101 for multiple facilities. Ensure that work area hazards specific to the facility or work location are identified and controlled. Specify the facility controls and preventive measures that must be implemented by the worker(s) to protect against the work area hazards, including any unique or special training required because of work area conditions/hazards.

ESH/S&S WORK AREA HAZARDS AND CONTROLS				
Work Area Hazards/Concerns Identify site hazards and concerns that could potentially affect the worker(s) or others.	**Work Area Hazard Present**	**Facility Controls/ Preventive Measures/ Bounding Conditions** Specify preventive measures, controls, and bounding conditions for each site hazard	**Reference Documents** List permits, operating manuals, and other procedures (if required in the field)	**Training and Qualification** (*special or unique to the area*)
☐ **No work area hazards**				
Ionizing Radiation Work in posted radiological areas, work with radioactive materials, or work on or near radiation producing devices. **Specify Hazard:**	☐ Yes ☒ No

Subject: AI 856 P100-R2M5 LANL TA-3 Power Plant Combustion Turbine Stack Test Final Report

Dear Compliance Reporting Manager:

Los Alamos National Laboratory is submitting the final report for the annual TA-3 power plant combustion turbine (Unit ID TA-3-22-CT-1) emission stack test completed on December 5, 2023. The testing was completed by a subcontractor, Compliance Services and Testing, LLC. The annual emission stack test is required per the Title V Permit P100-R2M5, Condition A1307.H. The stack test results show that the combustion turbine was below the permitted limits for all tested emissions. This report will be submitted through the NMED-AQB Secure Extranet Portal and in the Semi-Annual Monitoring Report for July-December 2023.

Thank you for your review of this stack test report. Please contact Katelyn Mahoney at (505)-396-0619 with any questions you may have.

Sincerely,

u. Detailed driving directions from nearest New Mexico town:

T19N, R6E, S22, approximately 3 miles south of Los Alamos, NM in Los Alamos County. Visitors must be fully vaccinated or have a negative COVID-19 test conducted within three days prior to their arrival on-site. A visitors badge is required for each visitor when working on or visiting LANL property. Arrangements must be made with the LANL contact prior to the visit. Visitor badges will be provided at the TA-3-22 Power Plant (see map). The LANL contact will escort the visitors to the Compressed Gas Turbine Generator (CGTG). From the intersection of Diamond Drive and Trinity Drive in Los Alamos, take Diamond Drive South across Omega Bridge, continue to the traffic light. At the light, turn right toward LANL TA-3 (toward West Jemez Road). Proceed through the Vehicle Access Portal/Security Post to the light at East Jemez and Diamond Drive. Turn left at the light and continue through LANL TA-3 to the Power Plant. The Power Plant is past the first light and is the first large building on the left. The CGTG is located behind the TA-3 Power Plant, but parking is in the Power Plant parking lot.

24.6 MW	**100**	**Yes** ☐ **No** ☒	**N/A**

i. If expected load during test is less than 90% of capacity, explain:

NOTE – Failure to test at 90-100% of permitted load will limit unit operation to 110% of tested load until a new initial compliance test is conducted.

PLANT OR UNIT OPERATING PARAMETERS TO BE MONITORED

j. List and explain the plant operating parameters that will be monitored and applicable permit conditions or regulatory standards.

Total natural gas volume and flow rate will be monitored during the test. The electrical output of the generator will be monitored.

VII. ADDITIONAL DETAILS (where applicable)

RATA and INSTRUMENTAL ANALYZER CALIBRATION PROCEDURES

a. Do any of the methods you are proposing utilize instrumental analyzers (i.e.; EPA Methods 3A, 6C, 7E, 10, 18, 25/25A, 320 etc.)? If yes, briefly describe analyzer calibration procedures and/or calibration standard procedures. Enter the highest pollutant concentration expected and the proposed concentrations of calibration gases.	☐ Yes	☐ No

As described in the methods.

SAMPLING TRAIN LEAK CHECK PROCEDURES

b. Do any of the methods you are proposing utilize the EPA Method 5 sampling train (i.e.; EPA Methods 1-4, 5, 17, 26/26A, 29, etc.)? If yes, briefly describe sampling train and pitot tube leak check procedures:	☐ Yes	☒ No

EPA METHOD 19 IN LIEU OF EPA METHODS 1-4

c. Are you proposing to utilize EPA Method 19 in lieu of EPA Methods 1-4? If yes, explain why you believe this proposal is justified:	☒ Yes	☐ No

Method 19 with the use of a calibrated fuel meter and current fuel gas analysis.

PLEASE NOTE – EPA Method 19 may be utilized in lieu of EPA Methods 1-4, subject to the approval of the Department. If you are proposing to utilize EPA Method 19 in lieu of EPA Methods 1-4, you MUST include a recent fuel gas heating value analysis as well as a recent fuel flow meter calibration certificate, preferably conducted on the day of the test, but no earlier than three months prior to the test date. If the analyses have been conducted prior to the test date, you MUST append the certificates to the protocol. If conducted on the day of the test, you MUST append the certificates to the final test report.

Introduction

Exhaust emissions testing was conducted on a natural gas-fired centrifugal internal combustion engine (turbine) in service at Los Alamos National Laboratory's TA-3 Power Plant. The purpose of this test was to demonstrate compliance with the requirements specified in the New Mexico Environment Department NMED-AQB Title V Permit Number P100-R2M5 annual testing requirements.

Testing on Unit #TA-3-22 was performed at the maximum load available at the time of the test (92.6%). The testing followed the procedures set forth in the ASTM D6522-00. Oxides of nitrogen (NO_X defined as NO + NO_2) and carbon monoxide (CO) oxygen (O_2), and carbon dioxide (CO_2) were measured from the exhaust stack to derive the mass emission rates of the compounds of interest. NO_X and CO are the criteria pollutants of interest which are limited by the air permit. Compliance Services and Testing conducted all gaseous sampling on December 5, 2023.

Test Participants:	**CST** Chris Spencer – Director Austin Brunick – Emissions Technician **LANL** Katelyn Mahoney – EPC-CP Joe Baughman - Supervisor Roselia Garcia - STR
Test Date:	December 5, 2023
Location:	TA-3 Power Station located within Los Alamos National Laboratory, Los Alamos, New Mexico
Test Methods:	ASTM 6522-00 Method 19 - Exhaust Flow Rate

Summary of Results

NO_X has a permitted emission limit of 23.8 pounds per hour (lbs/hr) and 59.4 tons per year (tpy). CO has a permit limit of 29.0 lbs/hr and 72.3 tpy. The tons per year mass emission rates are limited by annual fuel consumption of no more than 1400 MMSCF. The annual fuel consumption limit was divided by the average hourly fuel consumption during the test to calculate the maximum allowable annual hours of operation at full load (6310.1 hours per year). The average lb/hr emission values from the testing were then multiplied by these annual hours of operation number to calculate estimated ton per year emissions. NO_X also has a limit of 25 ppmvd (parts per million by volume on a dry basis) at 15% O2. The results show that NO_X and CO are below the permitted limits.

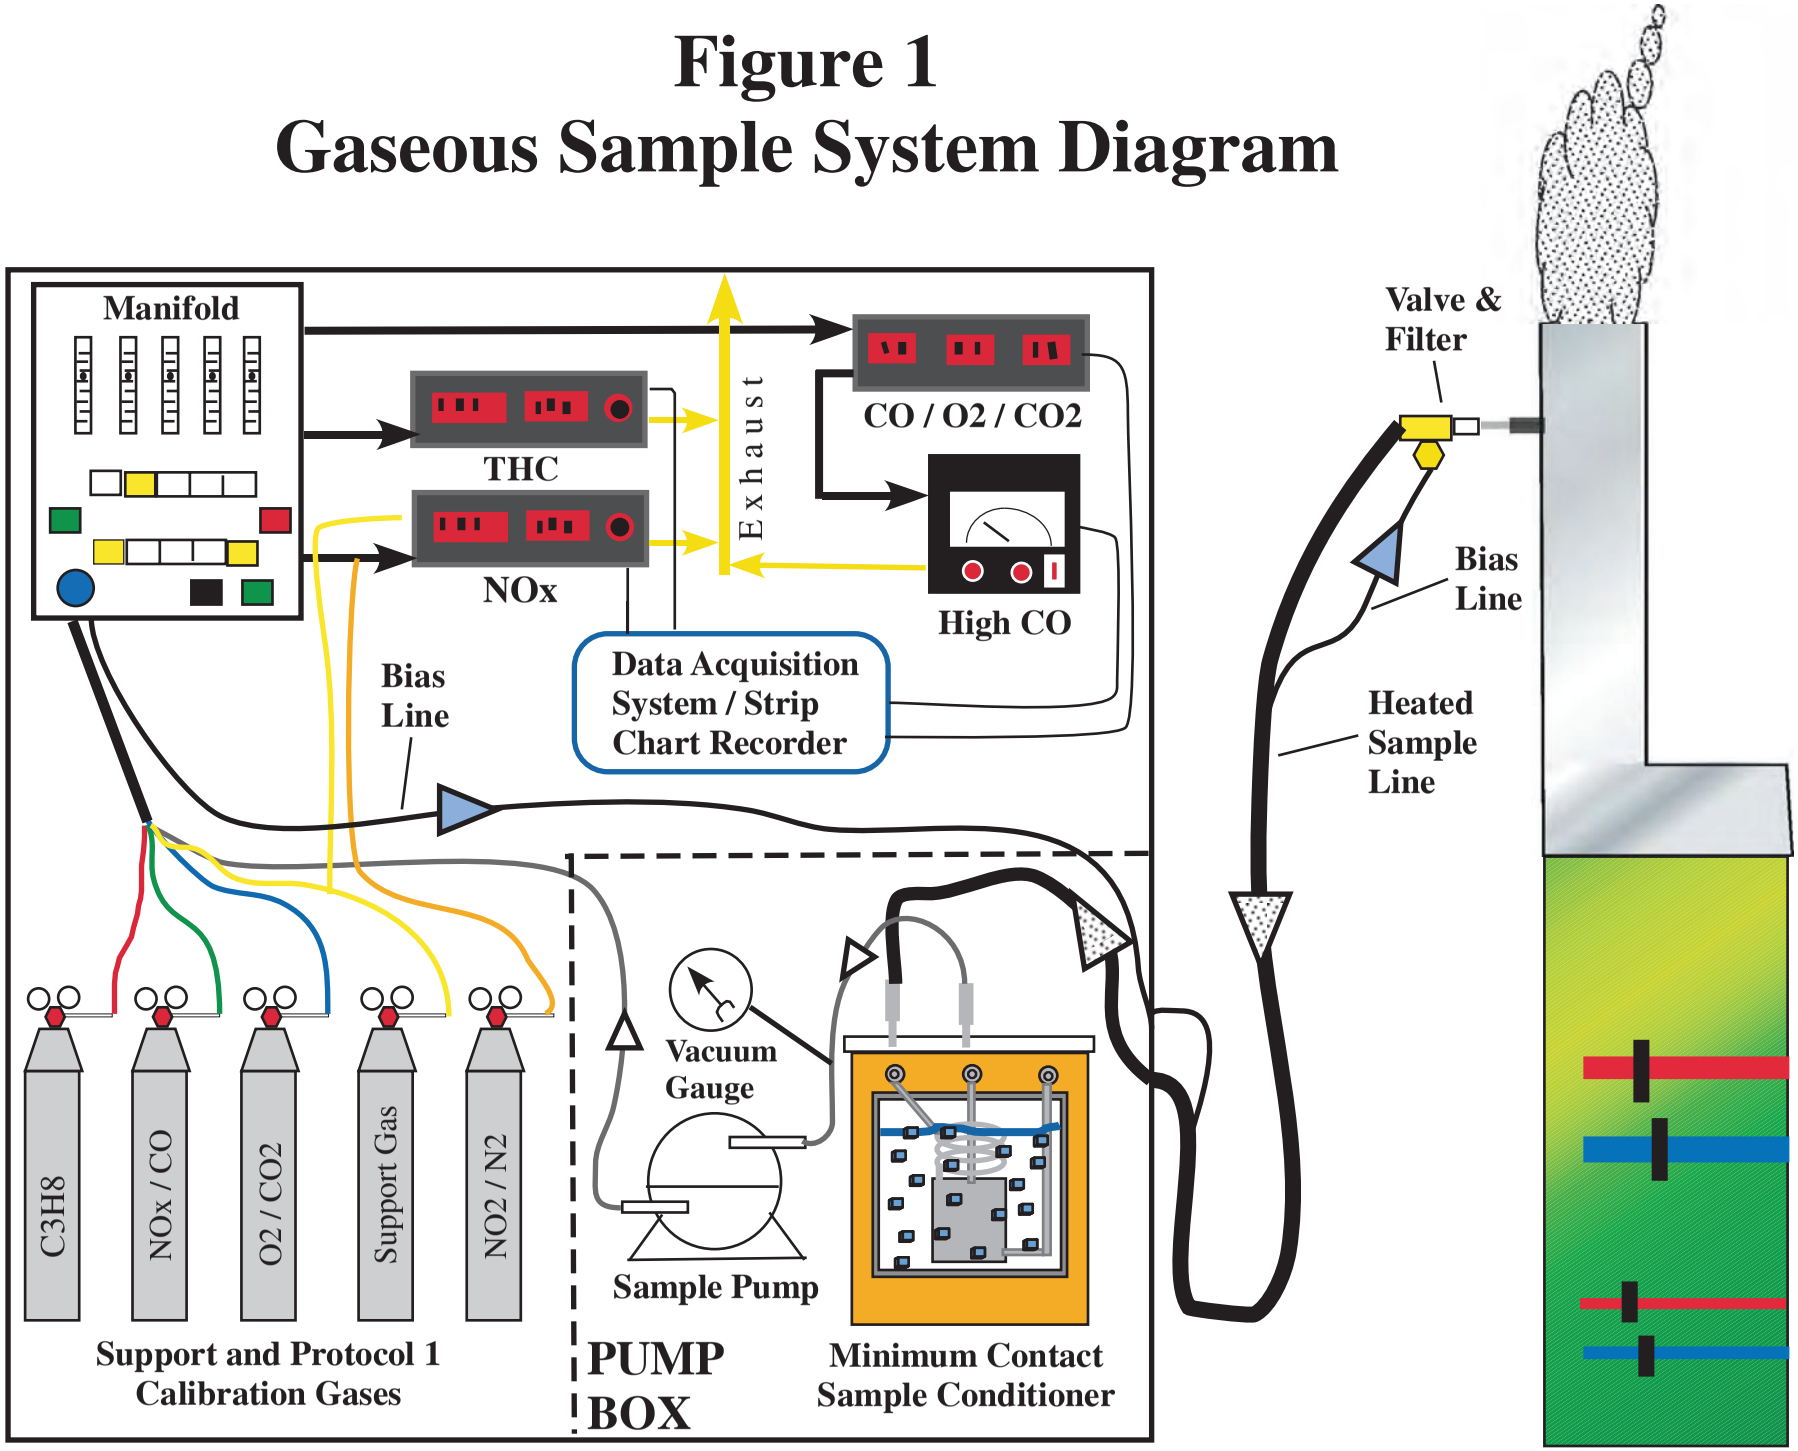
Table 2: Summarized Results

Unit #	SN	Load	NOx 15% O2	NOx pph/*tpy	CO pph/*tpy
Limits	***---***	***≥90%***	***25***	***23.8/59.4***	***29.0/72.3***
TA-3-22	2011	92.6%	15.27	13.83/41.08	5.81/17.27

*tons per year are limited by annual fuel consumption of no more than 1400 MMSCF

Figure 1 shows the sample system diagram used for the testing and Table 3 lists the analytical analyzers and sensitivities. Appendix A contains the engine, compressor, and control equipment operating data and tabular results compared with the emission limits along with the field data sheets. The load, horsepower, and turbine/generator operating parameters along with the analytical results are listed on the Summary of Results (SOR) page produced for the turbine. Also included on the SOR is the date of the test, location of unit, serial number, and calculated mass emission rates compared to the permitted limits. Appendix B contains the example calculations. Appendix C contains the fuel analysis and CST's fuel calculations and the fuel meter calibration data. Appendix D contains the quality assurance and quality control documentation. Appendix E contains the calibration gas certificate and the datalog record is in Appendix F.

Process Description



The turbine is a Rolls Royce RB211-6761 DLE centrifugal internal combustion engine that bears the serial number 2011. The turbine is rated for 27 MW (36,207 Horsepower). The turbine is used to generate electricity for use at Los Alamos National Laboratory (LANL) or placing on the electrical grid for outside consumption.

Analytical Technique

Stack gas entered the instrumental sampling system through a stainless-steel probe placed into the stack with an in-line 90-micron filter and then was transported via 3/8-inch heat-traced Teflon® tubing to a specially designed stainless-steel minimum-contact condenser which dried the sample without removing the pollutants of interest. The sample was then passed to the gas manifold through 3/8" Teflon® tubing via a stainless steel/Teflon® diaphragm vacuum pump. The sample was partitioned to the analyzers through glass and stainless-steel rotameters that control the flow of the sample and did not allow a variance of more than 10% during the tests. The remaining gas was then vented outside of the climate-controlled laboratory. The gas manifold also allowed for the convenient introduction of calibration gases. Once the equipment was placed into the stack and hooked into the sampling manifold in the mobile laboratory, the desired ranges were selected by observing the stack effluents of interest. Each instrument was then calibrated, and the testing proceeded. All testing was performed from the stack centroid, each being bracketed by a zero and upscale analyzer drift calibration check.

Each test consisted of three consecutive twenty-minute test runs and was completed on-site. The stack gas analysis for O_2/CO_2 diluent concentrations were monitored with a paramagnetic detector and a non-dispersive infrared (NDIR) detector, respectively. NO_X emissions were quantified using a chemiluminescence detector and CO emission concentrations were quantified with an NDIR analyzer. This analyzer was equipped with a gas correlation filter, which also eliminates any interference from moisture, CO_2, and other combustion products. All gaseous data from the continuous monitoring instruments were recorded on an Omega OMB-DAQ-56 data acquisition system and was recorded at one-minute intervals. Each instrument was calibrated per protocol procedures and none were operated outside the acceptable variance limits. The volumetric flow rate was determined by EPA Method 19 and validated with a current fuel gas composition analysis and a calibrated fuel consumption meter. The volumetric flow rate was factored with the observed stack concentration and species-specific weight factors to derive the calculated mass emission rates. Details of these calculations are found in the example calculation section of the report.

Testing Conducted by Compliance Services and Testing

Table 3: List of Instrumentation, Detection Principles and Data Recording Devices

Analytical Instrumentation

Parameter	Models and Manufacturers	Common Operating Ranges	Minimum Sensitivity	Typical Response Time (sec)	Detection Principle
Sample System 1					
NOx	**California Analytical Instruments Model 400 CLD SN: W01059**	30 ppm 100 ppm 300 ppm 1000 ppm 3000 ppm	0.1 ppm	5	Thermal reduction of NO2 to NO. Chemiluminescent reaction of NO with excess of ozone. Detection by Photo-multiplier or Photodiode. Inherently linear for ranges listed.
CO	**California Analytical Instruments Model ZRE SN: A8P9061T**	200 ppm 1000 ppm	0.1 ppm	5	Single beam non-dispersive infrared absorption.
O_2	**California Analytical Instruments Model ZRE SN: A8P9061T**	10% 25%	0.01%	2	Paramagnetic by magneto-dynamic type measuring. All detection principals are inherently linear over a wide range.
CO_2	**California Analytical Instruments Model ZRE SN: A8P9061T**	10% 20%	0.01%	5	Infrared absorption, analog linearization, solid state detector.
CO	**California Analytical Instruments Model ZRE SN: A8P9061T**	1000 ppm 10000 ppm	0.1%	5	Single beam non-dispersive infrared absorption.
THC	**California Analytical Instruments Model 600M HFID SN: Z10046**	10 ppm 100 ppm 1000 ppm 10000 ppm	0.1 ppm	5	Flame Ionization Detection to determine the total hydrocarbons.
Sample System 2					
NOx	**California Analytical Instruments Model 400 CLD SN: 6N07002**	30 ppm 100 ppm 300 ppm 1000 ppm 3000 ppm	0.1 ppm	5	Thermal reduction of NO2 to NO. Chemiluminescent reaction of NO with excess of ozone. Detection by Photo-multiplier or Photodiode. Inherently linear for ranges listed.
CO	**California Analytical Instruments Model 300 SN: 1N05011**	200 ppm 1000 ppm	0.2 ppm	5	Infrared absorption, gas filter correlation detector. Microprocessor based linearization.
O_2	**California Analytical Instruments Model 300 SN: 1N05011**	5% 10% 25%	0.1%	2	Paramagnetic by magneto-dynamic type measuring. All detection principals are inherently linear over a wide range.
CO_2	**California Analytical Instruments Model 300 SN: 1N05011**	10% 20%	0.02%	5	Infrared absorption, analog linearization, solid state detector.
THC	**California Analytical Instruments 100 SN: T11028**	1000 ppm 5000 ppm	0.2 ppm	5	Non-dispersive Infrared absorption. Correlation filter with a mass flow sensor.

Data Recorder

Parameter	Models and Manufacturers	Common Operating Speeds	Measuring Range	Detection Principle
20 channels	**Omega OMB-DAQ-56 SN: 271775**	625 ms to 6.25 secs	+/- 15 Volts	Voltage differential to a CPU.

CST reserves the right to substitute equivalent model analyzers that meet the specifications of the test methods.
Higher ranges available by sample dilution. Other ranges available via data logger/recorder signal attenuation.
Operating range is defined by the calibration gases used during the test (per EPA Methods 7e and 25b).

Quality Assurance Activities

Each instrument's response was checked and adjusted in the field prior to the collection of data via direct inject multi-point calibration. The instrument's linearity was checked by first adjusting the zero and span responses to zero (nitrogen) and an upscale calibration gas in the range of the expected concentrations. The instrument response was then challenged with other calibration gases of known concentration and accepted as being linear if the response of the other calibration gases agreed within ± 2% of span of the predicted values. Appendix D contains Instrumental Analysis Quality Assurance Worksheets, which summarize the results of these calibration error tests.

The sampling system's integrity was tested by comparing the responses of the analyzers to calibration gases introduced via two paths. The first path was into the analyzer via the zero/span calibration manifold. The second path was to introduce a calibration gas into the sample system at the sample probe. Any difference in the instrument responses by these two methods was attributed to sampling system bias or leakage. These bias checks were conducted before and after dismantling or setting up the sample system, and as required by the various methods. Examination of the datalog excerpt and Instrumental Analysis Quality Assurance Data worksheet in Appendix D show that the analyzer response via both sample paths agreed within acceptable limits in all cases.

Interference response tests on the NO_x, CO, CO_2, and O_2 instruments were conducted during the response time / bias check. The sum of the interference response for each analyzer is less than ± 5% of the applicable full-scale span value.

The efficiency of the NO_2 to NO converter in the NO_x analyzer was checked by introducing a certified mixture of NO_2 in N_2 standard gas into the analyzer. The criterion for acceptability is a demonstrated NO_x converter efficiency greater than 90%. The datalog excerpt that demonstrate the converter efficiency test are available in Appendix F. The above-mentioned quality assurance worksheets of Appendix D also summarize the results of the converter efficiency test.

The residence time of the sampling and measurement system was estimated using the pump flow rate and the sampling system volume. The pump's rated flow is 0.625 cfm at 10 psig. The sampling system volume is approximately 0.034 cf, therefore, the sample residence time is approximately 3.3 seconds. The sampling system purge time is twice of the longest response time, which is typically at or near 120 seconds.

Response time tests for individual instruments were conducted prior to sampling and noted in the Daily Assurance Worksheet of Appendix D and on the datalog record of Appendix F.

The control gases used to calibrate the instruments were analyzed and certified by the compressed gas vendors to ± 1% accuracy for the NO_x/CO, and O_2/CO_2 gases. EPA Protocol Number 1 was used, where applicable, to assign the concentration values traceable to the National Bureau of Standards, Standard Reference Materials (SRM's). The gas calibration sheets as prepared by the vendor are contained in Appendix E. The calibration certificate for the dry gas meter used is also contained in Appendix E.

Before and after the test, the analyzers were checked for zero and span drift. This allowed each test run to be bracketed by calibrations and documents the precision of the data just collected. The criterion for acceptable data is that the instrument drift is no more than ± 3% of the full-scale response. The quality assurance worksheets in Appendix D summarize all multi-point calibration checks and zero to span checks performed during the tests. These worksheets (as prepared from the datalog records of Appendix F) show that no drifts more than the criteria specified by the respective methods existed.

CST collected and reported the enclosed test data in accordance with the procedures and quality assurance activities described in this test report. CST makes no warranty as to the suitability of the test methods and assumes no liability relating to the interpretation and use of the test data.

Appendix B:
Example Calculations

Example Calculations

Drift Corrected Emission Concentrations

Formula

$$C_{GAS} = (Ç - Co) \times \frac{C_{MA}}{C_M - Co} \quad \textit{(eq. 7E-5)}$$

All Calculations Refer to Test Run 1, Unit # TA-3-22-CT-1

$Ç_{NOx}$ =	Raw Concentration of NOx	= 15.29 ppmv
Co =	Avg. of Initial and Final Zero Checks	= 0.00 ppmv
C_M =	Avg. of Initial and Final Span Checks	= 24.47 ppmv
C_{MA} =	Certified Concentration of Span Gas	= 25.00 ppmv

C_{NOx} = (15.29 - 0.00) x 25.00 / (24.47 - 0.00) = 15.63 ppmv

$Ç_{CO}$ =	Raw Concentration of CO	= 10.77 ppmv
Co =	Avg. of Initial and Final Zero Checks	= -0.06 ppmv
C_M =	Avg. of Initial and Final Span Checks	= 24.79 ppmv
C_{MA} =	Certified Concentration of Span Gas	= 25.00 ppmv

C_{CO} = (10.77 + 0.06) x 25.00 / (24.79 + 0.06) = 10.90 ppmv

$Ç_{O2}$ =	Raw Concentration of O2	= 14.63 %
Co =	Avg. of initial and final zero bias checks	= 0.14%
C_M =	Avg. of initial and final span bias checks	= 9.94%
C_{MA} =	Actual concentration of span gas	= 10%

C_{O2} = (14.63 - 0.14) x 10.00 / (9.94 - 0.14) = 14.79%

$Ç_{CO2}$ =	Raw Concentration of CO2	= 3.56%
Co =	Avg. of initial and final zero bias checks	= 0.08%
C_M =	Avg. of initial and final span bias checks	= 10.17%
C_{MA} =	Actual concentration of span gas	= 10.00%

C_{CO2} = (3.56 - 0.08) x 10.00 / (10.17 - 0.08) = 3.45%

Fo Calculation to Verify O2 / CO2 Measurements (Eq. 3b-1)

C_{O2} =	Corrected Concentration of O2	= 14.79%
C_{CO2} =	Corrected Concentration of CO2	= 3.45%
Th. Fo =	Theoretical Fo from FGA	= 1.76

$$Fo = \frac{(20.9 - O2\%)}{CO2\%}$$

$$\mathbf{Fo} = \frac{(20.9 - 14.79)}{3.45} = \mathbf{1.77}$$

Adjust Measured Concentrations to 15% O2 (Eq. 60.335)

$$\mathbf{C_X @ 15\% O2} = C_X\,(ppmv) \times \frac{5.9}{(20.9 - O2\%)}$$

$$\mathbf{C_{NOx} @ 15\% O2} = 15.63 \times \frac{5.9}{(20.9 - 14.79)} = \mathbf{15.09} \ \mathbf{@ 15\% O2}$$

Example Calculations

Mass Emission Rates via EPA Method 19

Measured Data and Constants from Test Run 1

C_{NOx} =	Corrected Concentration of NOx	=	15.63	ppmv
C_{CO} =	Corrected Concentration of CO	=	10.90	ppmv
Horsepower =	Observed Horsepower	=	33605	Hp
lb / mole =	EPA STP for Ideal Gas	=	385.15	SCF
lbs / hr to tpy =	Conversion Factor based on Fuel Usage	=	2.9707	hrs-tons / lbs-yr
C_F =	PPMV Normalization	=	1.00E-06	1 / ppmv
MW_{NOx} =	Molecular Weight of NOx	=	46	lb / lb-mol
MW_{CO} =	Molecular Weight of CO	=	28	lb / lb-mol

Stack Gas Flow Rate via Method 19 (eq. 19-1)

Q_F =	Fuel Flow (Measured)	=	236200	SCF/H
F_{BTU} =	Fuel Higher Heating Value	=	1049	Btu/SCF
F_{O2} =	O2 F-Factor	=	8660	DSCF/MMBtu
C_{O2} =	Corrected Concentration of O2	=	14.79	%
$Q_{S\ M19}$ =	Q_F x F_{BTU} x F_{O2} x 10^-6 x $\frac{20.9}{(20.9 - \%O2)}$			DSCF/H
$Q_{S\ M19}$ =	236200 x 1049 x 8660 x 3.42 x 1.00E-06			
$Q_{S\ M19}$ =	**7,338,188**	**DSCF/H**		

Formulas

Pounds per Hour (lbs/hr)

E_x (lb/hr) = C_x x C_F x Q_S x { MW_x / (lb / mole) }

Tons per Year (tpy)

E_x (tpy) = E_x (lb/hr) x { Fuel Usage (hr / yr) / 2000 (lb / ton) }

Calculated Mass Emission Rates From Method 19 Exhaust Flow Rate

E_{NOx}

lbs/hr = 15.63 x 1.00E-06 x 7.34E+06 x $\frac{46}{385.15}$ = **13.70**

tpy = 13.70 lb/hr x 2.9707 $\frac{\text{hrs-ton}}{\text{lbs-yr}}$ = **40.69**

E_{CO}

lbs/hr = 10.90 x 1.00E-06 x 7.34E+06 x $\frac{28}{385.15}$ = **5.81**

tpy = 5.81 lb/hr x 2.9707 $\frac{\text{hrs-ton}}{\text{lbs-yr}}$ = **17.27**

Quality Assurance Activities

Quality Assurance Report
Converter Efficiency Test, Interference Test, Response Time, and Bias Calibration Results

NOx Converter Effeciency Check

Method: *7E Section 8.2.4*
Frequency: *Before each field test*
Criteria: *Equal to or greater than 90% conversion efficiency*

Test Date: 12/5/23 Technician: CS

NO2	*Results*
Certified Value	49.00 ppmv
Observed Value	47.43 ppmv
Converter Effeciency	96.80%

Interference Response Checks

Method: *7E Section 8.2.7*
Frequency: *Prior to initial use in the field or after major alteration or modification*
Criteria: *Sum of responses < 2.5 % of calibration span*

Test Date: 12/5/23 Technician: CS

Interferrence Test Gases		**Analyzer Response (ppmv or % as applicable)**					
Type Gas	*Conc.*	*NOx*	*CO*	*SO2*	*THC*	*O2*	*CO2*
NOx in N2	25.0 ppm	---	N/A	---	---	0.01	0.00

Mass Flow Controller Annual Calibration

Make: Environics
Model: 4040
Serial Number: 4456

Calibration Date: 11/6/23
Next Calibration Date: 11/5/24
Technician: CS

The mass flow controllers (MFC) in use with this gas dilution system was calibrated with a Bios Defender Model 530 High Flow. This calibration was performed with nitrogen and was corrected to standard reference temperature (68° F) and pressure (29.92" Hg). The data shown is performance data taken after the calibration of the gas dilution system. Acceptable criteria for pass/fail is a true flow value +/- 10% within the set flow.

Cylinder #:	EB0097397
Concentration:	47.8 +/- 0.8 ppm ABS
Exp Date:	9/21/2021

Component:	Nitrogen Dioxide
Reference Standard:	PRM
Cylinder #:	D562925
Concentration:	75.0 +/- 1.1 ppm ABS
Exp Date:	2/2/2019

CERTIFICATION INSTRUMENTS

Component:	Nitrogen Dioxide
Make/Model:	CAI 600
Serial Number:	Y09003
Measurement Principle:	CHEMI
Last Calibration:	1/19/2021

Notes:

The certification was performed by Global Calibration Gases, LLC, Sarasota, FL and according to EPA Traceability Protocol for Assay and Certification Standards May 2012, using procedure G1 and/or G2. U.S. EPA PGVP Vendor ID number: N22021
The expanded uncertainty listed for each component was calculated at a coverage factor of k=2 and at level of confidence of 95%

Analyst: Signature on file Date: 1/19/2021

CERTIFICATE OF ANALYSIS

Grade of Product: EPA PROTOCOL STANDARD

Customer:	COMPLIANCE SERVICES AND TESTING LLC		
Part Number:	E03NI99E15A0360	Reference Number:	163-402761424-1
Cylinder Number:	ALM051331	Cylinder Volume:	144.0 CF
Laboratory:	124 - Pasadena (SG06) - TX	Cylinder Pressure:	2015 PSIG
PGVP Number:	A32023	Valve Outlet:	660
Gas Code:	CO,NO,NOX,BALN	Certification Date:	Jun 20, 2023

Expiration Date: Jun 20, 2031

Certification performed in accordance with "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards (May 2012)" document EPA 600/R-12/531, using the assay procedures listed. Analytical Methodology does not require correction for analytical interference. This cylinder has a total analytical uncertainty as stated below with a confidence level of 95%. There are no significant impurities which affect the use of this calibration mixture. All concentrations are on a mole/mole basis unless otherwise noted. The results relate only to the items tested. The report shall not be reproduced except in full without approval of the laboratory. Do Not Use This Cylinder below 100 psig, i.e. 0.7 megapascals.

ANALYTICAL RESULTS

CERTIFICATE OF ANALYSIS

Grade of Product: EPA PROTOCOL STANDARD

Part Number:	E03NI99E15A1117	Reference Number:	122-402576533-1
Cylinder Number:	SG9153517BAL	Cylinder Volume:	144.0 CF
Laboratory:	124 - Durham (SAP) - NC	Cylinder Pressure:	2015 PSIG
PGVP Number:	B22022	Valve Outlet:	660
Gas Code:	CO,NO,NOX,BALN	Certification Date:	Oct 31, 2022

Expiration Date: Oct 31, 2030

Certification performed in accordance with "EPA Traceability Protocol for Assay and Certification of Gaseous Calibration Standards (May 2012)" document EPA 600/R-12/531, using the assay procedures listed. Analytical Methodology does not require correction for analytical interference. This cylinder has a total analytical uncertainty as stated below with a confidence level of 95%. There are no significant impurities which affect the use of this calibration mixture. All concentrations are on a mole/mole basis unless otherwise noted. The results relate only to the items tested. The report shall not be reproduced except in full without approval of the laboratory. Do Not Use This Cylinder below 100 psig, i.e. 0.7 megapascals.

ANALYTICAL RESULTS

Component	Requested Concentration	Actual Concentration	Protocol Method	Total Relative Uncertainty	Assay Dates
NOX	3000 PPM	2997 PPM	G1	+/- 0.7% NIST Traceable	10/24/2022, 10/31/2022
CARBON MONOXIDE	3000 PPM	3019 PPM	G1	+/- 1.4% NIST Traceable	10/24/2022
NITRIC OXIDE	3000 PPM	2997 PPM	G1	+/- 0.7% NIST Traceable	10/24/2022, 10/31/2022
NITROGEN	Balance				

CALIBRATION STANDARDS

Type	Lot ID	Cylinder No	Concentration	Uncertainty	Expiration Date
NTRM	08012232	KAL004628	2466 PPM CARBON MONOXIDE/NITROGEN	+/- 0.5%	May 09, 2024
NTRM	KAL003318	KAL003318	3456 PPM NITRIC OXIDE/NITROGEN	+/- 0.4%	Jun 05, 2023
GMIS	153401021102	ND73010	5.022 PPM NITROGEN DIOXIDE/AIR	+/- 1.6%	Jun 15, 2025

Utilities & Infrastructure
Operations Procedure

SERF Sigma Basin SMI 120F Evaporator Inspections

1 Purpose

The purpose of this procedure is to provide instructions for inspecting and removing scale and debris from SMI Evaporative Solutions 120F Floating Mechanical Evaporators used at SERF evaporation ponds at TA-60-0221/0222 on Sigma Mesa.

2 Scope/Applicability

1. The procedure includes inspecting evaporator housings and pump sleeves for scale, inspecting fan blades for wear, removing scale, removing obstructions, and cleaning evaporator pump static inlet filters.
2. Affected personnel: SERF Operations and other personnel

3 Prerequisites

1. Required training and qualifications:
   a. Utilities & Infrastructure (UIDO) procedures and work control processes
   b. Current procedure, equipment, supplies, etc.
   c. P101-3, Lockout/Tagout for Hazardous Energy Control
2. Pre-job briefing

4 Precautions and Limitations

1. Required Personal Protective Equipment (PPE)
   - Steel-toe safety shoes
   - Safety glasses with side shields
   - Personal floatation device
2. All procedure hazards, both task and site, must be addressed in accordance with UDO work control processes.
3. Refer to Integrated Work Document (IWD) for specific task and site hazards.
4. Lockout/tagout (LO/TO) must be performed per P101-3, Lockout/Tagout for Hazardous Energy Control.

5 Equipment, Supplies, etc.

1. Equipment, tools, instruments:
   - Pressure washer
   - Power generator
   - Pump
   - Flat and/or combination screwdriver
   - Hand tools
   - Flashlight

6 Responsibilities

1. Persons performing this procedure are responsible for –
   - Complying with its requirements
   - Notifying appropriate supervisory personnel of equipment damage or other conditions that could require corrective action
   - Issuing a PAUSE/STOP WORK order whenever warranted by conditions related to health or safety in accordance with P101-18, Procedure for Pause/Stop Work
2. Managers are responsible for ensuring procedure compliance.

7 Work Steps

7.1 General Items

1. Schedule performance of the procedure in coordination with SERF Operations.
   - Inform affected personnel when the inspection process is about to begin.
2. Make sure evaporators are operational.

   If an evaporator is out of service, record the following information in SERF Operator Log:
   - Reason out of service
   - Submitted Work Order/FSR number

     if MSS repair

7.2 Perform Inspections

Perform inspections yearly.

1. Turn evaporators OFF.
2. Apply LO/TO per P101-3, Lockout/Tagout for Hazardous Energy Control.
3. Remove evaporators from ponds using tethering cable.
    - Inspect cables for tear or excessive jacket wear.
4. Inspect exterior of evaporators for scale build-up.
    - Use pressure washer to remove scale.
5. Inspect fan blades for wear.
    - Note that the blades are not sharp.
    - Notify appropriate personnel of excessive wear.
6. Inspect pump sleeves through viewing port for obstructions and scale build-up.
    - Remove any obstructions.
    - Use pressure washer to remove scale.
7. Remove static inlet filters from pumps and clean them.
8. Reinstall cleaned static inlet filters.
9. Return evaporators and tethering cables where they came from in pond.
10. Remove LO/TO.
11. Turn evaporators ON and check for normal operation.
12. If a problem is found, immediately notify appropriate personnel so corrective action can be taken.

8 Records

Records generated as a result of implementing this procedure are maintained in accordance with the UI-DO records program.
